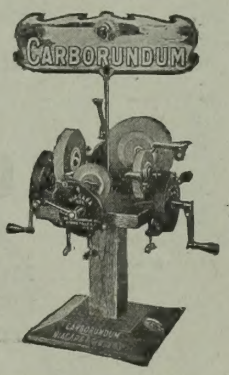
Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.



The Western Clock Co., La Salle, Ill.

There is a Grinding Need In Every Household, Hotel, Repair Shop and Garage for a

CARBORUNDUM NIAGARA GRINDER

Every machine is equipped with a Carborundum wheel—the wheel that cuts fast, clean and cool—every machine is mechanically perfect—castings strong, durable—gears perfectly cut, smooth running, uniform—Carborundum Niagara Grinders are assembled under the strictest supervision—every part is machined right—put together right. The machines are handsomely finished in brown enamel—all small parts nickel-plated—It is a machine that will appeal to anyone who has any tool grinding to do—Write for the details of our free grinder display stand offer—The Carborundum Grinder stand is a great sales booster.

Are you a Carborundum Dealer? Let us tell you about our sales co-operation plans.

THE CARBORUNDUM CO.

NIAGARA FALLS, NEW YORK

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.

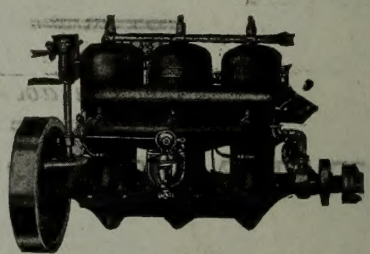
Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awkae dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

WEAR-EVER
NA ALUMINUM CO LTD
TRADE MARK

"Wear-Ever" Aluminum Ware

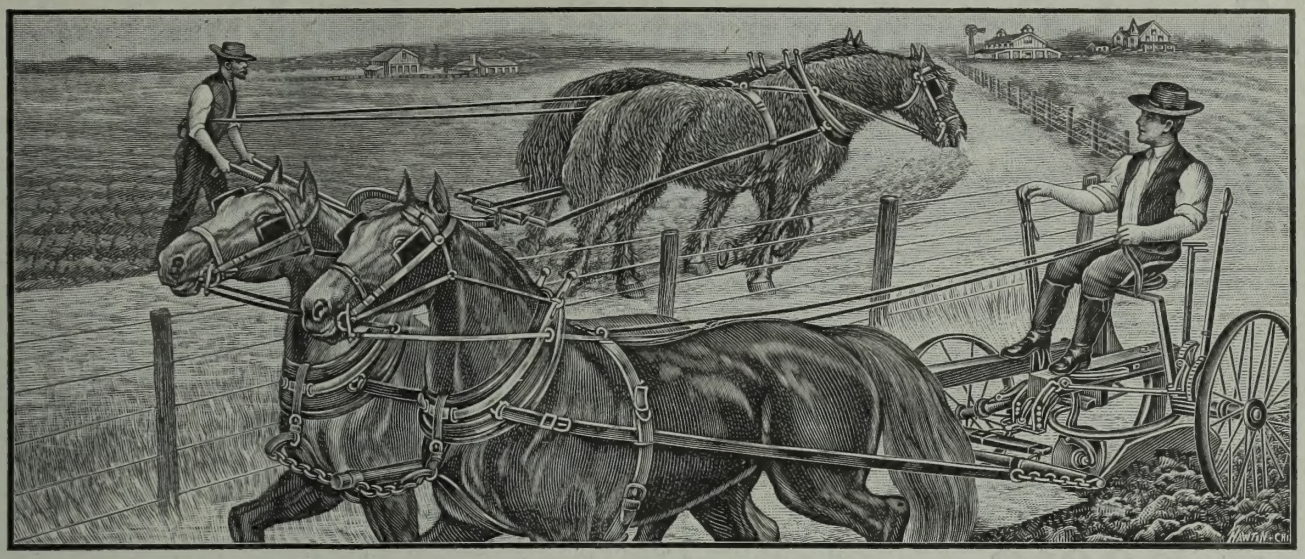
"No! They are not all the same."

"Wear-Ever" Aluminum Utensils *are different.*

Of course, aluminum is aluminum; but utensils may differ in thickness, in handles, in finish.

Thickness. They are made thick enough to prevent denting readily; thick enough to guarantee a lifetime of satisfactory service.

Handles. The handles of **"Wear-Ever"** utensils are made of the best tinned steel. Aluminum handles would become too hot—wooden handles would burn off or break. The handles of **"Wear-Ever"** utensils are gripped to the utensils by aluminum rivets with large heads. The heads are not sunk into the side of the utensil—the side remains of uniform thickness, strong enough to hold the handle on firmly for years.



Finish. The outside is polished. The inside is hardened by an electrical process which makes the metal harder, smoother, less liable to be discolored by food or water containing alkali or iron, and more easily cleaned than would be possible if the utensils were not so finished.

Replace utensils that wear out with utensils that "Wear-Ever"

A CONTRAST

There is no Fraud or Deception About the

Stewart Clipping Machines

No Sham—No Pretense—No Imitation. They Are Genuine in Conception and Quality.

When you sell Stewart Clipping Machines, your customers and yourself are backed by the guarantee of the largest establishment in the world making clipping machines. We guarantee every Stewart machine to satisfy the user or we will rufund his money.

No imitator of Stewart Machines has ever offered so strong a guarantee because the imitations are inferior in quality.

Order from your jobber and write for our big new 1912 catalogue.

Business Pirates Find Little Favor with Upright Merchants

The Captain Kidds of Commerce who seek to trade upon an honest manufacturers' reputation by inferior imitations, should have no place in the modern business world.

Handle the genuine Stewart Machines to make pleased customers.

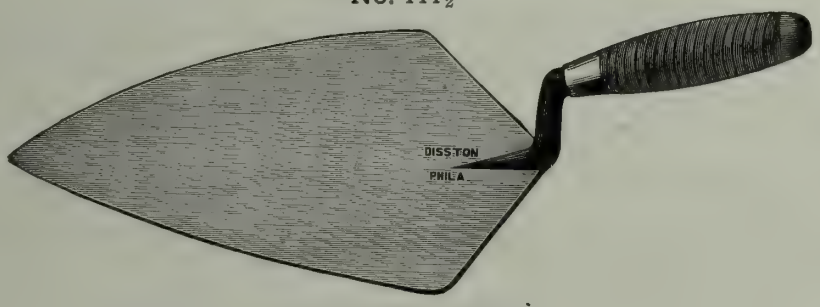
DISSTON TROWELS



Some users preferring the New York Pattern Brick Trowels with handle having a solid wood end, instead of through riveted tang, we have made up the Nos. 11½ and 111½ to meet these requirements.

No. 11½

REGULAR GRIP

No. 111½

LEATHER GRIP

We shall, of course, continue making the Nos. 11 and 111 patterns, which differ only in having the through riveted tang. Each number made with the LIFT or hang at three different heights.

Our purpose is to furnish the goods wanted and of a quality that will give perfect satisfaction.

The Mark That Stands For
The Best in Rope

The Facts About Rope

Why not consider some of the common-sense reasons why PLYMOUTH Manila rope is a good investment for you — a profit-maker in every sense of the word? These facts have started hardwaremen thinking:

PLYMOUTH ROPE

"The Rope You Can Trust"

1st. *Gives more pounds of satisfaction to an ounce of weight than any other rope made.* Isn't it reasonable to expect that when a rope gives good value for the money, the buyer will come back for more?

2nd. *Outlasts all other ropes.* When the marked durability of rope will convince buyers that they want no other, isn't their steady trade fairly well assured?

3rd. *Is the best possible advertisement.* When you get the reputation of handling a *very fine rope*, isn't it natural that you get customers that would otherwise go elsewhere?

Is it good business to offer your customers cheap rope when you know that PLYMOUTH Manila gives them more for their money and at the same time helps to "boost" your trade? Why not ask your jobber to send you PLYMOUTH next time?

LOWER DOOR CHECK

The "LE PAGE" Patent OIL DOOR CHECK and SPRING

is a marvel of simplicity and has a mechanical action that is perfect.

It is the only door check made without packing in its working parts, which assures absolute freedom from packing friction.

The door on which this device is used cannot slam, as the oil in the spring cup of the check forms a cushion, which keeps the door under perfect control and allows it to close quietly.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumbscrew at the right.

The bearings are long and the spindle, with crank at lower end, is drop-forged from cold rolled steel.

Toronto public schools, Simpson's, Eaton's, etc., use this door check exclusively.

Write for circular and prices.

WM. KEATING

266 MACDONALD AVE. TORONTO

"ONWARD" VACUUM CLEANERS

HAND POWER

are machines upon which every dealer can absolutely rely to sell well and bring him good profits.

You run no risk when buying from us, as a written guarantee of perfect service accompanies every cleaner.

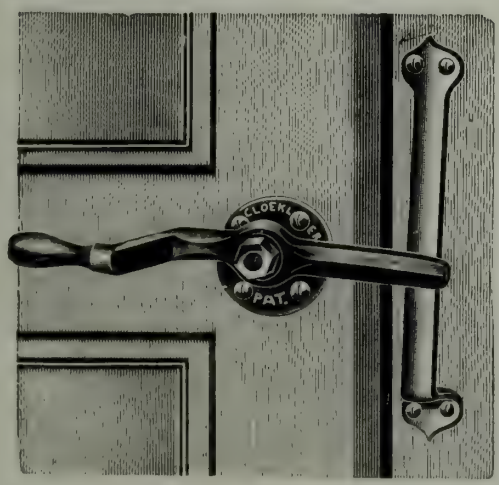
The following descriptive matter will give you an idea of their quality.

THE "DOUBLE TANK" MEANS LESS WORK

The double tank device (an exclusive feature of the Onward Automatic Hand Power Vacuum Cleaner) separates 95 per cent. of the dust from the air without the use of screens, baffles or water. Only 5 per cent. of the dust is screened, which means that the screening device offers but 5 per cent. resistance to the pump. This machine is the easiest to pump and the easiest to empty, as the reare no complicated screens as in other cleaners.

It has the greatest air displacement because the pump is one-third larger than any other. This gives it a more powerful suction and a strong blow. (This is the only hand machine that blows as well as sucks.)

Do not be deceived by any other claimed to be just as good as the "Onward Hand Power."



Made of malleable iron and steel, it will last an ordinary lifetime.

WRITE FOR OUR NEW 20 PAGE ILLUSTRATED CATALOGUE DESCRIBING OUR HAND, ELECTRIC AND STATIONARY VACUUM CLEANING MACHINES.

Gloekler's Patent Refrigerator Door Fasteners

Forcing Door Open

Showing Door Forced Shut

THIS fastener has been the standard for Refrigerator Doors and cold storage work ever since it has been on the market, and, especially for heavy work, is without an equal. It is made heavy and substantial with nothing about it to break or wear out, and will "last a lifetime." Simple and easy to operate. In closing door, turn lever inside keeper and press down on handle, which seals the door absolutely tight with little effort. To open door, turn handle around until lever comes outside of keeper and lift on handle, which will force the door open without any effort, no matter how tightly jammed.

We also make a line of Spring Fasteners, Hinges, etc., in tinned, brass and nickel plated. Write for illustrated price list.

All Bits May Look Alike to You

but there's as much difference between the FORD and ordinary bits as there is between Black and White.

It is unquestionably the finest Bit ever made. No other bit CAN bore as rapid, no other Bit DOES bore as smooth and no other bit has the "accurate to the fraction of an inch" clean cutting qualities the FORD possesses.

FORD BITS will bore straight through the hardest knots

without turning off the least. The FORD Patented Concave Twist is a marvel. As it works it throws all borings to the centre, thus insuring a free, easy action from the moment the screw point starts until it bores out.

Enthusiastic Ford Users have termed it "The Twist that saves the wrist" and once you try a Ford you'll agree that it does save many a twist, bores as easy again and leaves a smoother hole than any bit you ever used.

Progressive dealers everywhere sell this money saving, labor saving bit. Insist upon the FORD—each one fully guaranteed.

Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.

How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

The Cooker that Takes and Holds the Leadership

"IDEAL" FIRELESS COOK STOVES

have the merit that makes them the choice of every buyer—man or woman. Superiority of construction appeals to the mechanical mind—handsome appearance appeals to the artistic mind—the ability of the Cooker to *imprison the heat* and establish a positive cooking unit appeals to the scientific mind—their better cooking, and money saving, time and labor saving qualities appeal to all. You can prove the superiority of the "IDEAL" from any angle of argument.

Triplicate Pails of Pure Aluminum — Seamless —Self-Locking Covers.

Another "Ideal" triumph. It's what the people have hoped for—a three-set aluminum utensil that would permit cooking several things at one time in one compartment over *one* radiator of a fireless cooker —any kind. Also splendid over one burner of oil or gas stove. Each pail has capacity for two quarts. Three together, 9½ inches in diameter.

Lined with Pure Aluminum

There is nothing about an "IDEAL" to "handle with care" —the lining being *Pure Aluminum* the cooking compartment will not crack, chip, flake or peel. Will not rust, corrode, pinhole.

The "Water Seal" Top

Our invention—is the final perfection of Fireless Cooker construction. It *prevents* the heat escaping, therefore the "IDEAL" cooks better, faster and keeps the food hot longer. It ROASTS—BAKES—STEAMS—STEWS—BOILS better than a stove—better than any other cooking device.

Dealers write for catalog, wholesale prices, etc.

Planning The Garden Tool Campaign

A Suggestion for a Window Display of Garden Tools.

Ambition to Grow Things Stirs Nine Men Out of Ten in Early Spring—There Will Be a Heavy Demand for Gardening Tools and the Hardwareman Should Be Prepared to Get His Share of it—The Handling of Seeds Helps.

It may be an inherent desire for fresh air and exercise; it may be a mild form of atavism which brings about a "throw back" to the primeval instinct for tilling the soil. Whatever the reason may be, the fact remains that nine men out of ten have an unappeasable desire to keep a garden. The mechanic who works hard all day seems to find relief in handling a spade and hoe at night. The jaded business man forgets his troubles in an absorbing devotion of his spring and summer evenings to the frequently impossible task of raising flowers and vegetables from a four by ten plot of arid city soil. The ambition to grow things is not limited to any class, nationality or section.

Perhaps, no pursuit is more generally indulged in or more persistently pursued. The amateur gardener has an unquenchable ambition, and he can't be discouraged. Year after year he struggles with the problem of raising radishes and beets from soil composed of three parts ashes and one part gravel. The meagre results do not discourage him.

An enthusiast seldom counts the cost. The writer has known men who were stingy and grasping to the last degree in everything else, spend $20 or thereabouts on tools, seeds, manure and other garden necessities; and they haven't been discouraged when the sole result of that expenditure has been a row of withered lettuce, half a dozen stunted carrots and a handful of fireproof beets.

The object of this rather lengthly preamble is to establish the fact—which probably does not need to be established, after all—that the spring brings a heavy demand for everything pertaining to garden culture, and that it is clearly "up to" the hardware dealer to make the most of this profitable trade. Before proceeding to elaborate that point, another digression will be necessary.

An impression exists among certain dealers—it is pretty general, in fact—that regular lines sell themselves and that it is only necessary to feature the specialties, the new goods and the highest priced articles. Here is how one hardware man expressed it recently:—

"There is always a demand for straight hardware, you see. I know that people need nails, hammers, shovels, pots and pans. They know where to come when they need them. Consequently I take business in staple lines as it comes and devote all my time to looking after the side lines, which need all the attention I can give them."

Another dealer makes the remark:—"I never put the kind of goods in the store window that everyone knows can be bought here. I use the goods which people will not be so sure of. Besides, you can't make an attractive display of plain hardware goods."

Both men are sadly mistaken. The demand for ordinary hardware lines is not of such a fixed quantity that it cannot be increased by live methods or lessened by the neglect of the dealer. Hardware is the same as everything else in this respect. Demand is stimulated or checked according to the methods adopted by the dealer in placing his goods before the public. The hardwareman who simply keeps staple lines in stock and makes no attempt at advertisement or display, gets only the demand which arises from sheer necessity; in other words the minimum.

It is quite as erroneous to suppose that staple hardware lines cannot be used for display purposes as well as specialties and household goods. Arrange a display of tools, of builders' hardware, of farm supplies, and watch the interest it will create among the "men folk." A practical window will prove just about as effective in point of sales as an artistically arranged display of more catchy goods.

Which brings us back to the question of garden tools. The hardwareman should not take it for granted that there will be a certain demand for tools, and wait for the customers to come in. He should proceed to push that line and kindred lines for all they are worth. He can increase his sales in direct proportion to the effort that he puts forth.

Don't Forget to Advertise.

In the first place, he should advertise. It never pays to underestimate the value of suggestion. Mr. Suburban

Resident is suffering from the restlessness which spring engenders. It is too nice to stay in the house in the evenings, but too chilly to sit out. He has no place particular to go. How is he going to occupy his evenings? If suggestion, in the shape of an advertisement in his evening newspaper, calls his attention to the superior quality and cheapness of garden tools at Jones' hardware store, he gets the gardening fever again. Witness Mr. S. R. making his way to Jones' hardware store for the necessary tools, feeling quite cheerful because he has found some way to allay his restless desire for something to do.

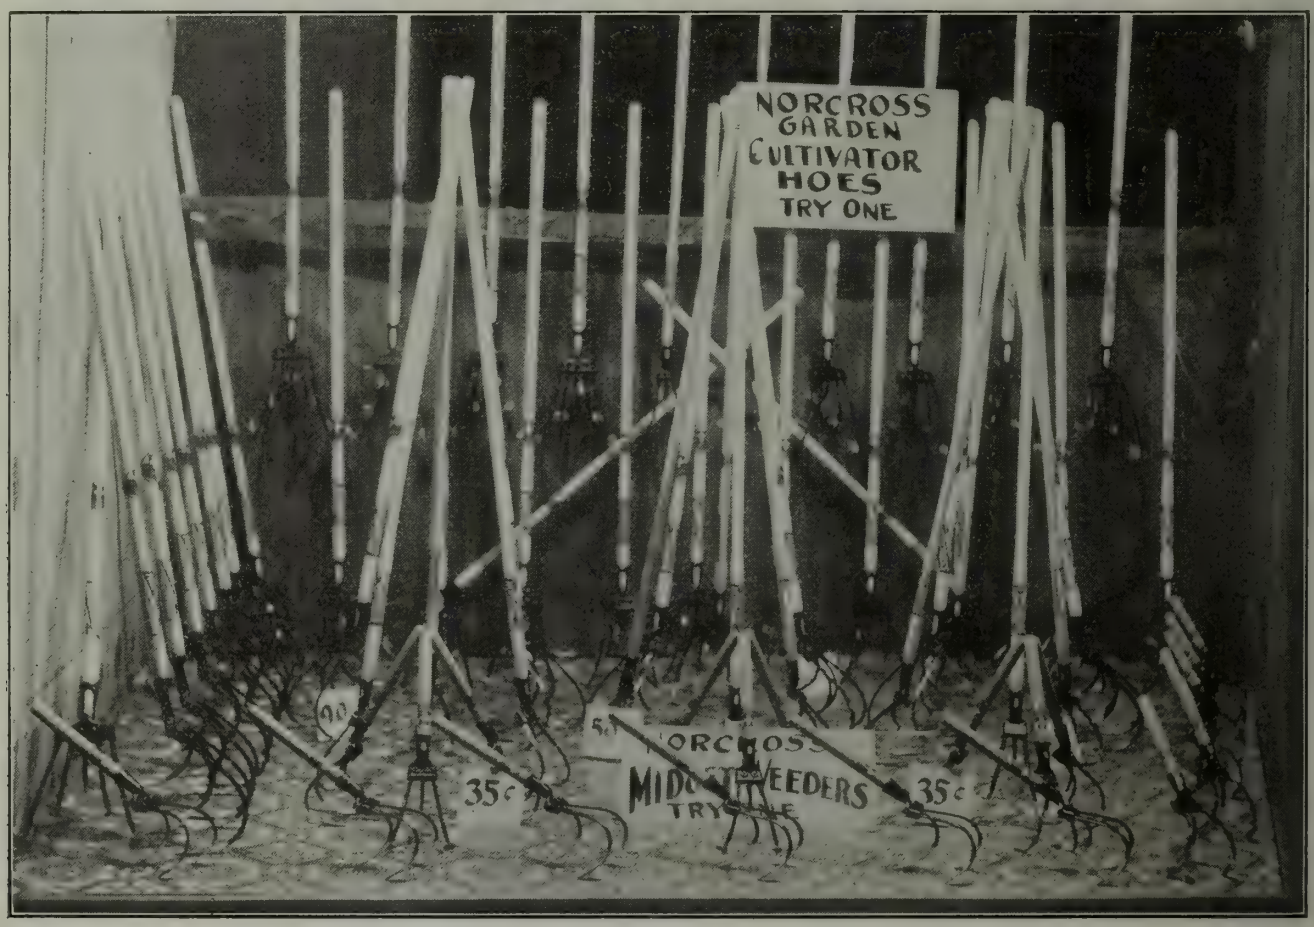
Advertising is not a more necessary feature of the campaign than suitable display in the store and in the store windows. The power of suggestion is forcibly exerted by a good window trim. An illustration is herewith presented of a display of garden tools shown in the window of a hardware store for the space of one week with strikingly good results. It will be noted that no device was used other than to merely place a good assortment of various sizes in the window. It was a display with a purely practical appeal and as such brought ample returns.

It is desired, however, to make a display with scenic qualities, designed to attract attention, it is not hard to strike an idea which would be in keeping with the nature of the goods.

The window display suggested in the accompanying drawing may appear at first glance to be rather more elaborate than the average window dresser cares to attempt. In reality, it can be arranged with little expense and not a great deal of trouble. The posts on each side of the gateway are the only solid parts of the background. The rest is made of muslin, or some similar material, stretched over a framework and kalsomined to represent bricks, a reddish yellow striped with white being the best color combination. The scenery can also be done with kalsomine but, if the window dresser does not feel that his artistic capabilities are equal to it, this part can be dispensed with entirely.

The placing of flower pots on the top of each of the posts lends a realistic and at the same time softening effect. The sketch as shown provides for a window about 20 feet wide, but the arrangement could be altered to suit any width.

Who will deny that there are possibilities for striking window displays in garden tools?



Offer Complete Equipment.

Some dealers get first-class results by offering complete equipments of garden tools. They get together a collection of articles which are needed in gardening, ranging from a wheelbarrow to a trowel, and offer the assortment at a certain figure. They make a reduction in the price on account of the large number of articles included, and as an inducement for customers to purchase a complete outfit.

It pays to have a proposition of this kind to offer. A customer enters to buy some one article and the dealer finds out that he lacks one or two other necessary tools. "You will need a trowel and a rake," the dealer states. "By the way, I am offering a complete equipment here at a figure which certainly makes it worth your while to lay in the lot. It's a bargain and it will make your gardening work doubly easy. A man can't do really good work without the tools, you know."

It makes a splendid talking point, and has been known to bring large sales during the spring season.

Another important consideration is the handling of seeds. The amateur gardener may be willing to worry along with a broken-backed spade and a superannuated rake but there is one commodity he must purchase, and that is seeds. If he goes to a feed store for his supply, the necessity of buying new

A Window Display With a Practical Appeal—This Window Brought Splendid Results.

tools will never be presented to him. If, on the other hand, he buys the seeds at a hardware store, the clerk can soon get out of him the fact that he needs new tools and the chances are that he will make a purchase or two. This is a strong reason why hardwaremen should handle seeds. The trade leads to other business.

The case is recalled of a hardware dealer, who conducted a most energetic seed campaign one spring. He put seeds in the window, used all his advertising space to talk seeds, offering price inducements which brought every farmer and city householder to the store. He sold a tremendous amount, and lost money on it.

But he had a record sale of implements and tools, and the profit made in these lines more than compensated him for what he had lost on the seeds. The seed sale, in fact, was more or less of a "blind" to bring people to the store and pave the way to a profitable trade in tools and other supplies. It paid the dealer, and he has repeated the idea every spring since.

It would not do to dismiss the subject without a word as to the farm trade.

The farmer needs a great variety of tools in the spring, and it pays the hardware dealer to keep in touch with him through the weekly newspapers and by special efforts to capture the market day trade.

By "Mack."

Something upon which I pondered this week after reading a volume written by a well-known authority on business and social success, was the importance of his chapter relating to fear.

Almost any of us may be qualified by experience to claim a somewhat intimate acquaintance with this emotion in some form. I shall assert that possibly no more acute manifestation of fear shows itself in our daily round of living that in the misgivings entailed in our efforts to attain success.

People who are familiar with the shifting conditions of a modern business know how quickly unforeseen reverses may occur.

A sudden depression in the market price of some staple may find us with extra stock unsold, and the germ of fear of loss dominates the mind.

Generally speaking, when we anticipate losing anything a pessimistic condition is set up that is difficult to overcome. Failure and loss are almost certain unless we succeed in re-establishing hope.

I could enumerate a long list of business worries or fears but only one probable assumes the chief place in the catagory. It is foredooming oneself to failure if persisted in fostering while engaged in business.

The retail hardware man who feels a lack of confidence either in his goods or capacity to exchange his wares for money has, in my view, fused all his fears into the one most insidious form of apprehension.

The fears that sales are going to be lost.

This feeling progresses until it is extended in such a manner that the clerk's efforts to sell their customers fall under its influence, and much wasted energy results.

Many times these fears may be shown to be only imaginary. Goods fluctuate in value and rise again to our ultimate profit; therefore, we had no cause to believe in the ogre of ruin being at the store door.

Also it can be shown that your goods and prices are fair and really the equal of any competitor.

The remedy lies in readjusting our own mental balance and resting our faith on our own ability.

We hear quite frequently of slaves to business and not often enough of the masters of it.

Be a Master.

Advances Made in Glass Prices

The Margin of Profit Has Been Small for Some Time Past, and the Increased Cost of Glass, Due to English Coal Strike, Made Upward Revision of Prices Necessary.

Montreal, Que.—Glass has taken a bound upward in the last week. That there would be an advance has been predicted for some time, but it was not known that the rise would be one of from 10 to 15 per cent. However, there is a cause for this—and that cause is not greed. At least it is not greed on the part of the handlers.

This advance may apparently be attributed to two things. One, the low price at which glass has been selling for some time now. The other, the English coal strike.

From what can be learned, it is evident that glass has been handled of late at a very narrow margin of profit. So, when the English coal strike began to cause trouble, it at once became apparent that there would have to be an upward revision of prices. It could not be otherwise. The handlers had to pay for their glass, and they had to commence selling this glass very shortly, since the interference with shipping caused by the strike has greatly reduced the stocks.

Since they were selling glass which was costing more, the handlers had to charge more for it. Had their previous profit been large this would not have been immediately necessary, but when business was previously carried on upon a narrow margin of profit there was no alternative.

At a meeting held last week, therefore, it was determined to strike a higher rate on all classes of glass. That this rate will remain in force for some time is generally believed. "There may be a drop in four or five months," remarked one handler. "It is doubtful if this will come, though, and it is certain the drop will not be large, for the business carried on upon the old lines was unprofitable."

The new rates struck are as follows:

Star.

Break	Price
1	$3.05
2	3.25
3	3.65
4	3.90
5	4.15
6	4.65
7	5.10

Double Diamond.

Break	Price
1	$4.40
2	4.75
3	5.55
4	6.00
5	6.50
6	7.00
7	7.85
8	9.10
9	9.90
10	11.00

These prices refer to Montreal and district. The Toronto price list is the same as formerly, but the discounts are 25 and 30 per cent. for proved specifications.

A REVIEW OF BUSINESS PROSPECTTS.

The general outlook at the present time in Canada is very bright. Business in all lines and in all sections is good. In fact, there is every promise that in some branches of industry, the year 1912 will be a record one. This is true of hardware and kindred lines. From present indications more hardware will be sold than in any previous year.

A feeling of complete confidence is manifested among manufacturers, wholesalers and retailers alike. They can see sure evidences of prosperity, coupled with growing demands, and are planning to meet the resultant increase in trade. Nineteen twelve should prove a splendid year for the hardwareman.

The prosperity of the country as a whole depends in no small degree on conditions in the west. While opinions differ to some extent, there is every reason to believe that the western provinces are striking a record gait. A contemporary makes the significant statement that, "there has been considerable activity in placing fall business for some weeks, and if seeding will be completed without any serious mishap there is no doubt that the demand for merchandise for the next season will be by far the largest in the history of the country. Each week sees the volume of building operations in the west loom larger."

Another satisfactory feature, bearing on the prospects for a busy year, is the fact that collections have improved. Money is easier and in freer circulation, thus pointing not only to brisk business conditions, but to the existence of a pretty general feeling of confidence.

MAKING THE STORE ATTRACTIVE.

No one likes to think of winter more than is necessary at this season when the trees are commencing to show some signs of renewed life. Thoughts are all of the summer, yet memories of the cold weather may give the progressive merchant some ideas which will enable him to make his store attractive during the hot months.

In winter every dealer saw to it that his store was well heated. Some had steam heating plants. Some secured warmth by hot air furnaces. Some used big heaters placed on the floor of the store. But though the method differed, the result secured was always the same. The store was kept warm and pleasant.

In the months to come the opposite result is to be striven after. The thing is to keep the store cool, so that passers-by will be attracted and will want to drop in. Some dealers—a large number—have secured this result by means of electric fans placed at various points in the store. It keeps the store cool, thus encouraging people to enter; it also lets those who do enter see the fans in action. "Delightfully cool in here," a woman will remark. "Those fans do give a refreshing breeze." She will compare her own hot kitchen with that store, and the comparison will probably result in this question: "How much does such a fan as you have there, cost?"

It is a great thing to make a store attractive. One dealer, in the north, went so far last summer as to have a large pitcher of lemonade standing on his counter, that all might quench their thirst. He, in this way, helped make his store popular, and the summer visitors went there whenever they wanted any fishing tackle, or any of the articles which are continually in demand about a camp. A man who by making his store attractive, can also make it suggest purchases, is achieving a great end. He is doing that exceedingly difficult thing, killing two birds with the one stone.

THE CO-OPERATION OF THE MANUFACTURER.

This is the day of co-operation. We have come to realize that it pays to work in concert with others. We can accomplish a great deal when we avail ourselves of the assistance of others when alone the task would prove impossible. In the field of commerce it does not pay to plow a lone furrow.

In the hardware business, there must be co-operation between the manufacturer, the wholesaler and the retailer, if the best results are desired. If the manufacturer neglects to do his part, the sales of the retailer will suffer. If the dealer fails to live up to his responsibilities, the manufacturer finds that his output is restricted.

The duty of he manufacturer does not stop when he has sold a bill of goods to the dealer. It devolves upon him to give the dealer all information needed to handle those goods to the best advantage, and further, to give assistance in selling the goods by creating a demand for them.

The duty of the retailer is to avail himself of the help of the manufacturer in every possible way. He should endeavor to learn all that he can about the goods that he handles. He should watch the advertising of the manufacturer, and take advantage of it to push sales in his territory of articles which are being familiarized to the public.

Working together the retailer and the manufacturer can accomplish a great deal. The failure of the one to live up to his responsibilities, can sometimes almost minimize the efforts of the other.

It is a fact that many dealers do not endeavor to take advantage of the assistance proffered by the manufacturer. By their neglect, they are missing splendid opportunities for increasing their trade.

EFFICIENCY IN SELLING.

"Any fool can take a horse to water," it is said, "but it takes a wise man to make it drink." The saying is correct, except in one particular, that is the reference to the fool. Any fool cannot take a horse to water. It takes a man with considerable common sense and tact to do even that with some horses.

Certainly it takes a wise man to attract customers into a store, and it takes a still wiser man to make them buy. A salesman has need of the very highest qualities of tact and persuasion. A good salesman must know two things well—the article he is trying to sell and the person he is trying to sell it to. Often there is to be seen the sad, sad spectacle of a clerk trying to sell a round plug for a square hole. So much waste energy that. Just waste energy.

Conservation is the cry of the age, and there is as much need to conserve energy as anything else. Conserve it and apply it properly. It is useless to attempt to sell a ten dollar tool to a two dollar mechanic. There is no wisdom in offering a laboring man a fifty dollar gas range. "Talk quality" is a fine maxim, but every maxim has to be tempered with common sense.

Efficiency is wanted, and efficiency is that which enables a purpose to be accomplished. If the purpose is to make a sale the salesman will do well to remember that the first necessity is to size up the wants and the means of his customer; then he may present in his most attractive way the goods which will appeal to that man.

THE RESTRICTIONS OF CREDITS.

The foundation for many big credit accounts is laid in the spring. The farmer has not a great deal of ready cash after the winter's inactivity, and is not always in a position to pay for what he requires. And his requirements in the spring are heavy. The result is that, starting about the present time, accounts are begun with the hardwaremen, on which settlement is problematical before the crops are threshed.

A word of warning may not be amiss. Although the agricultural customer can be relied upon to pay up in time, he can often be pretty slow, and the hardwareman may be seriously hampered if the amount of money outstanding is allowed to reach unduly large proportions. Customers who are slow, but are certain to pay in time, can often wreck a business. It is well, therefore, to exercise considerable caution in the matter of credit extension. Dealers should see to it that the amount of money outstanding is not allowed to exceed a safe margin (if such a thing exists), and, to insure this, they should carefully supervise personal accounts, making sure that no customer is allowed to get too deeply into the debt of the firm.

POINTED EDITORIALS.

Goods, like talents, should never be hidden under a bushel.

* * *

The automobile is rapidly coming into favor for retail delivery.

* * *

The price of glass has gone up. The advance is fully warranted in view of trade conditions.

* * *

Wallpaper is finding ready sales at present. It is a good time to bring this line well forward.

* * *

"Make your store attractive" is perhaps the very best advice which could be given the hardwareman at this juncture.

The paint trade is one exception to prove the rule that everything comes to him who waits. The dealer who waits is liable to be kept waiting a long time.

* * *

This is a good time to bring lawn mowers and garden tools into the window. Those who have lawns and gardens are thinking of them now.

* * *

Kitchen ware displays, wherever made, are attracting attention. The spring fever seems to be contemporaneous with a demand for these lines.

* * *

The June bride will soon be here. It is time that dealers should bring forward a variety of goods which will make suitable presents for her.

* * *

Efficiency is required in salesmanship as in everything else. Energy, tact and perception are the three qualities which go to make up efficiency in this respect.

* * *

It has been co-operation between all classes of business men which has made possible the wonderful commercial and industrial development of late years.

* * *

Wholesale houses are experiencing some difficulty in getting men at all skilled in hardware. At present there appear to be more positions than there are competent men to fill them.

* * *

The rapid development of the country is indicated in no surer way than by the increased consumption of metals. So heavy has the demand become that shortages of a more or less serious nature have developed in a number of lines recently.

* * *

Some fetching samples of hardware millinery were shown in the window of the Abercrombie Hardware Co., Vancouver. The hats designed are quite as attractive as some we have seen in millinery stores, and they would certainly have the wearing qualities.

* * *

May first is the recognized moving day in most cities, and stove dealers are urging their patrons to make their purchases early, so that they may be sure of securing their range without any delay. Such advertising hits every one who is contemplating a move.

* * *

"Mack," our retired hardwareman, whose reflections are perused each week by Hardware and Metal readers, hints that there is something in the old age theory of Osler after all. We don't agree with Mack. Some of the most aggressive and up-to-date hardwaremen we have ever met will never see sixty again. We have in mind one dealer who thinks of a new idea every day in the year and he is getting close to three score years and ten.

* * *

The Titanic, the most gigantic and powerful machine that man had ever turned out, collided with one of the thousands of icebergs which drift down from the north each season, and the wreck of the man-made monster resulted. What a striking manifestation of the wonderful powers of nature!

Be Prepared for Wedding Present Trade

The Hardware Store of To-day Can Really Offer a Better Selection of Suitable Articles than any other Establishment—There can be Purchased the Useful Gifts, and How They Are Appreciated—There can be Bought the Casseroles, the Cut Glass, and the Solid Brass Goods which Are Ornaments, Not for the Day, but for Many Years.

Soon the small town papers will be bringing out that old headline, "Marriage Bells." The "June Weddings" line will also be popular, for the season of marriages is approaching. Even before June there will be a number of weddings, but with that month will commence the annual matrimonial boom, which will mean the buying of many wedding presents and the making of much money by those who display the class of goods suitable for gifts.

There was a time, oh a number of years ago, when hardware stores pursued the even tenor of their way, irrespective of such events as weddings. What had they to do with affairs of this kind They were to supply the stern realities of life—the articles needed for building or for repairing. They met the every day needs of the men, but nothing had they which appealed to woman in her softer moments. They had pots and pans, but none of those finer goods—the dishes which placed upon the dining room table add to, rather than detract from the daintiness of its appearance.

Great Change of Late.

But now there has come a change—the only lamentable thing is that it is not yet a complete change. There are yet dealers who do not carry the many lines which are in demand at the Christmas season and at this approaching time of weddings. Some do not carry them of a purpose. They prefer to specialize on other lines. But still other dealers neglect these specialties because they have not seriously considered them as money makers. They have time and space to give to such goods, but they have never seriously thought of adding them to their stock. Still others there are who have contented themselves with one or two specialties. It would seem they might well broaden out, for others have made money from carrying a wide selection, and there seems no reason to suppose that they might not do the same.

Demand for the Practical.

The hardware store offers exceedingly practical presents. There is a tendency, of late, to favor such. Young people standing on the verge of matrimony, contemplating the high cost of living and the low cost of giving, feel like sending to their friends a warning. "Kindly omit jewelry and all trinkets, pretty but of no practical use." There is a house or an apartment to be furnished, and there is no denying that wedding presents may help a lot with the furnishing.

But sad as it may seem, the prospective bride and groom can not suggest what is to be given them; but they can hope that the store keepers bring forward the variety of articles which will appeal to them.

There is the carpet sweeper, a present well worth while. It is going to be needed in every home, and while it may not look terribly imposing among the other gifts, it will show that the giver wanted to make a present which would fill a real want. A carpet sweeper will undoubtedly be appreciated, and is a line which might well be brought forward at this season.

Bringing Goods Forward.

But for those who regard carpet sweepers as too prosaic gifts, there are a wide line of other articles from which presents may be selected. To begin with, there is cut glass. It is handled in many hardware stores now, and handled to great advantage. Tumblers, caraffes, knife rests, these and many other articles are to be had. Ornamental they are they, yet not ornamental only. They fill a need— a very actual need—in the newly established household.

Silverware is another class of goods popular at this season. By bringing trays, knives, forks and spoons to the front, trade is at once attracted. It is a fine thing to arrange a silverware window at this season. The advertising helps sent with the line handled may be used, and a trim prepared which will make hundreds pause. Of these who enter many will buy silver — others will see something else which they think even more suitable and will decide for it. But the end will have been achieved by the window.

Better Than Jewelers.

A number of hardwaremen declare that they have worked up a business in silverware which excels that of the jewelers. It is not strange that this should be so, for the hardware men are often able to buy to better advantage than are the jewelers. Also by installing somewhat similar lines, they can attract custom to their silverware counter, and make their silverware department lead people to look at other lines.

Brass ware works along hand in hand with silver. Jardiniers, coal scuttles,

A Splendid Display of Goods Suitable for Wedding Presents by E. A. Whitten, Bracebridge.

book ends, these and many similar articles attract great attention and bring business. Then there are curates—those three deckers so necessary to the growingly popular form of sundry afternoon tea. Brass ware is a splendid line to play up prominently at this season.

Remember the Carvers.

Nor must cutlery be forgotten. A carving set will be absolutely necessary in the new home. A handsome carving set will be a much appreciated gift, and if it is brought to the attention of the distraught present hunter it is sure to exert a strong appeal.

Then there are electrical specialties. A reading lamp or a brass fixture suitable for the top of the piano will to many seem the exact thing wanted. Electric irons, too, are worth keeping before the shoppers. This is a gift which will appeal to women buyers. They realize, as men can not, what an electric iron means in energy saved.

Chafing dishes, spirit lamps of copper, brass or aluminum, these are other things which will appeal strongly to the woman. Such articles are both useful and ornamental. Hardly a week passes but they are needed. They are a constant delight to the bride. And, of course, in bringing forward goods to attract the wedding present trade the dealer must remember that it is the bride who counts. It is the bride that every one wants to please. Will she like this, they ask themselves?

The groom—he is only a necessity to whom no one pays much attention—a sort of accessory before and after the fact.

A Good Window Display.

The accompanying illustration is of a window display of just such goods, designed by E. A. Whitten, of the Whitten Co., Bracebridge.

The background was green paper checked with twisted red crepe paper. About six inches from the wall was a fence and lattice work all in white. On the lattice work were tied knives, forks, spoons, scissors, etc., and in the squares were suspended different pieces of silverware and cut glass that would hang, each neatly priced.

The bottom slanted gradually to the glass, covered with white cheese cloth on which was displayed carvers and all kinds of silverware with price tickets attached.

Traveler's Duty Towards the Retailer

Something Said on Another Side of the Question—It is the Duty of the Good Traveler to do What He can to Further the Interests of Those With Whom He Does Business—Instances Where Travelers Have Been of Service to Their Customers and to Their Firms.

Of late there has been a good deal said regarding the duty of the retailer toward the traveler. Something deserved to be said upon this point, for though the majority of merchants have remembered that the golden rule applies to their dealings with the road representatives of the firms from which they buy, a few have overlooked this, But while the retailers have a duty toward the travelers, it must be remembered that the travelers also have a duty towards the retailers, and towards the house which they represent.

A traveler has more to do now-a-days than to sell goods. The man who only goes to those firms from which he knows he can take an order, is not doing the greatest service for his firm. The traveler should be the connecting link between his house, and those with whom his house deals or hopes to deal. He should keep his house before these retailers; sell them goods when he may; and help them in turn to sell the goods. The traveler has more than his own interests to look after. He must look after the interests of his firm, and of the firms to whom he sells. This is necessary from a mere selfish standpoint, for it is only through the advancement of his firm and his firm's customers that the traveler can hope for his own advancement.

Travelers' Great Opportunity.

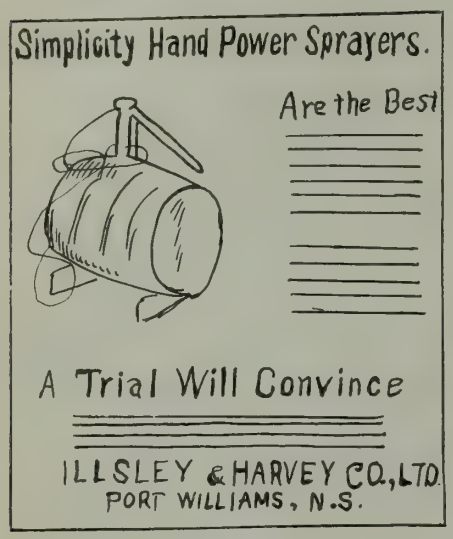
Perhaps no man has it more in his power to help those with whom he does business than has the traveler. Perhaps no man has it more in his power to give useful suggestions to the firm from which he draws his salary.

An instance shows something of the work which an enthusiastic traveler may do for his firm. This happened some little time ago. The traveler was working through Ontario, and on his trips noticed a young man behind the counter in a Hamilton hardware store. The young man impressed him as having considerable ability with his pencil. The traveler reported this at the head office of the firm, and an offer was made to the clerk who shortly moved to the concern's advertising department.

The Sequel.

Thus ended the first chapter, but listen to the sequel. The young man showed more and more ability with his pencil. He arose in the advertising business. He moved from one office of the company to another. He established a reputation among advertising men for the artistic quality and forcefulness of the advertising matter he turned out. For some years now he has been managing this large concern's advertising department, doing good work for himself and his firm.

This young man had ability above the ordinary. Probably he would have come to the front in time without the assistance of that traveler, but the traveler through his watchfulness and interest, both in his firm and in the clerks with whom he came in touch, secured for the young man his start, and for his firm a man who had the capability of developing until he was able to fill a big man's position.



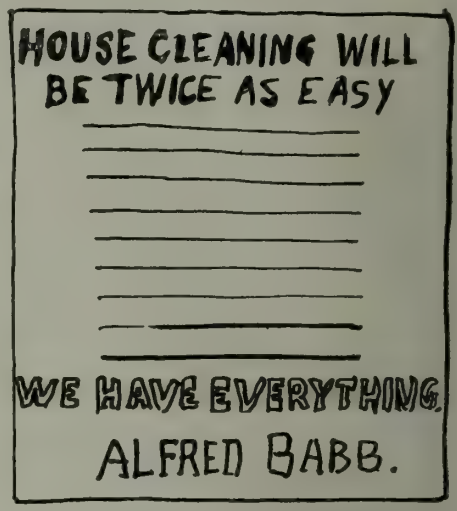
The day has gone when a traveler may enter a store, take an order or two, and move out with a brief expression of thanks. He may not seem to do more than this, but the traveler who is worth while is the one who notes how his customer's business is progressing, and who studies the need of that customer. A traveler to-day is in need of special training that he may be able to represent his firm as well as sell for his firm. It is not for him to silently listen while retailers abuse the firm which he represents. He must investigate the trouble, and see where the fault really lies. He must suggest an adjustment to his house.

"I think a traveler should go to a customer with something worth his attention besides his goods," remarked a sales manager of one of the largest wholesale houses, in speaking on this subject. "He should have a closer touch of certain markets than the retailer can have. He should be able to offer suggestions as to the best time to buy certain lines. He must know, moreover, how to make these suggestions. There is a way of doing this which would be nothing short of impertinence. On the other hand the same thing can be done in a way which will not make any wrong impression upon the retailer, but will convince him that the traveler has his interests at heart."

Criticisms of Some Retail Ads.

Suggestions for the Improvement of the Lay-out in Two Instances — The Wisdom of Quoting Prices—How Illustrations Should and Should Not Be used.

A number of retail hardware advertisements are herewith appended, together with criticisms and suggestions, which may prove of value, not only to the dealers whose advertisements appear, but to all other hardwaremen as well.



An Improved Lay-out Suggested for Ad. No. 1.

No. 1 (3 col. adv.)—Illsley & Harvey Co., Port Williams, have an ad. which has one outstanding quality. It is striking. It cannot be said, however, that the writer showed much idea of the economy of space when he planned his lay-out. A certain amount of white space helps the appearance of an ad. but the extravagance shown in the present instance is not commendable. The lay-out would have been much improved if the idea shown in the accompanying sketch had been followed out. The cut is shoved over to the side, thus making room for the reading matter which appeared under the cut in the original. The space left vacant is open for additional reading matter.

Advertisement No. 2.

An Improved Lay-out Suggested for Ad. No. 2.

This arrangement not only improves the appearance of the ad. very considerably, but has the advantage of leaving more space for reading matter.

No. 2 (2 col. adv.)—Alfred Babb, of Portage La Prairie, deserves credit for having designed a seasonable ad. with a forcible argument to give it point. One serious criticism can be voiced, however. The cut is too big for the space. It monopolizes everything, and the reading matter has to be scrimped into so small a space that it is not easily read.

Advertisement No. 1.

Advertisement No. 3.

We think also that the heading used is not as strong as the first phrase in the reading matter, viz., "House cleaning will be twice as easy."

This ad. would have been better had the cut been left out. Striking though the illustration is, it should not have been used unless the space were considerably enlarged. The lay-out suggested in the accompanying sketch would have been more effective. By eliminating the cut, space is left to suitably "play up" the arguments contained in the reading matter.

No. 3 (3 col. adv.)—M. Weichel & Son, Waterloo, have an ad. here which presents many good points. A commendable feature about the retail advertising of this firm is the continuity of form and lay-out observed. The heading "Weichel's Weekly Store News,"

Advertisement No. 4.

with the phrases, "good goods" and "low prices," bracketed at the side, has become familiar through long usage and, therefore, has a distinct value.

The lay-out is not all that might be desired, but, owing to the size and shape of the cuts, it is probably the only one possible. An improvement could have been effected had some means been taken to separate one cut and the reading matter belonging to it from the other. The rather jumbled and uncertain appearance which the ad. has now would have been avoided in that way.

A creditable feature is the fact that the prices are prominently marked.

No. 4 (2 col. adv.)—Jas. N. McGregor, Oakville, has adopted a style which has many good points. The writer confesses to a predilection for a good length ad. divided off into sections, and each section devoted to one article or line of goods. The idea has not been carried out very well in the present instance. The diversified arrangement of type gives a broken-up appearance to the whole, and the lack of specific statements is a drawback. If uniform headings had been used in each section, and prices had been clearly marked, the selling powers of the ad. would have been increased.

Might we also add that skates, hockey sticks, hand sleighs, et al., are hardly seasonable now?

The printer deserves a reprimand for his treatment of the border in this ad.

Hardware Letter Box

Hygiea Dustless Crayons.

J. A. Steacy, Seeley's Bay.—"Please let me know where I can procure Hygiea Dustless Crayons, also colored crayons for blackboard use."

Geo. M. Hendry Co., 215 Victoria St., Toronto.

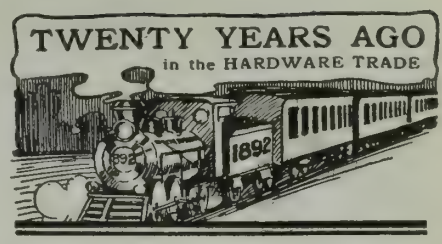
Automatic Centre Punches.

Cochrane Hardware, Limited, Copper Cliff, Ont.—"Please advise us who are the makers of Automatic Centre Punches." L. S. Starrett Co., Athol, Mass.; Browne, Sharpe Mfg. Co., Providence, R. I.

Original Cook Stove Lining.

Jas. Flett, Wiarton, Ont.—"Kindly advise me where I can procure lining for the Original Cook Stove."

Write M. A. Caswell, 380 Queen St. E., Toronto.



Alligator Steel Belt Lacings.

The Geo. Taylor Hardware Co., New Liskeard, Ont.—"Kindly advise us through your columns the manufacturer of Alligator Steel Belt Lacings."

Crescent Oil Co., 18 Grenadier Road, Toronto, are agents for this line.

BANQUET POSTPONED.

Owing to the marine disaster which has cast a gloom over all parts of the world, the annual dinner of the Kingston Old Boys of Montreal, which was to have been held on April 19, has been postponed indefinitely.

The following items are taken from the issue of April 16, 1892:

"McMurtry & Co., have received the contract for St. Thomas waterworks supplies for the present year."

Editor's Note.—There are now two hardware firms of that name in St. Thomas McMurtry Hardware Co., and Geo. A. McMurtry Co.

* * *

"Fire destroyed the stable and sheds of Thomas Davidson & Co., St. Cunegonde street, Montreal, last week. The loss is estimated at $1,500."

* * *

"The Barb Wire Association at its quarterly meeting in Montreal reduced the prices of barb wire, plain twist and staples by 25c per hundredweight, the reduction to take place from the first of the month."

* * *

"The wire nail manufacturers met and confirmed for another quarter the list they adopted on January 8. The table of net prices, that is the price remaining after the 75 per cent. discount is deducted, ranges from $3 per keg for 6-inch 3-gauge to $6 for 5-inch, 86 gauge."

NEW BUSINESS LARGE.

Cleveland, O., April 18.—The Iron Trade Review to-day says:

New business has not been so large in the iron and steel trade during the past week, but prices have shown the influence of well filled order books for some time ahead, and have advanced in most finished lines of steel, while pig iron has shown substantial strength and generally better prices. This is true in spite of the fact that a Cleveland firm has sold about 28,000 tons of basic at a cut of 75c to $1.00 below prevailing prices. One of the largest pipe orders of the year was placed with the leading interest. Coke production has become more normal and fancy prices for spot coke have diminished. Sheets advanced from $1.00 to $2.00 a ton, merchant bars have advanced $1, the semi-finished steel market is stronger and more active and production is continuing at the record-breaking rate of March, thus far into April.

Complete Course of Sheet Metal Work

By L. W. KOSER

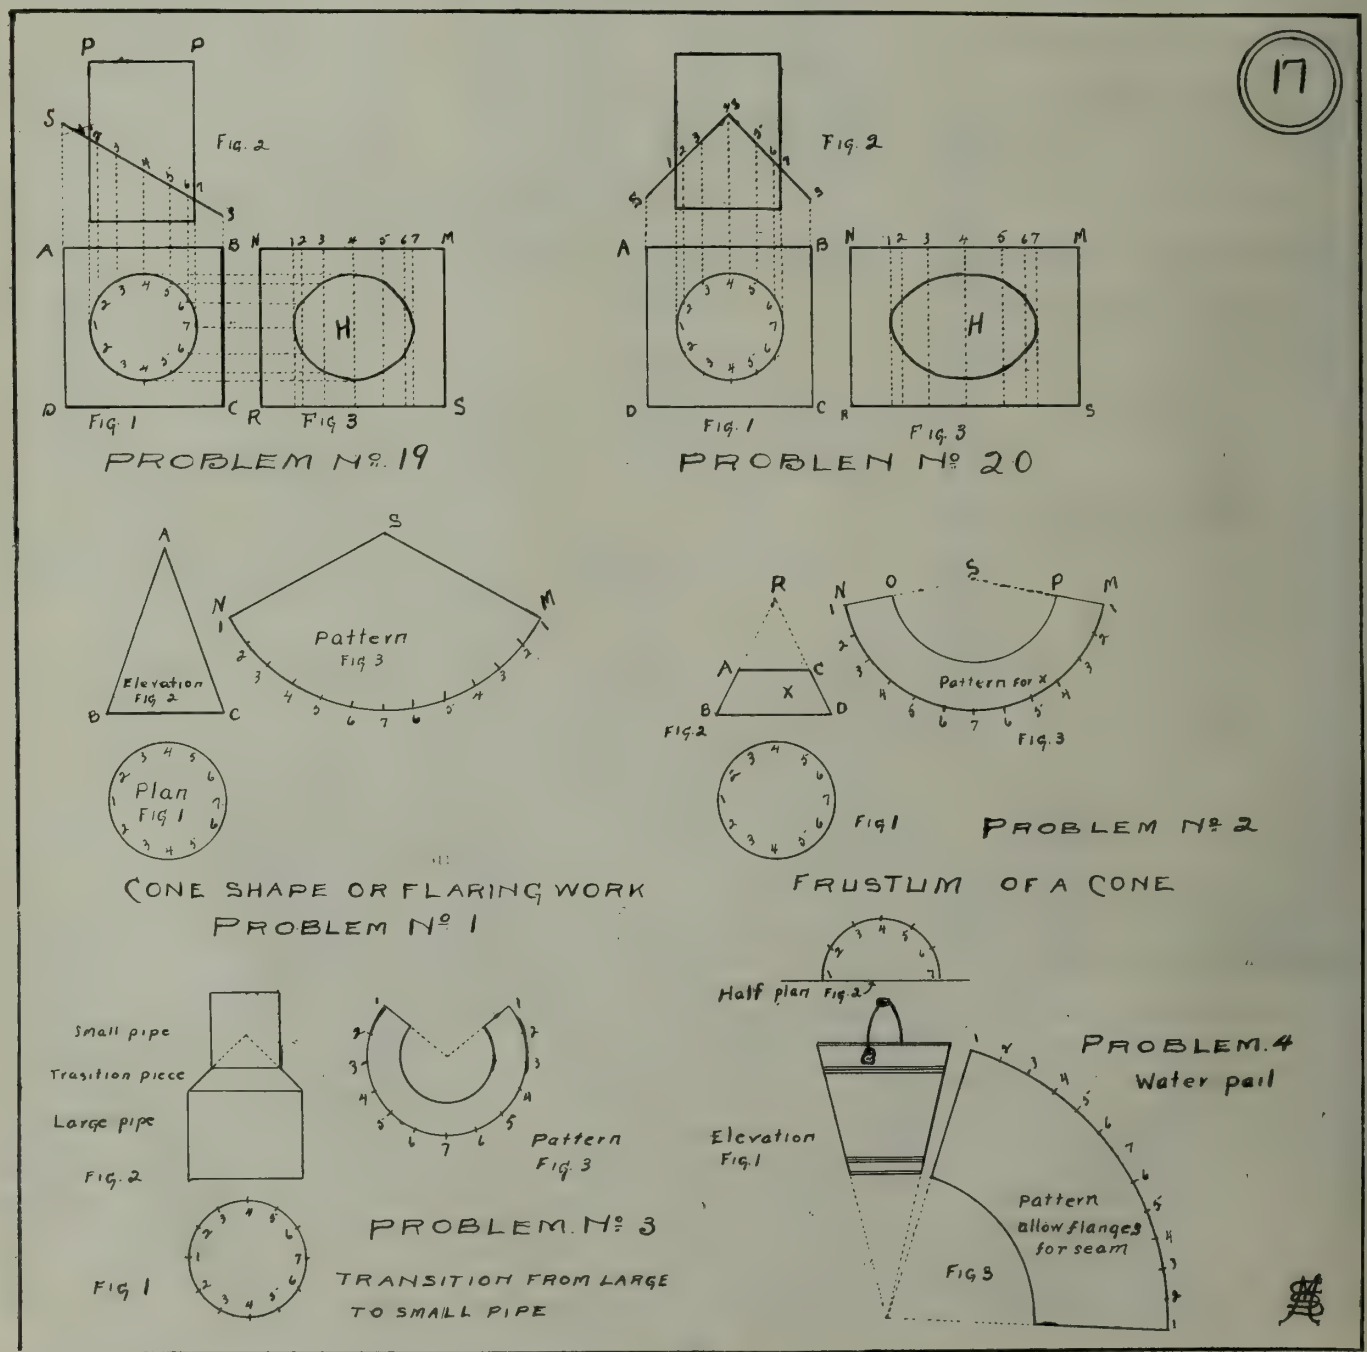
In problem 19, plate 17, Fig. 1 A, B, C, D, represents a collar flashing around a pipe going through a pitched roof.

What we want to develop in this case, is the opening H, Fig. 3, so that will fit close to the pipe when the collar A, B, C, D, is set at the angle shown by Fig. 2.

First draw the elevation Fig. 2 having the line P.P. equal to the diameter of the desired pipe, and the line S, S, at the desired pitch, and equal to the length of flashing wanted.

Then draw Fig. 1, which is a plan view of the pipe and collar as it would appear if seen from above.

Then draw the outline N, M, R, S, of Fig. 3, having N. M, and R, S, equal to the line S, S, of Fig. 2, and the lines N, R, and M, S, equal to A, D, and B, C, Fig. 1.



Now divide the circle of Fig. 1 into equal spaces and project lines from each point up to the line S, S.

Now, place one point of the dividers at S and the other point at I, Fig. 2, and transfer this distance to the line N, M, Fig. 3, as N, I. Transfer the spaces 1 to 2, 2 to 3, 3 to 4, etc., from the line S, S, to the line N, M, until all the spaces are transferred, and draw the usual measurement lines.

Now place the T-sqr. parallel to the line N. M. Bring it against No. 4 on Fig. 1 and cut No. 4 measurement line on Fig. 3. Then bring it against No. 5 and cut lines 3 and 5, then against No. 6 and cut lines 2 and 6, then against No. 7 and cut lines 1 and 7. Trace a line through the points of intersection, and develop the other half of the pattern in the same way.

In problem 20, Fig. 3 is a collar flashing to fit over a pipe going through a ridged or double pitched surface, the method of developing being the same as explained for Prob 19.

Concluded on page 50

Current News of Hardware Trade

To Represent Manufacturers.

Montreal, Que.—W. H. Evans is in New York this week, making arrangements to represent some New York manufacturers as their agent in Montreal.

An Explosion.

Montreal.—An explosion in the varnish room of the building on Congregation street used by George Wolfe & Son, manufacturers of shovels, caused a fire this week. Prompt work on the part of the firemen saved serious results.

Hockeyists Dine.

Montreal, April 19.—The fourth annual dinner of the Wholesale Hardware Hockey League, was held last evening in Cooper's dining room. The officers, and members of the various competing teams were present, and there was a right good time all round. During the evening the Fuller Cup and the Gillette Shield were presented to the champion Canadian Fairbanks-Morse team, while the runners up, Thomas Robertson & Co.'s players, were presented with a handsome trophy.

Want Half-Holiday.

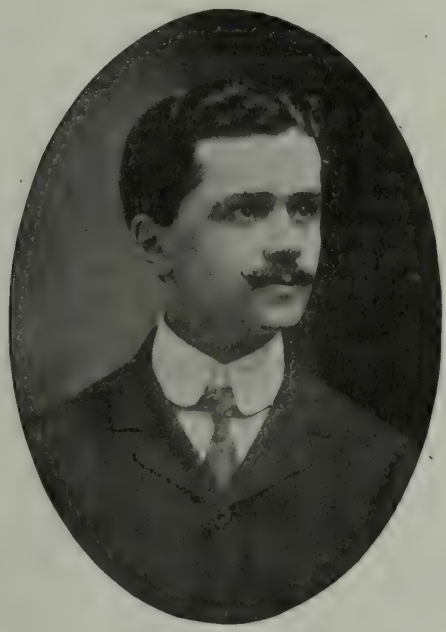
Fredericton, N.B.—The matter of the weekly half-holiday is agitating the clerks and employers of Fredericton and it is probable that a decision in the matter will be reached some time very soon. The clerks are requesting the same favor accorded last year, namely, the closing of business houses on Thursday afternoon of each week during June, July and August, and most of the employers are inclined towards the demand. In St. John it is expected that, beginning with June, the hardware houses will close on Saturday afternoons until Septmber, as has previously been the case.

In Larger Store.

Trenton, Ont.—Bailey & Reynolds, hardware dealers, are moving into new quarters. They have secured a double store which will give them practically double the floor space which they formerly had.

News From Regina.

Regina, Sask.—J. Walton Peart, of Peart Bros. Hardware Co., and Mrs. Peart left last week on an extended visit to Louisville, Kentucky. They will also visit several other points in the East before they return.



Wm. Munro has purchased the interests of Mr. Marshall, of the firm of Dunlop & Marshall, and the business will be continued under the name of Dunlop & Munro. The interior of the store has been generally improved, including the installation of cases and silent salesmen.

Agricultural activity has commenced in this locality. The farmers are busily engaged preparing for spring seeding. Seeding will be general in a few days.

H. A. Bernier to Open Store.

Montreal.—H. A. Bernier, for twenty-three years general manager of the hardware firm of L. J. A. Surveyor, has severed his connection with that establishment, and is starting the Bernier Hardware Co. at 126 St. Lawrence Boulevard.

Mr. Bernier is skilled in many lines, having devoted particular attention to newspaper advertising and to window dressing. He was one of the judges in The Hardware and Metal Christmas window dressing competition. Mr. Bernier states that he is going to handle only high class lines, and his store when

Hector A. Bernier.

opened in May, is sure to be up to date in every respect.

Traveling in West.

Winnipeg.—C. E. Beckett was in Winnipeg last week on a business trip through western Canada, representing Thomas Jowett & Sons, Sheffield, England.

Winnipeg.—W. Bruce Morrow, manufacturers agent, Toronto, called on the trade in Winnipeg last week and has planned a three week's business trip through the west.

Business Changes.

Sewan, Sask.—Walter F. Collins is opening up a hardware store here.

Mitchell, Ont.—Fred. A. Moses, formerly of New Liskeard, manager of the Cobalt Hardware Company, has moved to Mitchell, Ont., where he has bought out a business.

Weldon, Sask.—A hardware store is being opened here by the firm of Larsen & Targeson.

Gainsborough Sask.—The hardware stock of J. B. Wilson has been sold to I. A. Burke.

MacNutt, Sask.—N. P. Threinen, hardware and implement dealer, has been succeeded by Mr. Wagner.

Kronan, Sask.—Synder & Eberle have bought out the hardware and implement business of Schultz Bros.

Watrous, Sask.—The Watrous Trading Co. have disposed of their hardware department to Robins, Saunders & Robins.

Napinka, Man.—H. S. DeWitt, dealer in hardware and furniture, has been succeeded by Wood & Jack.

Teeswater, Ont.—D. Ferguson, hardware dealer, has disposed of his business, and is leaving for the West.

Personal Notes.

T. H. Jordan, vice-president of A. C. Leslie & Co., Montreal, is spending a few days in New York and Atlantic City.

W. Bates, once with J. Corbett, of Kingston, but who has been living in the United States for the past twenty years, is moving to Montreal.

HARDWAREMEN ELECTED.

St. John, N.B.—The vote taken in the election of last week was entirely favorable to the two hardwaremen, candidates for the offices of commissioner. Miles E. Agar and C. B. Allan were endorsed by a large vote polled in their favor as candidates on the "Citizen's Ticket," and they appear to stand a promising chance of being amongst the four winners for office in the finals to be held on Tuesday next. W. S. Fisher was one of three candidates for the office of mayor but, although considering the forces against him he polled a large vote, he was defeated. Had he been in the city and been able to make a canvass in his own behalf, there seems little doubt but that he would have been one of two to try the finals in the next election. As it was he was accorded a fine vote, and from Saskatoon, where he is establishing branches of his company, he telegraphed his hearty thanks to the electors who supported him.

Progressive Hardware Retailing

Easter Millinery in Western Hardware Store—Montreal Firm are Using Automobile for Delivery Wagon—A Splendid Hardware Display in Departmental Store—Regina Firm Make Saturday Sales Very Successful—Other Live Methods Adopted by Canadian Dealers.

MOVING STOVE DEPARTMENT.

Montreal.—R. and W. Kerr are now announcing their intention to separate their stove and kitchenware department from the sporting goods section of their business. A store is being built at 38 Cathcart Street, into which the ranges and kitchen utensils are to be moved about September 1st. This will give more room for the display of these lines, and also for the sporting goods.

HAVE MOTOR DELIVERY.

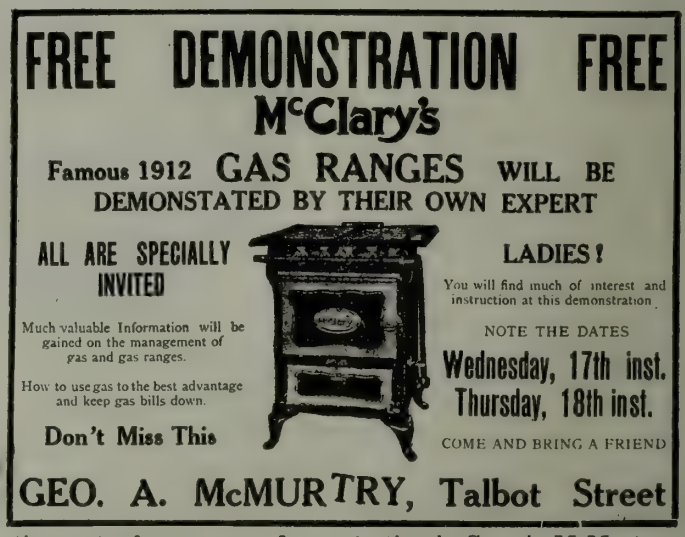
Montreal.—The James Walker Hardware Company are the first in Montreal to purchase an automobile delivery wagon. It is a big red car, of fine appearance and of large capacity.

A SPLENDID DISPLAY.

Toronto, Ont.—Inasmuch as the ways of the large departmental stores are interesting to the smaller dealers, if only for purposes of emulation, it is worth describing a window display shown in this week in the T. Eaton store. It is quite a remarkable display in its way and has attracted the attention of many thousands of housewives during the past few days.

Three window spaces are used for a display of household goods, most of the articles being particularly useful for housecleaning. There is a tremendous variety of goods shown, ranging all the way from tins of hand cleaner to motor washing machines and vacuum cleaners. Many signs are found containing announcements, such as "cleaning requisites for the housewife," and "now for the busy days." If there is a single article which could be needed for housecleaning purposes missing from the collection, the writer failed to detect the omission after a close scrutiny of over a quarter of an hour.

In the first window is a wax figure of a woman in kneeling position with scrub brush and pail, a placard referring to this method as "the old way." In the third window is another wax figure standing and operating a vacuum cleaner; this being placarded as "the new way." In the centre window is a washing machine with wringer attached, both being operated by a small motor.



The background of the window was built up with an assortment of brooms, paint brushes and whisks. Good use of step ladders, clothes horses and dryers is made for the display of the countless variety of smaller articles.

Everything in the window is hardware —except the gowns and dust caps of the wax figures, the prices of which are labelled the same as everything else in the window.

That a display of this kind has an absorbing interest for women was evidenced by the large numbers who can be seen studying it at all times. Retail dealers who have not already had a window display of this description should lose no time about arranging one. It will prove well worth while.

GAS RANGE DEMONSTRATION.

St. Thomas, Ont.—The gas range trade is now large and dealers are making efforts to get householders interested. As a great deal of moving is being done, more gas stoves are bought now than at any season of the year.

Advertisement of gas range demonstration in Geo. A. McMurtry store, St. Thomas.

Geo. A. McMurtry, hardware dealer, Talbot street, held a gas range demonstration at his store on Wednesday and Thursday of this week. He had secured an expert from the manufacturer to demonstrate the ranges and the latter gave talks as well on methods of getting the best results from the stoves and using the gas to the best advantage at the same time.

The event having been well advertised in the local papers, there were large crowds at the demonstration on both days.

BUSINESS IS GOOD.

St. John, N.B.—Business with local hardware dealers during the past few weeks has been exceptionally encouraging, and there is every reason to believe that the spring trade this year will be well above the average for this city. Already outside orders have been particularly heavy with the wholesale houses while the retail trade have had no cause to complain at their share. St. John and Fredericton merchants, however, complain that they have been held up in their receipts of orders this spring, not only from Upper Canadian houses but from across the water as well. Various reasons are ascribed for this delay, but practically all orders are entirely filled now.

The spring housecleaning campaigns are now in progress and every possible effort is being made by the various hardware firms to secure as large a share as can be had. The displays in most of the windows of the local stores are calculated to attract the attention of the passing housekeeper who sees featured such lines as she needs most particularly in helping her in renovating her home. Certain kinds of polishes and veneers

in particular are accorded especial attention and their sale is being pushed to almost every visitor to some of the stores.

OFFERING RANGE AS PRIZE.

Guelph, Ontario.—The Guelph Hardware Co. have placed a quart jar, containing tacks, on display in their store window and are advertising the fact that a steel range will be given away free to the person guessing nearest to the actual number of tacks in the jar. The rules of the contest are announced as follows:

Any person purchasing goods to the value of $1.00 will have the right to guess.

The range is a No. 9 Jewel Cook, and is valued at $40. Guaranteed the best. On display all next week.

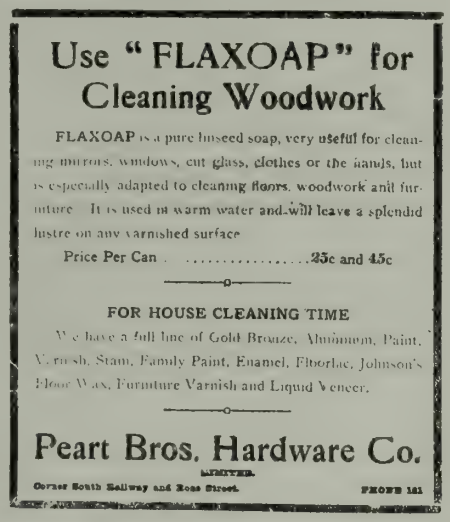
Guesses will be received up till 9 o'clock Saturday night, May 11th, 1912.

Outside men will be chosen as judges. In case of two guesses being the same the one received first will be counted, so buy your goods early and have first guess.

One guess only.

ISSUES A CATALOGUE.

Montreal.—A. E. Bregent, 192 St. Catherine street east, has just issued a finely illustrated catalogue of spring and summer sporting goods. Baseball gloves and bats, lacrosse sticks, tennis rackets and golf clubs are all shown, and prices at which these may be obtained quoted.



Another booklet deals with baseball uniforms, giving samples of cloths and prices at which these can be supplied.

HOLD SATURDAY SALES.

Regina, Sask.—Saturday special sales are conducted regularly by the Peart Bros. Hardware Co., with considerable success. Each sale is of articles priced at the same figure. The sale prices vary each week from 10 cents to one dollar.

Last week a fifty cent sale was put on, consisting of kitchen utensils, cutlery and tools. The articles placed on sale were priced regularly from fifty to seventy-five cents. One of the store windows was filled with an assortment of sale goods a couple of days previous. A large show card was hung in the window with the words, "Saturday Special 50 cents." On Friday night liberal space was used in the papers to advertise the sale. As a result of the publicity thus given, the store was crowded practically all day, and there was an exceptionally heavy sale of the goods offered. Although the margin of profit was smaller than is usually secured on the goods, the amount sold was large, thus affording compensation. In addition, the sales of other goods was increased by the presence of the people who attended the sale. Many who came to buy bargain goods made liberal purchases of other goods as well.

Peart Bros. have been carrying on a seasonable advertising campaign, as the

accompanying sample shows. They have been advertising paints heavily and also paying attention to soaps and other articles in use during house cleaning time.

EASTER HARDWARE MILLINERY.

Vancouver, B.C.—An Easter display that attracted more than ordinary attention was that of the Abercrombie Hardware Company on Granville Street. Generally hardware stores confine their displays to hardware lines, but on this occasion some excellent hats, or rather imitation hats, made a winning window. From the opposite side of the street one would never have known but what the hats were some of the peculiar shapes of the day, though closer inspection revealed the fact that they were cunningly devised of the materials to be found only in a hardware store.

Nine models were laid out in the window. Griddles, roasting pans, wash basins, dish pans, etc., were used, the trimmings being mostly wool dusters which did excellently in place of long willow plumes. Perhaps the most attractive was that in the corner the shape of which was a carpenter's tool basket, which was trimmed with a wool duster. At first glance one would not have recognized that it was a parody, the shape being altogether right, and the plume showing up well.

Rolls of wire cloth were used for stands on which to display the clever creations. No fixtures were in the window with the exception of hardware, rolls of wire, and such material as entered into the composition of the display. Crepe paper was used on the bottom of the window and for the background, against which the hats showed well.

The display was put in by one of the members of the store staff, and it was gratifying to note that people came in autos on Good Friday and Saturday and Sunday. Many sales were traced directly to the display.

Display of Hardware Millinery in the Store of the Abercrombie Hardware Co., Vancouver.

Weekly Market Report --- Metals

A FIRM TONE.

The dominant tone on the metal markets is the distinct tendency towards firmness. It seems quite probable that the near future will see higher prices in practically all metals.

Proof of the heavy consumption of metal in this country is found in the fact that shortages have developed in many lines. Supplies generally are light while demand continues heavy.

MONTREAL.

Montreal, April 19.—If there is anything in signs it would appear that this is a good time for those needing metal to buy. During the past week there have been a number of advances, and from the shortage of supplies, and the high price which the manufacturers will have to pay for coal, it seems practically certain that there will be further advances.

Tin has risen in value slightly in the past few days. Lead is not only scarce but high in price. Spelter is practically unobtainable. Copper is none too plentiful. This metal is likely to rise in value, but even should it not do this the jobbers are likely to feel the necessity of advancing their prices. At the present time they are able to keep their figures fairly moderate because they are selling stock which they secured at a more favorable market. Lead is exceedingly scarce. Orders, indeed, cannot always be filled. Even iron is scarce. The possibility of an advance here is being freely spoken of.

Transportation Improved.

Trade generally is fairly satisfactory. The transportation problem has improved somewhat, though still there are cars long over due.

Tin.—The advance here has not been great. Locally stocks are fair. Higher prices are spoken of as likely, but it is not at all sure that these will come in the immediate future. Those needing tin however, might do worse than buy now. Such is the opinion of the closest students.

Copper.—Stocks in the States are considerably lower than for some time past. This may be making some difference here. Anyway, certain it is that lead is advancing, and the expectation is that the price will continue in an upward direction.

The jobbers have advanced the price of bars and sheets 2c a pound. Brass rods have been advanced 3c, and rods and tubing 2c a pound.

Ingot copper is still quoted at $17 a cwt., a remarkably low figure in view of the high prices now being paid for the material in car load lots. If the 17c a pound which has been predicted is reached, the price of ingot metal in such quantities as are usually ordered from the jobbers will of necessity be considerably raised.

Borrowing the Fashion.

Antimony.—Stocks are low, indeed almost exhausted. Users are borrowing the one from the other. There is no likelihood of immediate relief.

Spelter—There is something approaching a spelter famine in Montreal. The handlers have next to none. The demand for the metal is quite considerable. Conditions are none too good. But some carloads are on the way. The price asked for this metal will be quite high, but it is hardly likely that there will be much complaint because of this.

Lead and Iron Going Up.

Lead—Stocks here are low. There has been an advance in lead pipe, the discount having been changed from 25 to 22½ per cent. Pig metal is not marked up, yet it is known that 4½c a pound are being given for remelted pig, and this in large quantities. Until some lead arrives there is going to be some trouble locally, but it is expected that a cargo will dock slightly before the end of the month.

Iron—This metal, usually staple however the others are fluctuating, is causing some uneasiness now. The makers have been shipping from stock, and therein lies the trouble. Their reserves are now well nigh exhausted. On account of the higher price of coal their new stocks will cost them more to make, and they will not, moreover, be willing to sell all they make. They will naturally wish to re-establish their reserve.

The tendency in this direction is already evident, for one local firm which placed an order for 10 tons was unable to secure this.

It begins to look like higher iron.

TORONTO.

Toronto, April 18.—There is a firmer tendency noted in all metal lines. While there have been no distinct price advances since last writing, fractional increases have been made, and all prices are firm. There is reason to believe that higher quotations will be made in some lines before long.

The feature of the market is the continued shortage in some metals. While the transportation situation has improved somewhat, great difficulty is still being experienced, and this adds to the troubles of the metal houses arising out of the paucity of stocks.

The demand is growing larger every day, and it is now generally recognized that the country is on the eve of a record year. Industrial development is indicated by the ever-increasing consumption of metal. Business so far this year has been much larger locally than during the same period last year.

Tin—Locally there has been a heavy demand for tin, and the price is firmer, 47 cents being the prevailing quotation. The primary market at London has felt the effect of the loss of the Titanic, but prices have remained steady throughout. A despatch reads:

"It is very evident that the appalling marine catastrophe has overshadowed the trading in the foreign markets. The serious loss of life and wealth naturally come home with much more force to England than America, and it is only natural that traders should stand on one side for the day, leaving the market steady and unchanged."

Scarce and High.

Lead—This metal remains scarce and high in price. There is a steady demand here, and it would cause no surprise if further advances were to be made shortly.

Copper Becoming Scarce.

Copper—There is not as much copper in sight as the metal handlers would like to see in view of the continued heavy demand. A report from New York gives some interesting figures in this regard: March showed approximately 5,000,000 pounds less of production than the 130,000,000 pounds of the preceding March, and the returns of the first quarter of 1912 of about 361,000,000 pounds in output, are only about 5,000,000 pounds larger than the production for the same quarter a year ago. In other words, 1912 so far has shown only a nominal increase in output, in spite of the fact that there were at least five important mines sending metal to the refineries this year that had not reached production stage a year ago.

Local stocks are light, and the price, as a result, is firm.

No Spelter Here.

Spelter—The shortage continues practically as complete as ever. There is none in sight, and any prices quoted are purely nominal. It is hoped that new supplies will be received by the first of the month, but there does not seem to be much hope of replenishing stores before that time.

Weekly Market Report --- Hardware

RUSH IS ON.

The spring rush is on in wholesale hardware circles. The improvement in the weather conditions has brought a complete stimulation of the retail demand and the dealers are losing no time, therefore, in getting stocked up to meet the trade requirements.

MONTREAL.

Montreal, April 18.—In the States, where many have become stampeded by reason of the approaching election, they are asking, "What's the matter with business." Well in Canada there is nothing the matter with business at all. In hardware lines all is well. The retailers are now being called upon to meet a large demand, and the wholesalers are naturally busy as a result.

It is of course for the spring lines that the demand is especially heavy; but for builders' hardware too, the call is satisfactory. The floods which were reported from several sections last week, have now abated. They interfered with business to some extent, yet what was lost will likely be secured later. When there is mild weather in the early winter. and the sale of skates and winter goods is small, the result is serious, for experience has shown that people then think, "Oh winter is well advanced now, I'll make what I have do." With spring goods, however, it is different. The summer is going to be of long duration, therefore though cold weather has retarded the start, there is yet great need of lawn supplies, garden tools and similar lines.

Stocking Wedding Presents.

Sporting goods are moving better all the time. The weather is becoming finer and the retailers are selling largely.

The open season for marriages is approaching. This means business to the hardware man, and that he may secure this busines he is now laying in a supply of goods suitable for presents. Some are rather delaying this action, but a large number of orders for this class of goods have already been received.

There has been but little change in prices of late. Owing to competition from the United States a drop of 10 per cent. has been declared on wooden screws and brass tacks. Some changes are also noted in tinware, but otherwise the market remains at the old figures.

Lawn Furniture Moving.

Spring Goods.—Lawn hose, clippers, mowers and sprinklers have been moving rapidly of late. So big have been the orders, indeed, that some of the jobbing houses have been compelled to renew their stock thus early in the season. Garden seats, and all kinds of lawn furniture have been selling well. The reasonable price at which these are now marketed has caught people's attention, and they are making purchases readily.

Kitchen Ware.—There has been no falling off in the demand for this class of goods. Still the retailers are displaying the good lines, and they are reaping their reward in large sales.

Builders' Hardware.—Nails, which are being sold at a remarkably small profit, are in good demand. Cement is moving well, too. It is time for the use of this now, and farmers who have become accustomed to handling it are making needed repairs about their buildings. or are laying the foundations for new buildings. Various roofings are moving well, too, at this season. It is a time of activity in all lines connected with new structures.

Decrease of 5 Per Cent.

Here the change in price alreay mentioned might be more fully explained. In addition to a 10 per cent. reduction in wooden screws the discount on round head bright, flat head brass, and round head brass tacks has been changed. The decrease is about 5 per cent.

Sporting Goods.—Baseball goods are usurping a good deal of window room these days. Lacrosse and tennis necessities too are finding a place. and fishing tackle and golf clubs are being shown. The sale is becoming heavy. It is indeed a great season for the sporting departments.

The rivers are becoming clear of ice now. Thoughts of canoes and boats are occurring to the young men, and purchases are being made. Nor is the bicycle being overlooked. It seems that a movement back to the wheel has started.

TORONTO.

Toronto, April 18. — The pleasant weather of the past week was just what was needed to bring business in hardware lines along with a rush. While there had been no reason previously to complain of the volume of trade, the unfavorable conditions undoubtedly limited the trade of the retailer. Some dealers, as a result, were backward about sending in their orders. Now all this is past. The dealers are not losing any time about stocking up such goods as they lack and the wholesale houses are experiencing a healthy rush of business.

The situation in respect to freightage is not improved at all. The wholesalers are still finding difficulty in getting new supplies, particularly if the shipments are from the other side, as much difficulty is found in making shipments, and dealers are complaining of the slowness with which goods reach them.

Collections are reported to be better although they are still a little slow.

Spring Goods. — Demand centres to some extent in spring goods. Garden tools are an active line at the present moment. There is a heavy call for everything pertaining to garden culture and already quite a large demand has been met for wire netting, screen doors, hose, lawn mowers and so on ad infinitum.

Household Goods.—Articles for use in the household are selling quite as briskly as outdoor lines. There is, for instance, a particularly heavy demand for goods which are required for housecleaning purposes. Among the lines moving are: Brooms, mops, pails, mop handles, step ladders, washing machines, wringers, clothes dryers, vacuum cleaners, polishes, gloves and whitewash brushes. While most dealers have already laid in their first spring stock of such goods, the run of sorting orders has begun, evidencing an active retail demand.

Some demand is also reported for refrigerators. Quite a few large orders have been placed, mostly in the city, however.

Builders' Hardware.—Building operations are proceeding apace and the hardwaremen are finding that they need complete supplies of everything pertaining to builders' hardware. The jobbers report an unusually heavy demand for this time of year. It is stated that cement is in steady demand and the same is true of roofing and building paper. An active spring trade is promised in all these lines. The jobbing houses are meeting with a very satisfactory call for tools and mill supplies generally. Hardwaremen seem to be handling more belting than ever before.

Heavy Hardware.—There is a steady demand now in most lines. Supplies have been more readily forthcoming this spring than usually, despite the fact that the demand has been heavier. Price quotations are:—Discounts on carriage bolts, $\frac{3}{8}$ and less, 60 and 10 and 10; coach screws, 75; stove bolts, 80 and $7\frac{1}{2}$.

Sporting Goods.—The demand for sporting goods has reached to full spring proportions. There is a steady call for guns and ammunition as well as baseball, lacrosse and tennis supplies.

The bicycle trade is proving quite a strong feature. Hardware dealers are handling bicycles and repair parts largely this spring. The motorcycle and everything pertaining thereto are also coming within the ken of the retail hardware dealer.

Stoves, Furnaces and Accessories

Advantages of Handling One Line Continuously

This Gives the Self Advertising Qualities of the Stove a Chance to Work—It Enables Repairs to be Made with Ease and Profit for the Parts Will be at Hand—Advisability of Tinshop.

What stove am I to carry? Is it a good policy to handle a number of lines?

Never, probably, was there a question drawer at any hardware convention where subjects like these were not brought up and discussed.

Opinions vary. In a multitude of council there is wisdom, so those who listen to the discussions doubtless go home with something to think over. As a result of this thought a number reach definite decisions—the kind of definite decisions upon which they are ready to act. Opinions may vary also on the correctness or incorrectness of these decisions, yet they are worthy of consideration by all, and it is therefore well worth giving space here to recounting the beliefs of a Peterboro hardware man.

Poor Policy to Change.

A. P. Brown, of the Higgins Hardware Company, is one who thinks it wise to stick to certain lines. He thinks it is much better not to handle too many and believes that to change a line unless for some good reason, is the poorest kind of policy. He argues this way. Stoves advertise themselves. If you handle one line this year and another next, there is need of pioneer work; whereas if one line is kept continuously people know that their neighbors have it; that they are getting satisfaction from it; and that it should be a good purchase for them. There is no uneasiness about the satisfactoriness of the stove, the question is merely one of price.

Mr. Brown cites an example of the manner in which stoves help to sell stoves.

Remembered Sister's Range.

"A man came in here last fall," he said, "wanting a stove. He was a stranger in the city. I did not know him and he did not seem to know any one. He had not a very clear idea of what he wanted in the way of a stove either, but suddenly he went over and examined a steel range. 'I'll take this one,' he said, 'my sister has one like it. I never heard her complain and I guess this will give us good service all right.'

"That was all there was to that sale. The sister did not live in Peterboro, but the man remembered the appearance of her stove and bought one like it."

From the viewpoint of repairs also there is an advantage in carrying one line continuously, according to Mr. Brown. A person comes into the store wanting a part. If this is for a stove which was carried years ago, but which now has been given up, there will be difficulty in filling the order. Where the old line is still carried, however, the part is at hand, and it can be put in with little trouble and with a good profit to the stove dealer. The ability to supply parts, moreover, gives the hardware man a good name. It leads people to come there when they want other things, whereas if the part could not be put in the range immediately, the customer would be disgruntled and would feel like trying another establishment when something else was wanted.

How Tinshop Helps.

Mr. Brown also ranges himself with those hardwaremen who affirm that it is a good plan to carry on a tinshop in connection with the regular hardware store. Mr. Brown's contention is based upon his experience with stoves. He believes that a tinsmithing department helps in the sale of ranges. It enables stoves to be installed.

People to-day like to have a job completed as quickly as possible. If they can have all the work done by one man they are better satisfied than if they have to see two or three about the work.

SOME GOOD AGENCIES.

The business which was formerly carried on under the name of Dingman & McCombe, 22 St. John Street, Montreal, has undergone some changes. It is now being conducted by Gault McCombe under the name of Gault McCombe & Company. This firm is acting as agents for Jevens & Co., Liverpool, iron, tinplate, and metal merchants; Aktiebolaget Gernexport Co., Stockholm, Sweden. Swedish iron, etc., and a number of other British and European companies. They have recently been appointed Eastern Canadian representatives for Earle Bourne & Co., Birmingham, manufacturers of brass and copper tubing. An office has been opened in the Corristine building.

WIRE COMPANY CHANGES HANDS.

Montreal, April 16.—The machinery and plant of the Wire Goods Company of Canada has been purchased by Wire Goods, Limited, and manufacture will be continued at Howick, P.Q. The new company is capitalized at $50,000, of which amount $10,000 is already subscribed. Officers have been elected as follows: President, Robert Maw; Vice-president, Andrew T. Hunter; Secretary-treasurer W. B. McLean; Managing Director, Robert Renton; Manager of works, Joseph Goyette.

A Montreal office has been opened at 204 St. James Street.

OPINIONS ON SPECIAL NUMBER.

Henderson & Richardson.

We are very pleased with this number. It is the best yet.

Double Claw Hammer Co.

We are much pleased with our full page ad. After carefully examining this publication, we find it quite beyond our capability to make any suggestion in the way of improvement. Your spring number is quite as masterfully complete as anything of its kind known to us. You certainly understand the art of arranging advertising matter. We thank you for the pains you have taken in our case.

AGENCY REORGANISED.

The agency business formerly operated under the name of Eadie-Douglas, Limited, with head office at 12 University Street, Montreal, has been reorganized, and the name changed to Douglas-Milligan, Limited. H. C. Eadie has withdrawn absolutely from the business, and the president organization consists of:—H. P. Douglas, president; G. M. Milligan, vice-president; E. M. Watson, secretary-treasurer.

The Toronto branch office is now under the management of W. F. Gouinlock, with offices in the Confederation Life Building, and the company is represented by live agents in the leading cities throughout Canada.

The company represent in the building and mechanical lines some of the best known concerns in the business.

Weekly Market Report---Stoves

ADVANCES IN PRICE.

The stove and heating market has been featured by a pretty general advance in tin and galvanized ware. The setting of the new scale was necessitated in order to even up in some lines, but the underlying reason is the increased cost of raw material.

There is an active tone to the stove market and sales have been heavy.

MONTREAL.

Montreal, April 18.—As was predicted last week some advances have been made in various galvanized and tinned lines. It was only to be expected that this would be so, since raw material has been advancing so rapidly owing to the strike. More advances may come before long, but it is not likely that any of these will be of such an extent as to cause alarm.

Orders generally have been good of late. The bad weather seems about over. Now the travelers are able to get around, and they are securing results. For stoves, refrigerators and kitchen utensils orders are being sent in, but especially is the call good for kitchen utensils. These appear to be needed in all parts of this wide Dominion.

Some of the Advances.

Hollow ware tinned steel has been advanced, the discount, having been changed from 50 to 45 per cent. The reason, of course, is obvious. On account of the strike tin of the class which has to be used for this tinning has advanced greatly. To cover themselves the manufacturers have had to raise the price of the finished product.

Fire shovels, sizes 2 and 3, have been raised in price to $2 and $2.50. Quite a large advance this, for the discount has not been changed, standing at the old figure of 50 per cent.

Retinned stamp ware has been increased. Whereas the discount was 75 and 12½, it is now 75 and 5. The advance in pig tin has made this increase necessary.

Cheese factory trimmings, which were quoted at 25 per cent. discount, are now rated at 20; while coal hods, both galvanized and Japanned, are now quoted at 35 per cent. instead of 40 per cent.

Changes in Lists.

There has been a change in the list of galvanized oil cans. The new quotations are:

½ gal	$ 4.35 per doz.
1 gal	5.50 per doz.
2 gal	8.50 per doz.
3 gal	10.50 per doz.
5 gal	13.50 per doz.
5 gal. oil can with tap	14.00 per doz.

The discount remains the same.

Also there has been a change in the list price of enamel cream pitchers, as follows:—

	No. 8	10.	12.
Gray	$ 7.50	$ 8.50	$ 9.50
White	15.00	17.00	19.00

Spring Goods.—All classes of kitchen utensils have been moving well. The retailers are feeling a good demand for these articles, and are therefore buying largely from the manufacturers. The demand for refrigerators, becomes heavier every day.

Good Gas Range Business.

Gas Stoves.—Business here is brisk. Good advertising campaigns are being carried on, both by manufacturers and retailers. The people are being led to see that they will profit by ordering early. It is only by taking this step, indeed, that they can be assured of prompt delivery.

Ranges, heaters and furnaces. — Ranges are being ordered. Dealers have been selling stoves already, and they see that they will need more to satisfy the demand. Heaters, of course are quiet. A few are being sold, but only a few. Furnaces are being installed in new houses. That is the extent of business in this line.

TORONTO.

Toronto, April 18.—There is a brisk tone to business in stoves and heating accessories. The manufacturers are so busy, in fact, that they are finding difficulty in meeting orders in some few lines.

It is quite apparent that sales to date have been much heavier than is usually experienced at this season. A number of manufacturers report that they have made substantial increases over the amount of business done up to this time last year.

The feature of the week is a pretty general advance in some lines of tin and galvanized ware. The advance is not large in any case and will not disturb trade in any degree. The new prices have been brought about largely through the advance in the cost of the raw material.

Cream cans are now quoted at a discount of 40 per cent. instead of 45 per cent.

Black T pipes are now $4.50 a dozen, taper pipes $2.50 a dozen, and galvanized ridge pipes $9.00 a dozen; all subject to a discount of 40 per cent.

There has also been an advance in the prices on galvanized oil cans. The list now stands: ½ gal., $4.35; 1 gal., $5.50; 2 gal., $8.50; 3 gal., $10.50; 5 gal., $13.50; subject to the regular galvanized ware discount.

The prices on oblong stove boards have been arranged as follows: 18 by 24, $18.50; 18 by 28, $19.00; 20 by 28. $21.00; 24 by 32, $25.00; 26 by 30, $25.00; 25 by 36, $26.50; 26 by 34, $26.50; 26 by 38, $28.50; 28 by 36, $28.50; 28 by 41, $37.50; 28 by 44, $40.00; 30 by 48, $50.00.

There have also been slightly increased quotations set for black and tinned kettle ears.

Ranges.—The range trade is active and is becoming more so every day. There is a pretty steady demand, although few large orders are being received. One order for 16 was received by a local manufacturer this week but this is largely in excess of the usual proportions of April orders.

Can't Meet Demand.

Gas Ranges.—The demand for gas ranges has become so large that the manufacturers are not in a position to fill all orders promptly. There has been a most marked increase in the demand over last year, showing that the market for the gas stove is becoming much wider. Rush orders are now being received and it is quite apparent that dealers are selling rapidly. A Toronto dealer ordered 45 the other day and wanted them sent to him without delay, which shows how brisk the trade has become.

Heaters.—Few orders are received for coal heaters but oil stoves are in pretty good demand. Spring and fall are the seasons when the oil heater is particularly in demand.

Furnaces in Demand.

Furnaces.—The furnace trade has not yet attained to what might be termed full spring activity, but it is getting there fast. Buildings are being rushed along in the cities and the heating contractors are making an early start at their work. There is, as a result, a good outgoing movement of furnaces noted.

WILL MISS PAPER.

"Hardware and Metal.—Having sold my business I therefore wish to stop my subscription for Hardware and Metal. I will miss it very much as I have taken it for a long time and have been very much interested in reading it from week to week. Every hardware merchant should have a copy of it as it will in many ways help him in his business."—D. Ferguson, Teeswater, Ontario.

Weekly Western Market Report

Improved Weather Conditions Followed by Improvement in Trade—Activity is Now Reaching the Culminating Point—Firmness Noted in All Lines.

Winnipeg, April 18.—There is no change in the situation here as regards prices, but the condition of the copper market indicates probabilities of a rise in price of all copper manufactures, copper plate, copper wire and brass goods. It is also considered probable that hardwood manufactures may shortly become dearer.

With the opening of the building season has come an unusually good demand for carpenters' tools and painters' supplies. There is also a first rate demand for the minor lines in builders' hardware.

The weather on the whole has been favorable for out-door work and good progress has been made. Two light snowfalls have caused delays, but on the whole have been rather beneficial to the land than otherwise.

Collections are still far from satisfactory, and little improvement in this respect need be looked for until seeding is finished. The whole energy of the West is now devoted to getting in the crop. That done, it will get busy squaring things up. There is not the least cause for anxiety in this matter. Accounts outstanding will be made good.

The opening of navigation will, as usual, give a great boost to Western trade. Orders are being held back for all heavy goods awaiting the reduction in freight rates that follows the opening of the lake-rail route.

To sum up, the outlook is distinctly satisfactory. Wheat, the basis of all Western trade, is high and going up; also there is lots of it yet to move. Foreign capital and a most satisfactory class of emigrants are pouring into the country and every man worth his salt is able to get work at good wages.

Winnipeg Hardware Quotations.

Ax Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.95; p.g. oak, $2.90.

Augur Bits—"Irwin" bits, 47½; other lines 70 and 10 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3; small lots, 2½; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.25; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $15.

Blocks—Steel, 50 per cent.; wood, 60 per cent.

Cut Nails—$3.15 per keg base.

Wire nails, base, $2.80 Winnipeg; $2.35 Fort William.

Copper—Sheet and planished copper, 30c per lb. Tinned, 24c. Copper wire, 3-inch gage, 24c, to 20-inch gage, 29c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corrugated iron, 28 gauge, $3.87; 26 gauge, $4.18; pressed standing seamed roofing, 28, painted, $2.84; 26, $3.24.

Canada Plates—Firm. Half polish, 6 and 7-inch, $3.65; 8-inch, $3.90; full polish, 6 and 7-inch, $4.40; 8-inch, $4.65.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 5; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron—Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 6, $4.20; 28, $4.60; 30 gauge or 10¾ oz., $4.80; Queen's Head, 20, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Iron Pipe—⅜ in., $3.25; ½ in., $4.05; ¾ in., $5.00; 1 in., $7.20; 1¼ in., $9.80; 1½ in., $11.80; 2 in., $15.30.

Galvanized Ware.—37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.90; No. 2 and larger, $4.65; snowshoes, No. 0 to No. 1, $5.15; No. 2 and larger, $4.90; steel No. 0 to 1, $5.35; No. 2 and larger, $5.10; featherweight, $6.50.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $2.75; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50, 5 and 5 per cent.

Hinges—Light T and strap, 65 per cent.

Hooks—Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 40 per cent.; smaller lots, 35 per cent.

Iron Pipe, Black—⅛ in., $3.15; ¼ in., $2.30; ⅜ in., $2.35; ½ in., $3.15; ¾ in., $3.80; 1 in., $5.45; 1¼ in., $7.45; 1½ in., $8.95; 2 in., $11.55; 2½ in., $18.40; 3 in., $24.15; 3½ in., $32.25; 4 in., $36.75; 4½ in., $42.50; 5 in., $47.50; 6 in., $61.50; 7 in., $95.50; 8 in., $118.

Logging Chain—¼ in., $7.50; 5-16 in., $6; ⅜ in., $5.50.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$4.75. Lead Pipe—$5.75.

Lead Waste—$6.75.

Rivets and Burrs—Iron rivets, 55 per cent.; copper, No. 8, 30c; 10, 32c; 12, 34c; copper burrs, No. 8, 40c; 13, 43c; 12, 46; copper rivets and burrs, No. 8, 31c; 9, 32c; 10, 33c; coppered, No. 8, 17c; 9, 17½c; 10, 18c.

Rope — Sisal, 8¾; Pure Manilla, 10¾c; British Manilia, 9c; lath yard, 9¼c.

Staples.—Bright wire, $2.50 F.O.B. Fort William; $2.90, Winnipeg.

Steel Squares—40 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 6 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—Half and half, $28 per cwt.

Screws—Flat head, iron, 87½, brass, 77½; round head, iron, 82½; brass, 72½; coach, 67½ per cent.

Staples—Bright wire per cwt., $2.50 at Fort William, $2.90, Winnipeg.

Complete Course of Sheet Metal Work

(Concluded from page 42.)

The elevation Fig. 2 is first drawn. This shows the pipe and the shape of the surface through which it passes, and is also a side view of the flashing.

Then a plan Fig. 1 is dropped from the elevation which gives a top view, also the true shape of the pipe and the exact width of flashing.

Then the lines N. M. and R. S. are projected out from A, B, and D, C, their true length being taken from the line S-S-S Fig. 2.

Then the circle in Fig. 1 is spaced off and lines projected up to the line S-S-S Fig. 2.

Then the different spaces on the line S-S-S are transferred to the line N-M and the usual measurement lines drawn.

Then with the T-sqr. placed parallel to N-M bring it against the different points on the circle Fig. 1 and cut the corresponding measurement lines.

It matters not what the shape of the pipe is. The method of getting the flashing for around it would be the same herein outlined.

Methods of Retailing Paints and Varnishes

Featuring Paints is Profitable Business

The splendid Results Obtained by the Raymond Hardware Co., Montreal—The Paint Stock Was Kept to the Fore Right Through the Winter Months.

After all there is really only one way to sell paint in any quantities, that is to let the people see that you have paint to sell. There may be firms that can carry on business without any display—shrinking from, rather than seeking the light of publicity. But their number is small; and after all they know that their very shrinking from the public gaze, their very exclusiveness, gives them the publicity which they must have to live.

In any event it is only a Tiffany's or some such concern which can successfully carry on business thus unobtrusively. The average hardware dealer—any hardware dealer in fact—must make his presence known in a community, and he must make his goods known through his windows, through his shelves, and through his other advertisements.

Large Sales in Winter.

The Raymond Hardware Co., 343 Notre Dame street, Montreal, believe in playing up their goods prominently. Especially have they devoted space to paint and varnish. In the winter, when the demand was not generally great, this firm kept varnish and floor paints to the front. Displays were put in the windows. Manufacturer's helps were used, and the natural result followed. In the dull months—the months when some held that there was practically no use trying to sell varnish, much less paint—this firm made large sales.

But the dull season has passed now. Spring is here and with the spring has come a demand for paint. Yet it must not be thought that men and women wake up of a morning and suddenly decide that they have painting to do, and that they will buy a few cans, a brush or two, and get to work that day. A few do this. Only those who make a genuine effort to secure the paint trade know how few.

How Sales Are Made.

Paint sales in the great majority of cases come as the result of a number of suggestions. A man sees a paint advertisement in his paper. Paint is at once suggested to him. He perhaps thinks that a little would not do his house any harm. But he turns over to the sporting page, and forgets all about the subject in his grief at a baseball reverse. The next day he sees a hardware window in which paint is well displayed. He paused. The thought of the

Paint and Varnish Department of The Raymond Hardware Company, Montrea l.

house that would be improved by a coat or two recurs to his mind—with a little more force this time. But again he moves on. Perhaps he sees a poster or two. Perhaps he sees another house that has been painted. He notices the fine appearance it presents. Suddenly he determines that he will paint his house, and he hurries back to that store where he saw the good display.

So it is with a woman. She does not determine to buy varnish right away. She sees varnish in a window. She sees the posters which show how the interior of a room may be brightened by a little of this. She sees the improved appearance it gives to a floor; and she thinks of the woodwork in her own home. Her purchase is just the result of these suggestions which have been given to her.

In the Raymond hardware store the idea of giving suggestions has not been lost sight of for a moment. Fine windows are regularly arranged. This takes some time, but it brings result. The helps issued by the varnish and paint makers are used wisely. They are sent to those who it is known are interested in paint. Thus are people brought to the store, and there they see a paint department which is bound to attract and hold their attention. There is no disorder. The cans are arranged in perfect rows. Color cards are kept on the counter. Brushes are to be found in the silent salesman. A man going into the store with any idea of buying paint or varnish is not likely to go out without placing an order. He is likely to take away a brush or two also.

This careful arrangement, and all round careful attention to the paint department, has brought remarkable results—much greater results than were expected, stated the manager of the store. Varnish has been pushed especially of late. And varnish has been selling so fast that the orders are of the cart load variety.

Go after the Paint Trade; Don't Wait for it

Elbert Hubbard has remarked, "The man who can sell things is a success. Others may be."

There are a good many who do not see eye to eye with the Fra on all points, but every man who has paint upon his shelves will agree that the man who can sell this in large quantities is entitled to be called a success. There are degrees in success of course, but no man who can arouse the people to the need of painting can properly be called a failure.

Paint is not the easiest thing in the world to sell. Any man can lay in a stock and dispose of a good deal of this, for there are bound to be a number in the community who are alive to the value of paint. But the man who gets the largest sales—who is truly successful in this line—is the man who can arouse interest in those who have not thought much about painting; who can give those who have been actually ignorant, some conception of the value of paint, which will make them come into the store and purchase largely.

The Case of Two Men.

How is this end to be achieved? That surely is a great question, and one to which no definite answer can be given. But methods adopted successfully by others may be recounted from time to time, for these can hardly fail to be of value to others who are attempting to get all the profit they can from their paint department.

In Joliette, Quebec, two men were in partnership in the hardware business. Their names need not be mentioned here for both have moved now. One of those men was a great paint salesman, He was not content to sell paint only to those who came to the store for it. He felt sincerely that there were many others in the neighborhood who would be wise to expend some money for paint. That these people had not awakened to their need was unfortunate, but this active partner did not intend to permit them to suffer, or to permit himself to suffer, by reason of their ignorance. He went out among these people. He spent long afternoons in the country seeing which farmers seemed to need paint. Then he would talk to these men.

The Value of a Letter.

This Joliette salesman had a number of good schemes. He would write to those who were building new houses. These, he felt sure, would be buying paint. The only thing was to get them to buy the right kind—the kind which he handled. But those who were building new barns were even better worth keeping in touch with. Sometimes this aggressive salesman wrote letters to the owners of the barns. He believed this to be good policy in a number of cases. Indeed he sometimes sent letters to men whom he saw at least once a week. There was an object in this. Some of those country people were not in the habit of receiving a great deal of mail. A letter was in the nature of an event. Its contents would be speculated upon before the envelope was opened, and the writing inside would be carefully scanned. Every word would be noted.

Spoke From Accurate Knowledge.

The dealer found from experience that he could put facts about his paint clearly before people by such letters. He would tell them the figures at which barn paint could be purchased. He would estimate the amount which would be needed for the barn in question—having previously discovered the dimensions of that barn. He would explain something of the preserving qualities of the paint, and would give an idea of the time it would take for the farmer to paint the barn himself; suggesting that this might be done at a season when other farm work would not demand a great deal of attention.

Some men, the dealer decided, would be more impressed by a personal talk; and to them he explained by word of mouth the advisability of painting. Often there were slow mornings and afternoons in the store, and then this man would harness up and go off to talk with a prospective customer, or perhaps merely to look up other prospects.

That is a part of the story. Later the partnership was broken, one man retiring and the other—the hustling salesman—going west. A new dealer took the Joliette store, and at once there was a great falling off in the paint sales. It was no ordinary decrease. According to the house who supplies the dealer he does not take ten per cent. of the paint that was sold in the days of the man who made paint salesmanship a serious study

The cause of this tremendous drop can only be attributed to the methods used. The paint sold was the same. Those who had used it were entirely satisfied. What they said must have tended to make others think of using paint, yet the sales decreased by leaps and bounds. The new dealer did not keep in touch with his customers. He did not study the neighborhood to see who would need paint. He simply waited for the orders to come, and they didn't come.

There is another thing to be considered too. By the missionary work he did for paint, the first dealer stirred up a demand for other lines—brushes, and regular hardware, needed about the farm. In his trips he took many orders for this class of goods, and he established a connection which meant much trade to him the year through. This business, to a certain extent, was lost to the dealer who succeeded. He did not keep himself and his goods before the people. He did not keep all their patronage.

There may be cases where it is impossible for the dealer to get out and canvass as did the successful paint salesman whose story is outlined here. Retailers in large centres could not do this. Perhaps it would be impossible for some in smaller places; yet it is very evident that to secure the best results a dealer must keep in touch with those whose custom he seeks.

Free Help for Every Decorator

Our new service department will help you plan the interior and exterior painting and decoration of any house or of a part. In place of a small job, you can get a big one, well planned and done. Remember the

Special helps for the decorator or dealer to get him good business.

M-L MAPLE LEAF

Every decorative problem properly answered for best results.

DECORATIVE AID DEPARTMENT

M. L. PAINT is best-lasting exterior paint, improved during 20 years of careful tests. The kind that helps your business when you sell it. Ready to use.

FLOORGLAZE, a flint-hard, glass-like and beautiful floor finish that applies easily, stands wear, resists scratches. Best of all interior finishes.

is at your free service. Just send us your problem. We give you exactly the right shades and line of goods to use. We give you suggestions. Give areas and we tell exactly how much paint you need, or varnish, or flat wall color. Stencil suggestions, too. Get booklet.

ELASTILITE, an indoor or outdoor varnish that is applied easily and perfectly. You can guarantee it. It gives every satisfaction. A beautiful finish.

M. L. FLAT WALL, an easy-to-clean wall paint for plaster, burlap or wood, in beautiful interior shades. Sanitary, clean and adapted to stenciling.

Samples of the above finishes on request. The Decorative Aid Dept. supplies suggestions, estimates and stencil designs (stencils also at low cost) to any decorator, painter or dealer who wants to give his customers the best and most modern service. Freely at the service of the entire retail trade. Send your problems.

MAGNETS

TALK NO. 1—PAINT

The attraction between product and consumer is the secret of business success. One good selling article often proves the magnet that attracts the multitude your way.

Place two magnets near a nail and the less powerful one will immediately lose its drawing power, just as an ordinary paint loses its drawing power when a superior paint goes on sale in your community.

The magnetic features of paint—the features that draw customers with an attractive force that is irresistible—are fineness of texture, uniformity of covering, serviceability and even wearing qualities that leave a smooth service for repainting.

Lowe Brothers "High Standard" Liquid Paint possesses all these magnetic virtues. It draws custom and holds custom. If you are interested in business building, investigate this sales-getting "Magnet."

Weekly Market Report --- Paints

AN INCREASED DEMAND.

The past week has been a busy one in paint and oil circles. The demand is largely in excess of that usually experienced at this time of year.

Linseed oil is higher in price and advances have also been recorded in glass prices. White lead may advance at any time although no move has been made up to the present.

MONTREAL.

Montreal, April 18.—"It is remarkable the way paint is moving this year," remarked the sales manager of one of the large paint manufactories. "There seems no doubt at all now that this will be a banner season."

Words such as these are to be heard on all sides. There is no wild rejoicing. The heads of concerns are too busy to spend much time gloating, but they do say in quiet yet pleased tones, that the business to date has been all that could be expected, and almost all that could be wished. About the only complaint the manufacturers have, indeed, is that they feel they might sell even more could they manufacture more.

Good Work on Firing Line.

The retailers—the men on the firing line—are evidently doing great work on paint. They are co-operating with the manufacturers to the benefit of all. Generally there is a greater interest shown in painting than has been evidenced for some time.

The cartage and freight trouble has been somewhat relieved. One firm reports that it has been able to have everything moved which was to be moved—a happy state of affairs which had not existed before for some time. Generally better conditions of transportation are reported.

Prices, for the most part remain firm. Linseed oil has advanced somewhat, but without any apparent cause. It is not likely that the upward movement will continue.

White Lead.—While there is still a feeling that a higher price for white lead may be struck, no advance has come as yet. The business in this line is heavy. From all districts the orders are coming. Seven cent lead is still looked for by the manufacturers. It would seem that retailers would do well to consider the likelihood of lead reaching this figure before any great length of time.

Linseed Oil Advances.

Turpentine.—Conditions here are practically unchanged. The supplies are fairly good, and prices are still quoted at .70. There is not a great demand, though this material is being used quite largely as is usual at this season. Retailers, as a whole, appear to be fairly well supplied.

Linseed Oil.—A general stiffening of the market is noted, prices having risen from .91 and .94 to .93 and .96. What causes this rise is hard to explain. There is no scarcity noted. There are no rumors of a coming scarcity. The ordering is quite large—larger than it has been for some little time, and the advance seems to come as a natural result.

Mixed Paints.—The demand here is exceedingly heavy. Car load lots are being shipped almost daily. From the west, the east, and the central parts of Canada, the orders are being received. There is no talk of high prices. The thing the retailers seem to want is to get the paint. A demand has been created, and the dealers must take steps to meet this demand and to foster it.

A Splendid Month.

Last year April was an exceedingly poor month. This year it would seem that it is going to be one of the best the paint trade has had in some time.

Glass.—The new scale of prices, mentioned in detail elsewhere, is not stopping ordering. There is a real demand at this season. Double windows are being taken off and breaks occur. New buildings are being completed. In all neighborhoods glass is needed. The handlers' stocks are none too large, but fresh supplies are expected by the early boats.

Paris Green.—The demand for this material is growing larger. Jobbers are receiving orders daily. In a short time now the retail demand will assume large proportions, and the dealers are taking steps to meet this trade.

TORONTO.

Toronto, April 18.—There is a more active tone to the market and it may almost be said that full spring activity is now shown. The jobbers and manufacturers are very busy and all reports are to the effect that the trade is largely in excess of any previous year. If business keeps up at the present rate, the year 1912 will prove a record one.

The past week has seen quite a few changes, and the air is full of rumors of other price changes pending. It is taken for granted that there will be an advance before long in white lead, although the grinders have not made any move yet.

Linseed Oil.—The price of linseed oil has been boosted 2 cents here, making the prevailing quotations 96 for raw and 99 for boiled. This is rather a high price for this time of year, but those in close touch with the situation state that it is not as high as the circumstances warrant. English oil is higher than for some time, and all reports are to the effect that it is certain to remain up. Seed in Canada is not plentiful and there is said to be lively competition for the supplies as they come on the market.

There does not seem to be any doubt that linseed oil is going to remain high. Prices for midsummer delivery are stiff, and there are no signs of a let-up. Demand locally has been good for this season of year.

Turpentine.—A reduction of one cent has been made in turpentine since last writing, so that the price is now 69 cents. There is a fairly good demand.

The future of turpentine is a little uncertain. There is only a normal supply on hand at Savannah and the new turpentine is arriving very slowly. Under the circumstances, higher prices might be expected only consumption in America has been very high. Whether this can be accepted as a proof that stocks are becoming light with the sure prospect of a heavy buying movement shortly, remains to be seen.

In the meantime local stocks are very light. Some of the jobbers are reported to be sold right out and new supplies are arriving slowly. There is just enough turpentine on hand, in fact, to meet immediate requirements only.

White Lead.—There are no developments to report in white lead. The higher price charged for linseed oil makes still more certain the prospect of an early advance in the price of white lead.

Glass.—The change in the discount on glass will be found elsewhere in this issue. It is felt here that the advance is fully justified in view of all the circumstances.

Putty.—There is an active demand noted for putty. Present prices are:—Standard bulk in casks, $2.20; in 100-lb. drums, $2.25; in 25-lb. drums, $2.65; bladder, in barrels, $2.75. Pure putty prices remain the same. Bulk, in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder in barrels, $3.

Prepared Paints.—There is a heavy buying movement in all lines of paint. Dealers are experiencing a brisk demand and are finding it necessary, in many cases, to send in sorting orders. Shipments have been heavy during the past month, but especially heavy during the last week. The few days of real summery weather brought a flood of "rush" orders from dealers in all parts of the country.

B-H "ENGLISH" PAINT

70% PURE WHITE LEAD – 30% PURE WHITE ZINC

100% PURE PAINT

ALWAYS PROFITABLE

This paint is not an experiment, but a product that has "Made Good" with both dealer and user.

It is up to the high standard mark in quality and durability and is constantly bringing many repeat orders which prove its high efficiency.

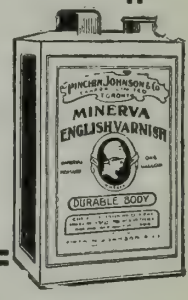
Full Imperial Measure

Not Wine or Short Measure

You cannot lay too much stress on the fact that your customers get full Imperial measure with every can of

MINERVA

PAINTS AND PAINT SPECIALTIES



The Famous British Brand

But that is not all. "MINERVA" Brand is the essence of high quality, and is backed by an unsullied reputation of 78 years' standing.

Our dealer co-operation and selling helps have created a tremendous demand for the "MINERVA" Paints—the most profitable line for aggressive retailers.

Get details of our Proposition. It will pay you.

Pinchin, Johnson & Co.

(Canada) Limited

Established in England in 1834 — 377-387 Carlaw Ave., Toronto

K 48

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and be ready for spring. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

The Greatest Extremes of the Weather
Cannot Affect
Stephens
Structural Iron Paint

It is generally known that iron expands and contracts according to the temperature.

In Western Canada the temperature reaches such an extreme that in order to resist cracking and pulling off, the paint has to have the right elasticity as well as moisture-resisting qualities.

"Stephens" Paint has resisted the tremendous extremes of the Western climate for years and is especially adapted to such conditions.

Write us at once for color cards and agency proposition.

Gentlemen :—

We are pleased to announce that we were to-day favored with a visit from Mr. Bert Hamilton of Hamilton & Stott, of St. Thomas.

While here Mr. Hamilton on behalf of the firm of Hamilton & Stott completed arrangements whereby they purchased from the Jones Register Co., of Toronto, their entire stock of Jones Registers, floor registers, borders and faces, wall pipes and fittings, and everything connected with the heating business formerly owned by the Jones Register Co., of Toronto. From this date Hamilton & Stott will be successors to the Jones Register Co., of Toronto, and all Jones Registers furnished to the trade in the Province of Ontario will be furnished by Hamilton & Stott, of St. Thomas.

The Jones Register Co. still retain the book accounts, and all collections of the Jones Register Co.'s book accounts will be made by the Jones Register Co.

Yours very truly,

THE JONES REGISTER CO.

A. O. Jones, Sec'y.

Collins Paint Co.

Not a Single Complaint on Pratt & Lambert Varnishes in Ten Years

This letter **proves** Pratt & Lambert Varnishes **sell** through P & L advertising and varnish selling assistance which has **tripled** the sale of "61" Floor Varnish for P & L Dealers in three years; **tripled** the sales of Vitralite, the Long-Life White Enamel in less than one year. How much have your white enamel and floor varnish sales increased?

F. P. COLLINS PAINT CO.

White Lead, Paints, Colors, Varnishes, Oils, Turpentine, Brushes, Glass and Painters' Supplies

225 West Fayette Street
Syracuse, N.Y., December 12, 1911

PRATT & LAMBERT

Gentlemen:—We are glad to have the opportunity of expressing our appreciation of your **courteous** treatment and **hearty co-operation** in the sale of these celebrated goods. The writer has been identified with the paint business for upwards of twenty-five years, and is pleased to say that your several makes of Varnish seem to meet the needs and win the unqualified approval of our trade, not only in Syracuse but also in the many cities and towns of Central New York.

If there is such a thing as pre-eminence among your excellent brands, our trade would place Vitralite and "61" Floor Varnish a step in advance of the others. Reports from consumers indicate that these brands need no salesman. In the writer's experience as a dealer, he has yet to find there equal.

We are always glad to give credit where credit is due and assuring you that we are pleased to continue **pushing the sale of your famous products,** we remain, Very truly yours, F. P. COLLINS PAINT CO. FPC-W Per F. P. Collins (Signed)

Pratt & Lambert advertising is creating the same varnish selling demand in your town which will be greater than ever this Spring. You must decide for yourself whether or not you will take the sales and profits, but first, so you may consider the facts,

Make Yours a Canada Paint Store

Did you ever think of the convenience and advantage of having your entire stock of paints, varnishes, colors, stains and accessories all supplied by the same manufacturer? It gives your store a marked identity, and customers are impressed when they find that every package bears the name of one well-known manufacturer whose name and reputation for good quality have been established nearly fifty years. You can purchase anything you require of us, from calcimines to the finest enamel. Our sundry line is large enough to handle any demand. In addition you have the satisfactory knowledge that everything you buy of the Canada Paint Company is not only absolutely reliable, but represents the best value obtainable for the money. You know that any C. P. product may safely be sold to your most particular customers and will give them entire satisfaction in appearance and service. Why not make your store a Canada Paint Store? Replenish your old stock as it runs low with C. P. goods. When your entire stock bears the C.P. label you know you haven't an inferior article in your store. C. P. products are medium priced—neither high nor low—and pay as good a margin of profiit as any reputable goods can.

THE CANADA PAINT COMPANY

MONTREAL TORONTO WINNIPEG

Glidden

Challenges Comparison

Our terms are Sixty Days—some varnish houses give four months.

Why should you deal with Glidden?

There's just one answer, Mr. Merchant: The quality of the goods and the profits to you.

The Glidden discount is so much more generous than the discounts made by other varnish houses that *the discount discounts the terms.*

The discount we offer the trade on Green Label Varnishes, Stains and Specialties makes it possible for you to *make more money* absolutely regardless of four months'—five months'—or six months' terms, and Glidden's Green Label Varnishes are in a class by themselves.

Have you been reading our advertising in the painters' publications?

We challenge any painter in the land to send us a sample of any exterior varnish equal in quality to Glidden's M.P. Durable Exterior, or any interior varnish equal to Glidden's M.P. Durable Interior, or any floor varnish equal to Glidden's M.P. Durable Floor.

We are giving this challenge bold advertisement in the Master Painter, The Painter and Decorator, The Modern Painter, Practical Decorator, Painters' Magazine, Cement World, American Carpenter and Builder, etc.

That is the sort of challenge that shows *faith* in the quality of our goods, and the painters know it.

Write for our New and Most Generous Proposition to the Trade on Green Label Varnishes, Endurance Wood Stains, Endurance Colorspar, and Specialties. Use the attached coupon.

GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure

finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

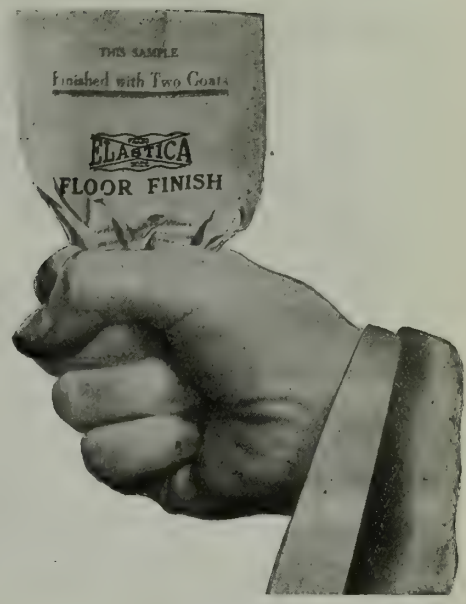
Our Business Is Built On a Rock

—alabaster rock, from which is made the only pure, permanent and sanitary wall-coating—

ALABASTINE



When a room is being papered or kalsomined you know the trouble and unpleasantness it involves—the rubbing and washing and scraping. And you know how soon Kalsomine decays and rubs or scales off. But **ALABASTINE** is a cement which hardens on the wall—becomes a part of it and does not need to be scraped or washed off when a fresh coat is applied. In fact, each new coat improves the wall.

Why not build up your trade on the alabaster rock which has been so sure a foundation for our success? We help with our advertising and supply you with catalogues, show cards, banners, tint cards and posters. But the greatest help is **the genuine value of Alabastine.**

Remember that Spring rush and ORDER NOW, direct or through your jobber.

The Alabastine Co., Ltd.

FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

Montreal, Dec. 4th 1905.
J. W. Harris Mfg. Co., Ltd.
Montreal, Que.
Gentlemen :—
It pleases me to be in a position to state that the "Zephyr" Ventilator placed on my chimney is giving me the greatest satisfaction
The smoke which we used to have in the house has completely disappeared, owing to the good work of your "Zephyr" Ventilator.
I remain, gentlemen,
Yours truly,
T. A. GAUTHIER,
128 St. Elizabeth St.

Watford, Ont. Rockford, Ill.

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

Poor Drills Will Not Make the Best Drill Press Efficient

The drill is the heart, the real vital spot, in all drilling jobs.

W & B Drills and Reamers eliminate the doubt of efficiency from good presses. They are known in progressive shops for their strength and toughness. They have real ability to lessen operating cost—increase production—and they therefore exert a favorable influence towards greater profit on output.

"W & B Diamond" Twist Drills and Reamers stay better, more accurate and have greater cutting ability—for a longer time than ordinary tools. They are guaranteed to possess just the right degree of toughness to resist wear and to resist breaking under severe duty strains. Made in both Carbon and High Speed Types. "W & B Diamonds" can be had of all large city jobbers. Write us for full details.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

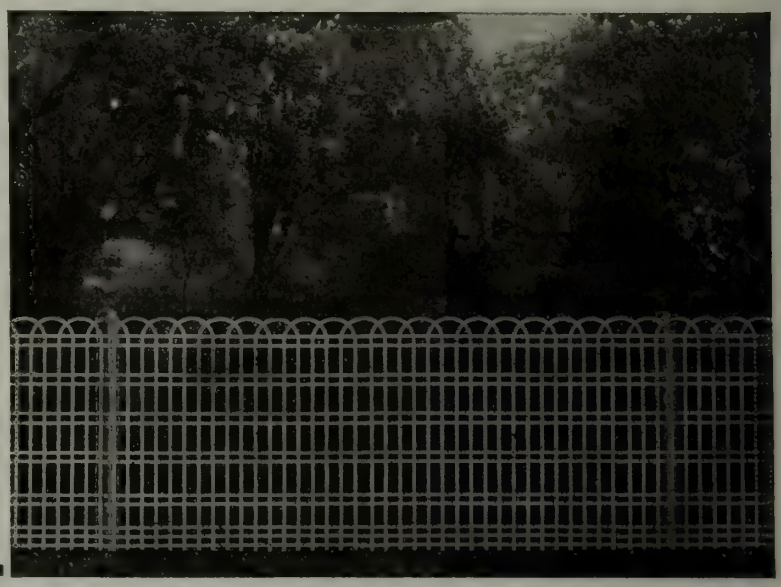
The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"



The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

130 Years' Experience

171-A Secret Process VANADIUM Steel
(Also Straight Back)

Extract from The LONDON DAILY TELEGRAPH

WHICH SPEAKS FOR ITSELF

As a matter of fact, the trade of which Sheffield is the centre has in the last year or two fought—and won—a notable fight. Germany was a formidable competitor; America a yet more serious one, in the matter of tools, and especially SAWS. The English makers set themselves to meet this sharp rivalry, availing themselves of a superior position alike in materials and highly specialized skill. They took full advantage of the technical schools, with their scientific teaching as to metals and the treatment of steel, and paid more attention than they have ever done before to design and finish. Their energy and enterprise won prompt recognition from the buyers for the retail trade, and within very recent days they have enjoyed the spectacle of seeing the agent of one of the most noted firms of tool-makers in the United States coming over to make a tour of inquiry as to what had come over English trade that they had lost it so entirely. The British manufacturers had, moreover, proved conclusively that, quality for quality, their products had nothing whatever to fear on the important matter of retail selling price, and their victory was complete.

IF you are not handling our Saws and Edge Tools, you are paying more for inferior goods. Does it pay you ?

Books for the Metal Workers

Any of the following books sent prepaid on receipt of price

WRITE FOR CATALOGUE

THE NEW METAL WORKER PATTERN BOOK.

A treatise on pattern cutting as applied to all branches of sheet metal work. By George W. Kittredge. 430 pages; 744 illustrations; size 10 x 13 inches. Cloth bound. **Price $5.00.**

ART OF COPPERSMITHING.

A practical treatise on working sheet copper into all forms. By John Fuller, Sr. 327 pages; 474 engravings; size 10 x 6½ in. Cloth bound. **Price $3.00.**

SHEET METAL WORK.

A manual of practical self-instruction in the art of pattern drafting and construction work in light and heavy-gauge metal, including sky-lights and roofing, cornice work, etc. By Wm. Neubecker. 267 pages; 358 illustrations; 6½ x 9¼ inches. Half-Morocco binding. **Price $3.00.**

A PRACTICAL WORKSHOP COMPANION.

For tin, sheet iron and copper plate workers. By LeRoy J. Blinn. 296 pages; 170 figures. Size 5 x 7¼ inches. **Price $2.50.**

SHEET METAL WORKERS' INSTRUCTION.

By Joseph H. Rose. 300 pages. Profusely illustrated. **Price $2.00.**

THE ROOFING, CORNICE & SKYLIGHT MANUAL.

175 pages; 170 illustrations and 13 plates; size, 6 x 9½ inches. Cloth bound. **Price $1.50.**

BAUGHMAN'S BUYER & SELLER COST TABLES.

A cost book for everybody having cost to figure by the piece, pound, foot or ton, from 2½c per hundred to $ 0 a hundred. Leather bound. **Price $1.50.**

TINSMITHS' HELPER & PATTERN BOOK.

With useful rules, diagrams and tables. By H. K. Vosburgh. A new revised edition; 120 pages; 53 figures; size 4½ x 6¾ inches. Cloth bound. **Price $1.00.**

TWENTIETH CENTURY SHEET METAL WORKER.

By H. E. Osborne. Gives short, concise explanations which should be easily understood by the young apprentice, and are sufficiently scientific for the practical use of the journeyman. 86 pages; size 5½ x 7¾; illustrated. Cloth bound; **Price $1.00.** Paper Cover; **Price 60c.**

PRACTICAL METAL PLATE WORK.

By Paul N. Hasluck. 247 illustrations; 160 pages. **Price 75c.**

TREATISE ON THE GEOMETRICAL DEVELOPMENT OF ROUND AND OVAL CONES.

With easy examples of their application. For the use of beginners and practical sheet-iron and tin-plate workers. By John Fuller, Sr. 52 pages; 37 figures; size 4½ x 6¾ inches. Cloth bound. **Price 75c.**

MENSURATION FOR SHEET METAL WORKERS.

As applied in working ordinary problems in shop practice. By W. Neubecker. 51 pages; 70 figures; 5½ x 7¾ inches. Cloth bound. **Price 50c.**

TABLES GIVING THE LENGTH OF BARS FOR SKY-LIGHTS, AND RAFTERS FOR ROOFS.

84 pages; bond paper; handy pocket size. Cloth bound. **Price 50c.**

THE METAL WORKER SHOP CARDS.

Made of Manila Board; 11 x 14 inches; eyeletted for hanging up in the shop. No. 1.—Table of the quantity of tin required for roofs. No. 2.—Table of the diameters, areas and circumferences of circles. **Price 25 cents each.**

EASY LESSONS IN ROOF MEASUREMENTS.

By W. Neubecker. Twelve lessons on figuring the amount of material required to cover a given surface in flat, hipped or irregular shaped roofs. 31 pages, 5½ x 8 inches; 12 illustrations. Paper cover. **Price 25c.**

HOUSE CHIMNEYS.

A series of articles on chimney troubles and their remedies. 62 pages; 5½ x 8inches; 40 illustrations. Paper cover. **Price 25c.**

MORE ECONOMICAL DELIVERY

That the motor truck will soon replace the horse and rig for commercial delivery purposes is the contention of a writer in MacLean's Magazine for April, who deals with "The Future of the Motor Truck." The trucks are now in general use in the larger centres of the United States and are rapidly growing in popularity in Canada. There is no question as to the better service which they provide; the only issue is as to the cost of operation. To merchants this is a vital problem. The facts, figures and conclusions which are presented in the article would seem to indicate that the motor truck will soon supersede the horse and rig.

Jardine Universal Ratchet Clamp Drill

Used in factories of all kinds for hurried machine repairs.

All machine shops and railway shops should have it.

Bridge builders, track layers, and structural metal workers have constant use for it.

Write for a Free Razor Strop

Any dealer in the country can have a New Torrey Honing Strop ---absolutely free.

WE know that every dealer in this country who sees and uses the New Torrey Honing Strop will immediately put in a supply and recommend them to his customers. That is why we are willing to prove the superiority of our strop by giving you one absolutely free. This offer is open only to those dealers who have not already received a strop free.

All you have to do is to write us the name of your jobber, and tell us that you want the strop and we will send it at once, absolutely free, except for duty. We will also send you our new proposition —we know it will interest you.

Write to-day to our home address, Worcester

A Proposition That Is Worth While

One that will fill your spare time with congenial work---bringing good money. Are you interested? You are. Well, here are the details.

Throughout Canada is scattered an army of men who are everywhere booking subscriptions for MacLean's Magazine. If you join them you can add very considerably to your regular income. If you are a hustler you will find it will pay you to give all your time to the work.

Some of our most successful salesmen were "spare time men" first.

STANLEY'S

Wrought Steel Screen Door Hardware

Set No.
1750

Each Set Complete in a Neat Box with Screws

DEALERS and BUILDERS alike are **PLEASED** with the high quality of the hardware and the convenient way it is packed ready for use.

Set No. 1750 consists of two 3 x 3 Ornamental loose pin Butts; one 5-in. wrought-steel pull; one No. 3 high-grade steel-wire spring, greatly superior to the ordinary screen springs; and one gate hook and eye. This is the very best set of screen hardware on the market, but sells at prices comparing favorably with other makes of greatly inferior quality.

Set No. 1752 is less expensive, but fully equal to the screen-door sets of other manufacturers. It is made up of two $2\frac{1}{2}$ x $2\frac{1}{2}$ Butts; one $4\frac{1}{2}$-in. pull; one No. 2 steel spring, and one gate hook and eye.

These sets are handsomely finished in Japan, Antique Copper or Dull Brass, or the new **"Stanley" Sherardized**, rustproof finish, which is just the finish for outside use. Packed twelve boxes in a carton, one gross sets in a case.

Send in your order now and be prepared for the Spring Business.

It's a Good Day's Work When You Make a Friend

"I want a razor," he says, as he steps up to your counter.

What do you do about it?

Do you follow the line of least resistance and take his money for whatever razor happens to strike him as the cheapest?

Or do you play the part of a real salesman? Do you consider the future, his interests and your own, and convince him, by good straight talk, that the

GILLETTE Safety Razor

is the razor that will give him for a lifetime the maximum satisfaction per dollar of cost? Of what other razor could you say this?

The most important result of selling a man a **GILLETTE** is that he will be delighted. Whatever razor he has been using before, the **GILLETTE** shave will, in comparison, be so much quicker, cleaner and more comfortable, that he will be grateful to you for recommending it to him. **You will have made a friend.**

Moreover, he will come back regularly for new blades—and come well pleased. Could you ask a better opportunity to do business with him in other lines?

And lastly, but still worth noting carefully, when you exercise your salesmanship and sell a "Made in Canada" **GILLETTE** for $5.00, your immediate reward is much more substantial that when you hand out a cheap foreign-made make-shift.

"THE NAME'S THE GUARANTEE"

BACKED BY

130 Years' Experience

171-A Secret Process VANADIUM Steel
(Also Straight Back)

Extract from The LONDON DAILY TELEGRAPH

WHICH SPEAKS FOR ITSELF

As a matter of fact, the trade of which Sheffield is the centre has in the last year or two fought—and won—a notable fight. Germany was a formidable competitor; America a yet more serious one, in the matter of tools, and especially SAWS. The English makers set themselves to meet this sharp rivalry, availing themselves of a superior position alike in materials and highly specialized skill. They took full advantage of the technical schools, with their scientific teaching as to metals and the treatment of steel, and paid more attention than they have ever done before to design and finish. Their energy and enterprise won prompt recognition from the buyers for the retail trade, and within very recent days they have enjoyed the spectacle of seeing the agent of one of the most noted firms of tool-makers in the United States coming over to make a tour of inquiry as to what had come over English trade that they had lost it so entirely. The British manufacturers had, moreover, proved conclusively that, quality for quality, their products had nothing whatever to fear on the important matter of retail selling price, and their victory was complete.

IF you are not handling our Saws and Edge Tools, you are paying more for inferior goods. Does it pay you ?

H&R ARMS Co

¶ Right in every hardware store is the most logical place for a line of reliable, accurate, and moderate-priced single guns.

For ridding premises of pests—snakes, rats, 'chucks and the many kinds of crop and poultry destroyers, the Harrington & Richardson single guns are specially suited.

¶ There is a large and growing demand for an economical and efficient weapon for just that purpose, as well as for occasional hunting.

Here's the gun:

TRADE H&R ARMS CO. MARK

TRADE H&R ARMS CO. MARK

Specifications, 12 to 28 gauge—26 to 32 inch barrel—ejecting or non-ejecting—fine black walnut stock—hard rubber butt plate—weight 5¾ to 6½ lbs., according to gauge and barrel. For black or smokeless powder.

¶ These guns are quick sellers. They are made and sold under the broad H. & R. guarantee of quality, reliability and satisfaction. With a few of these H. & R. guns in stock, the hardware dealer is equipped for a profitable and increasing trade.

Our 40-page catalogue is yours for the asking. It contains valuable selling points for every hardware dealer, and shows the complete H. & R. line. Ask for it now while you think of it.

Harrington & Richardson Arms Co., 715 Park Avenue, Worcester, Mass.

CONVERTED

The foundation upon which we have built a world-wide business is based upon our policy of seeking and curing troublesome bearings, and otherwise demonstrating the value and economy of Magnolia Metal.

Magnolia is not a *soft* metal; its factor of safety is far in excess of the requirements of any properly constructed bearing—and out-wears even brass or bronze, giving much better service. There is a lot of misinformation regarding "hard" bearings.

No matter how hard they are they go to pieces or give trouble when they get hot—which they generally do. Magnolia keeps cool, won't squash, stays put, and won't cut.

O. B. LITTELL
622 Pontius Avenue, Seattle, Was. December 7th, 1911.

Gentlemen:—I take pleasure in stating that I am a user of Magnolia Metal and have been for the past two years.

I have put Magnolia Metal to what I consider a thorough trial. The first place I applied the metal was to an Emery wheel travelling 1200 R.P.M., and it worked so well that I then applied it to a fan 1470 R.P.M. The next place was to the crank pin of my main engine, and having such good results I concluded to babbitt the cross head brasses. In all the places the metal was applied, not one bearing has been taken up over 1-16-inch, and has run from 12 to 18 months.

I have come to the conclusion that Magnolia is surely a riddle; it can be worked like lead and still be as tough as it is.

I was somewhat afraid to try it in my main engine, because I thought it was too soft to stand up to the work, but I have a different opinion now. I have been following this line of work for over twelve years, and am sorry that I did not have an introduction sooner.

Yours respectfully, ALLEN J. STOCKS, Engineer in Charge.

SPECIAL OFFER

FORD AUGER BITS are years ahead of competitors

It has always been our aim to manufacture a bit that would be better than other BESTS. We've succeeded. Tests have proved it. Tests made by men who used the same bit for years—thought there was none like it—wouldn't use any other, but heard so much of the FORD and its wonderful Patented Concave Twist that they tried it—working it alongside of their favorite bit. Lo, and behold, the FORD did BETTER WORK at almost DOUBLE the SPEED. This meant money to them—money in both time and quality of work. They used the FORD again and were further convinced of its superiority. To-day these men and thousands of other discriminating workmen use the FORD in preference to all others.

Easy and Profitable to Sell

Our terms allow you a generous profit and our advertising will create a demand and make sales easy for you. Each FORD Bit is backed up with our solid guarantee, and any dissatisfaction will be speedily made right.

Ford users are profitable customers, for once you sell a man a FORD you've secured a steady buyer. We want you—we'll help you. Will you write us? We'll send you a handsome illustrated catalogue, descriptive circulars, our terms to you, and name of your nearest jobber.

Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In "The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.

How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

GET READY TO MEET

BIG DEMAND FOR THIS MACHINE

HOUSEKEEPERS are learning more thoroughly every year the possibilities of the Enterprise Cherry Stoner. Where one was sold five years ago ten are sold to-day. And where one is sold to-day ten will be sold five years hence.

The fact that the Enterprise Cherry Stoner is an indispensable household machine makes it indispensable to your stock. The name

ENTERPRISE

on these Cherry Stoners, as in every article that leaves the Enterprise plant, stands for the best obtainable service.

ENTERPRISE CHERRY STONERS do rapid and effective work. They are far easier to adjust than other machines, and the jaws absolutely retain their position when set. The parts of these machines are interchangeable.

It is an absolute certainty that you can readily make sales for these sterling machines among your trade. The fact that every family should have them makes them ready sellers.

In every respect they are up to the high quality of Enterprise Meat and Food Choppers, Sad Irons, Sausage Stuffers, Coffee Mills, etc.

The Enterprise line is the most profitable for you to handle, because Enterprise quality has made it the most popular—the most called for.

Arranging the Store for Spring Trade

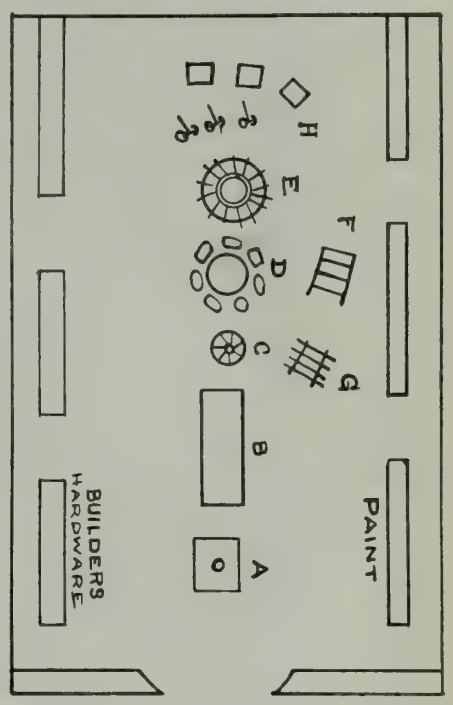
Certain Classes of Goods Should Now be Relegated to the Background, and Others Should be Brought Prominently Forward—The Danger of Overcrowding—Wide Variety of Articles Can be Effectively Shown if Only Samples are Placed in the Showcases—The Reserve Supply May be Kept Out of Sight.

This is the period of transformation. Outside the snow has gone, and the trees are commencing to show signs of life. Nature has put away winter things, and is bringing out her spring attire.

This metamorphosis is just as necessary inside the hardware store as out of doors, if the best results are to be secured. The winter goods must be put to the rear, and the spring goods brought to the front. None will deny the wisdom of this, but many there are who will point out that this is a hard thing to accomplish. And indeed it is so, for the number of spring lines are many. If all these were brought forward there would be wild confusion in the store, and confusion means lack of efficiency in the shop as well as on the deck of the sinking ship. The small boy at the party, who remarked that a little too much was just right, spoke only from a gastronomical standpoint.

Danger of Overcrowding.

Undoubtedly the question of arranging spring lines is a difficult one. Many a display has been spoiled by overcrowding; this, indeed, is the danger when the desire is to bring prominently forward the class of goods most suitable to this season. There is a retailer who believes it good business to get something of everything he carries into his store. He is successful, but it is in spite of his windows, not because of them.



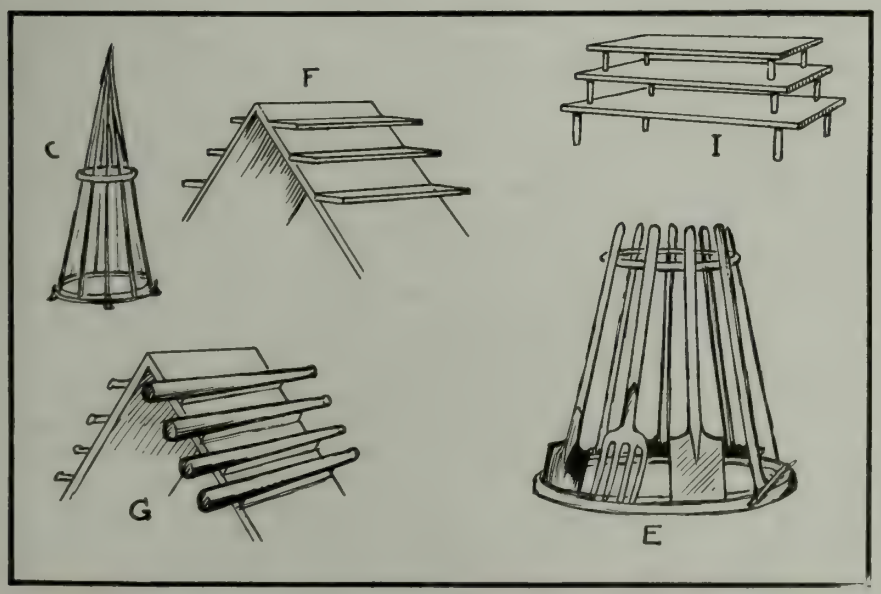
No, crowded effects are to be avoided. Yet it is wise to bring spring lines to the front. How then is this to be done without confusion?

Much depends upon the store, of course, but it may be possible to give some suggestions for the type of store which is perhaps most common. Many of these suggestions are merely illustrations of what has been seen in hardware establishments where there has been a genuine effect made to bring the proper class of goods forward properly. There will be some schemes suggested which will be impossible of adoption to many. It is always so. But even the suggestions which cannot be acted upon may yet not be barren of profit. They will not be if they cause the retailer to think of some other scheme by which he can obtain a like result.

Must Not Overlook Paint.

One thing is pretty generally recognized to-day; it is that the dealer serves his own best interests by keeping paint well to the fore. Spring is the great paint season. The demand is heavy now, and it is merely common sense to keep the goods where they can be readily seen, and where they will suggest a purchase to those who had not thought of buying.

Builders' hardware, too, cannot wisely be relegated to any inconspicuous place. Last year was a record building year. This year, it seems, a new mark is again to be established. From all parts of the Dominion comes news of building. For all the inside fixtures—the door-knobs, the hinges, the catches and the locks—there will be a heavy call. Indeed this call has already been heard. Builders' hardware then, in nine stores out of ten, should be kept well forward.



A suggested arrangement for spring goods. A—showcase around pillar; B—silent salesman with sporting goods; C—fishing pole rack; D—oil stoves around circular radiator; E—garden tool rack; F—motor boat stand; G—bat rack; H—space devoted to lawn mowers, etc.; I.—table with kitchenware.

Remember Sporting Goods.

There is one store in which these facts have been borne in mind. On one side of the front door is the paint department, and on the other are to be seen cases and shelves displaying fine samples of builders' hardware. One window is given up to a paint display, in another is a sporting trim showing samples of many lines needed at this season by sportsmen.

With this much space given to the two staple lines, it may be asked what can be done with the other goods which must be prominently displayed at this season if the sales are to be as large as possible. Well, the task is not an impossible one.

In a Montreal hardware store a post stands about ten feet in from the door, helping to support the ceiling.

Ingenious methods of displaying spring goods in the store.

It might be thought this would be somewhat in the way, but it has been so utilized that it is not noticed. Around this post a glass case has been built—the cost was not great—and in this case are shown samples of silverware. A customer might not see exactly what was wanted from this necessarily somewhat small selection, but it is certain that enough will be seen to make one desirous of seeing more—and there is more to be seen in a showcase placed nearer the rear of the store.

Only Samples are Shown.

Further back in this store, in the position indicated in the accompanying cut, is a silent salesman, in which is arranged a fine display of sporting goods—one of the particularly good lines during the spring and summer. No attempt is made to more than show samples here. The stock is kept further back in the store.

Behind this showcase stands a circular radiator. That might seem to break the floor space, but it has been utilized as a stand. About this radiator are arrayed metal and wire doormats. Every one knows how they are needed in the spring. Show these prominently and the sales will come. As well as the door mats, coal oil stoves are shown here. Only three or four are ranged about this radiator. They do not occupy any great amount of space, but they enable all passing to get an idea of the stock carried. It is necessary that these stoves should be shown at this season. Ordinary heaters may be relegated somewhat to the background, but coal oil stoves are especially wanted in the spring and early summer months. Good results are to be secured by bringing them prominently to the attention of all coming into the store.

Showing Fishing Rods.

In another establishment a neat method has been adopted of displaying fishing poles. A stand has been made which permits of the rods being arranged in the form of a pyramid. By this device not a square yard of floor space is occupied, yet the sportsman can see at a glance a score or more of the rods carried. He will be a hard man to please who does not see among this number some such rod as he wants.

But spring is a time for garden tools, too. Garden tools can occupy a great deal of space—also properly arranged they can be shown with economy of floor room. A good method is to install a stand like that upon which the fishing poles are arranged, but somewhat larger. Around this spades, rakes, trowels, hose reels and such lines may be grouped, and the whole space occupied will not be great.

Motor boat and automobile accessories are other lines which move particularly well at this season, when autos are being brought out of garages and when motor boats are being put into the water again. In one store where a good sale of these is reported, the manager has placed upon his floor a stand, shaped much like the stile which used to afford an easy means of getting over a fence. On the steps of this are arranged wheels, carburetors, spark plugs, and a wide variety of marine hardware. Again the space occupied is not great.

Then there are baseball bats. A store which establishes a name for carrying a wide variety of these may count upon a good trade the summer through. Boys and men will come to that store to buy. They will tell their friends of the fine selection they can get, and still more business will come.

There are different ways of showing bats. In some stores little compartments are made along the counter, one line of bats being kept in one compartment. Not a great deal of space is taken in this way, Another method is to make a stand in stepladder form. Grooves in this will enable bats to be laid across much like steps. A purchaser then can take in at a glance the various models. He can pick up the bats—examine their grain and try their weight. The examination will cause little or no disarrangement, and the one selected can quickly be replaced from the stock kept elsewhere.

Household goods must also be shown. A hardware store to-day, while it need not keep the rule of the sea—"Women and Children first"—must yet not forget the women, and kitchenware appeals especially to them at this time.

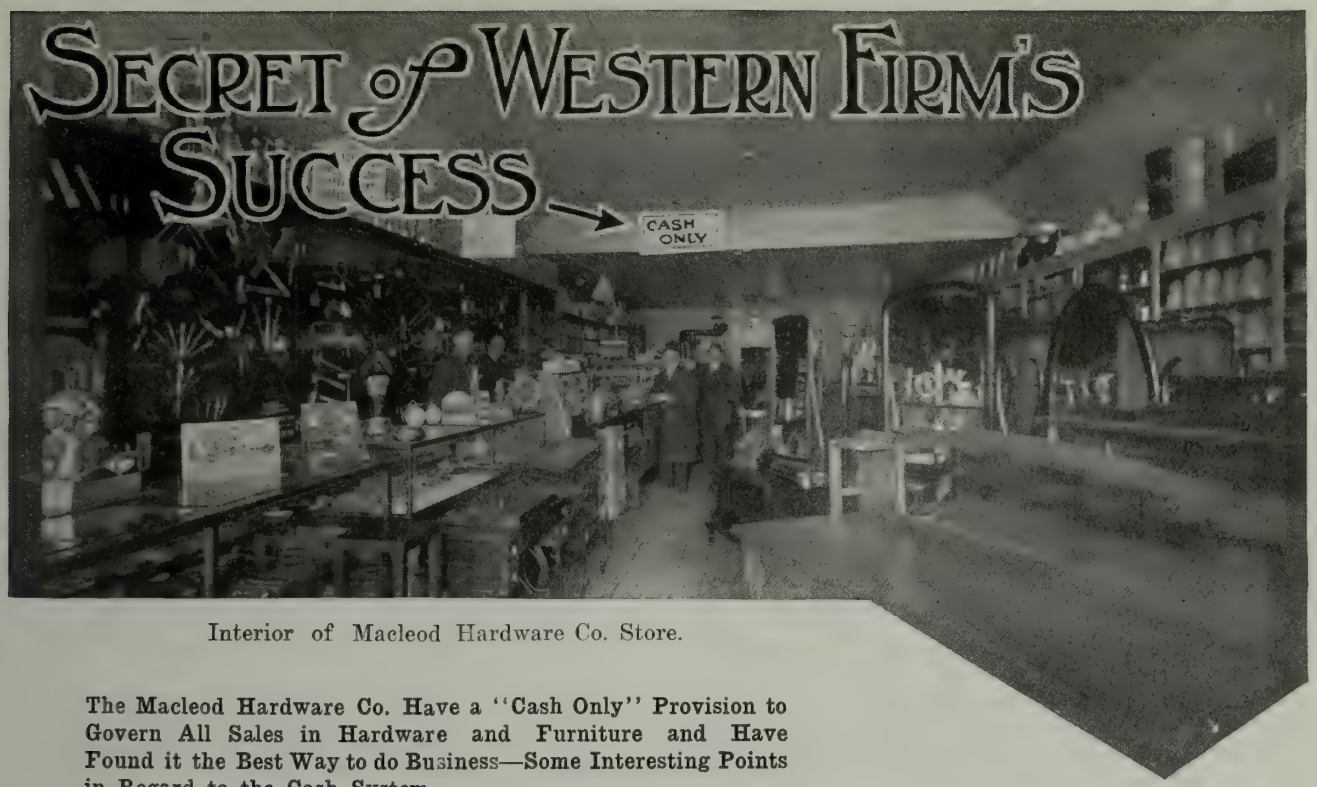
A series of tables, one built on top of the other in pyramid style, enables a wide variety of these lines to be shown. Such a stand is not costly. It may be made indeed by an ingenious clerk.

All the spring lines cannot possibly be brought to the front of the store, but they can be so placed that even those near the back will get their proper share of attention. The thing is to make one display lead a person naturally on to another, so that the customer who has come in for some trifle will walk back to see what is shown. In this way, if refrigerators, lawn mowers, and such lines have to be placed near the back, they will not be lost. The eye will be carried back from one display to another, and all who are interested in lawn mowers and refrigerators—and they belong to the legion family at this season—will see what they want. They will walk a few steps back and examine the samples shown.

Fixing the Selling Price

The discussion on the fixing of the selling price continues and a number of interesting communications have been received. An advocate of the method of reckoning the cost of doing business and the profit on the cost price of the goods, is Geo. Landreth, of Landreth Bros., Lemberg, Sask. He writes as follows:

"In reading your articles on fixing the selling price, it strikes me as if most of the people who disagree with you are under the impression that all earnings should be figured against the amount invested, whereas you do not consider the amount invested, but figure that a man does not make his percentage until he has sold the goods, and so, therefore, does not realize until same are sold. 'There,' he can say to himself, 'I have made 10 cents on that sale,' if he is making ten per cent. on a one dollar sale.



"Owing to the practice that earnings are reckoned against the amount invested as a percentage, people are under the impression you are wrong, and you are if it comes to declaring a percentage of earnings in a stock company, unless you take the earnings by themselves and declare another percentage on the amount invested.

"In your way of figuring one has only to keep track of the amount of goods sold to know what he has earned or made; that is, providing there are no leaks and that all goods are sold at a certain rate (percentage). For instance: Volume of business is $10,000, percentage 10; therefore net earnings are $1,000, if there are no leaks, which is doubtful. But if the merchant has a $5,000 stock (paid for) he has realized $1,000 on his $5,000 investment, so therefore he has made 20 per cent. on his investment the usual way of figuring.

"If I am wrong in this I do not see it, but I must say you could not say to a bunch of shareholders, we have only made 10 per cent., when you really have made 20 per cent."

Yours truly,
Geo. Landreth.

Secret of Western Firm's Success

Interior of Macleod Hardware Co. Store.

The Macleod Hardware Co. Have a "Cash Only" Provision to Govern All Sales in Hardware and Furniture and Have Found it the Best Way to do Business—Some Interesting Points in Regard to the Cash System.

One of the best known merchants of the world has predicted a mercantile millenium when, in the course of time, the cash system becomes universal. If all dealers went strictly on the cash basis, conditions of trade would undoubtedly be wonderfully improved. The wholesaler and the manufacturer would not have to wait for their money, the dealers themselves would be saved the burden of financial worry, failures would be reduced to a minimum. Things would not be so ideally beautiful from the standpoint of the consumer, who would have to break Desire and Immediate Means into double harness and make them trot along together; but there would be no question as to the advantages from the standpoint of the merchant; no question whatever.

In the meantime, some dealers are not waiting for this trade Utopia to be established. They have determined to anticipate it and are putting into practice the system which would help so much to bring it about.

"Cash only" is the sign which the Macleod Hardware Co., of Macleod, Alberta, have hung in a commanding position in their store. It is in plain view of all who enter and it states the terms on which all transactions in the store must be based. It is some time now since the firm put this sign up, and they certainly have no intention of taking it down. The "cash only" policy has proven an eminently satisfactory one.

It must not be assumed from the heading that this is the sole secret of the success of this Western firm. On the contrary, a share only of the credit can be attributed to this cause. The members of the company, T. M. Paulson and B. E. Spink, are practical business men, with a full share of the energy and vigor which are deemed essential qualities in the West. They have infused these qualities into the building up of their business. The fact that they trade on a strict cash basis has been a strong factor, however, in their success and has steered them around many of the shoals which always confront the beginner in business.

An Agricultural District.

The experience of the Macleod Hardware Co. has a deep significance on two counts. It is often claimed that the hardwareman who is located in an agricultural district, cannot successfully run a cash business. The argument is advanced that the farmer does not possess a steady source of income and cannot, therefore, be expected to pay cash down the whole year around. The farmer's money rolls in after harvest and he then "squares up" the accounts which have accumulated during his "off seasons." This consideration has kept many dealers from attempting a cash business who otherwise would change over without hesitation.

Macleod, Alberta, is situated in a splendid agricultural country. The term "sunny Alberta" applies with exactitude to the conditions which prevail in the wheat lands lying around. The consequence is that a good share of the trade of the Macleod Hardware Co. is farm trade. The "cash only" stipulation has not hurt it. The wheat raiser from the country pays down his cash as readily as the townsman.

Is it, after all, largely a matter of habit? The farmer likes to charge goods it seems; and he generally has a balance at the bank all the time. If it is necessary to pay cash, he is willing to produce it.

A Furniture Department.

Another obstacle which has kept many dealers from making the change from credit to cash is the difficulty experienced in exacting full and immediate payment for certain lines of goods—stoves, for instance. Some dealers do large contract trade in builders' hardware, and they are adverse to changing their system because they fear that the new scheme could not be applied to that branch of their business. With some men it is one thing, with others it is another.

The Macleod Hardware Co. have, like many other Western hardware firms, a furniture department. Now if any business is difficult to run on a cash basis it is furniture. People must have furniture, whether they have the wherewithal to pay for it or not and, just as sure as there will always be impecunious parties in the world, there will always be a demand for furniture on the so-much-per-week plan.

Nevertheless, the "Cash only" sign which regulates the sales of hardware in the Macleod Hardware Co. exercises

(Concluded on page 38.)

STRENGTHENING THE MAGNET.

What is the use of a show window? Generally this is believed to be the sample of the store; the eye, not through which the store looked out, but through which the people look in. The window is an indication of what is to be seen inside. But it is more than this. It is one of the store's magnets—one of the forces which draw people to the store.

This phase of window dressing deserves some consideration. The retailer must present his goods in such an attractive way that they will arrest attention, and draw people to inspect them more closely. But there is an agency outside of the mere goods which some men have used to make their windows attractive. They give room to signs, not immediately relating to the store, but of genuine interest to a large part of the people whose custom they have or hope to gain. There are some who do not believe in this—and doubtless in certain places this would not be advisable—but properly regulated the system of putting forward signs, bearing information about things of interest to the general public, does a store good.

People notice these cards from across the street, and walk out of their way to see what is to be learned. After satisfying their curiosity, they look at the goods in the window. If the display is well arranged—and, of course, the notices must not be allowed to interfere with this—many people will see something which they want. They will perhaps buy, or will say something about the goods which will induce others to buy.

Let people once get to know that signs bearing news of general interest are to be seen in a certain store window, and many of them will go out of their way to pass that store. Much attention will be gained. The magnet will have been made more powerful, and the educational qualities of the window will not have been spoiled, if discrimination has been shown in the class of announcements which are given window room.

RECKONING OVERHEAD EXPENSES.

The question of fixing the selling price and figuring profits is a live one, judging from the interest which hardwaremen are taking in the discussion which has been conducted through the columns of Hardware and Metal. Quite a number are still unconvinced, however, that the proper way is to figure profits and overhead expenses on the selling price.

The fallacy of figuring profits and cost of doing business on the cost price can be best illustrated, perhaps, by quoting the experience of a dealer who followed that system. He was doing a $40,000 dollar business, and he reckoned his overhead expenses to be about $7,500 or about 18.7 per cent. In figuring the selling price of his stock, he added the 18.7 per cent. to the cost price of the goods and then tacked on his margin of profit. He made the grave mistake of forgetting that his expenses totaled that percentage on the selling price, not on the cost price. Thus, instead of allowing 18.7 per cent., he probably allowed considerably less than 10 per cent. on most articles and was creating a deficit of something like $4,000 each year, which had to be made up out of the margin of what he assumed to be his profit. The result of this blunder in accounting was that his profits were growing smaller every year, despite the fact that his business was growing.

AS TO THE FUTURE OF METALS.

A careful consideration of the metal market at the present moment is sufficient to make all interested pause to consider what the future will be, and what they had better do now in view of that future.

See what conditions are. Tin high and apparently going higher. Iron exceedingly scarce in Canada, and orders from Canadian houses being refused. Copper stocks low and prices high. Spelter almost unobtainable; lead scarce; and antimony in greater demand than usual, with a smaller supply on hand.

It is a difficult situation to fully comprehend, but the signs seem to point toward a higher market for one and all the metals. True, copper is higher now than it has been for a long time, but it is also true that the supplies are lower than is usual at this season, and the demand is great. Seventeen cent copper is looked for, and if it comes a general advance on all products will have to be made.

When iron seems likely to advance at this season the situation is indeed strange. But iron does seem quite likely to rise in value on the Canadian market at the present time. The supply is small here. English shippers have been exhausting their stock during the strike. Now they will want to refill their warehouses. This will take a certain amount of their new product, which will result in the supply on the market being smaller than the demand, the higher prices to meet the demand. Moreover, the higher prices which are being paid for coal will make production of this and almost all other metals more costly. It seems certain that higher figures must be asked before long.

KEEP AHEAD OF THE SEASONS.

The dressmaker and milliner know the styles which are to prevail in a certain season long before the public gets any inkling. They are prepared well in advance of the season. It is the same in all lines of trade, and commerce. Everything which is to be offered to the public must be prepared quite a time before the date of presentation. The theatrical magnate begins to plan in early spring the attractions which he will offer in the fall and winter. The magazines plan their stories and features several months in advance. The manufacturer is striving in 1912 to find new ideas and models to offer in 1913.

The retail hardwareman must follow the same policy of keeping ahead of the trade. To get best results, he must know just what he intends to do, what stock he

is going to handle and how he is going to handle it, quite a little time before demand for those lines is felt. For instance, he should prepare now for the trade in wedding presents, which will start late in May and continue right through June and July. In a short time also, he should begin to plan his harvest tool campaign. Although little seed is yet in the ground, the time will soon roll around when the farmers will start to thresh.

Much has been said on the subject of the wisdom of preparing well ahead of time. The admonition cannot be made too strong, however. Haphazard merchandising, taking trade just as it comes, season after season, brings the dealer just the amount of trade that arises from sheer necessity. No demand is created. On the other hand, the dealer who plans out everything ahead of the seasons is bound to "work" all lines to the fullest possible extent.

ARRANGING THE HOLIDAY SCHEDULE.

Soon straw hats will be making their appearance, and spring will be on the wane and summer approaching. The days will be hot, and thoughts of summer vacations will fill many minds. This is a state of affairs which may be expected, and the hardwareman will do well to make his preparations accordingly.

These dealers who employ a number of clerks might well arrange in advance the date upon which the staff will go away for their holidays. The dealer will then know during just what seasons he will have a short stah. He will be able to prepare in good time, so that all may be in readiness when this short-handed season arrives.

Arranging the holiday schedule well in advance is of advantage to the employer in other ways. It prevents disputes among the clerks as to who shall go on a certain date. It enables the clerks to plan their trips; and instead of their being any discord among them there will be a feeling of expectancy. They will give more enthusiastic, more whole-hearted service.

A PROOF OF CONFIDENCE.

Writing to Hardware and Metal, a Western hardwareman says: "We are expecting the biggest year on record, and are stocking up for a heavy trade."

It is the surest proof of confidence on the part of the dealer when he shows it by ordering heavily. The dealer who lays upon himself the responsibility of selling more goods than ever before, is convinced in his own mind that conditions of trade are going to be such that he will find no difficulty in increasing his sales.

The dealer in question is located in a Western city which is experiencing a steady growth, but is not "booming," in the ordinarily accepted sense of the word. There is no feverish building activity to guarantee a record demand and yet the hardwareman is thoroughly convinced that trade is going to break all records.

It is a healthy sign. Corrobative evidence is not lacking by any means. From all sections of the country come reports which bespeak activity and soundness in trade conditions.

TAX ON MAIL ORDER HOUSES.

At the annual meeting of the Retail Merchants' Association of Canada, report of which appears elsewhere in ciation of Canada was a lengthy discussion on the mail order question.

N. C. Cameron, of Goderich, Ont., has been making an extensive study of this problem, and he claims to have a solution in a tax or license on houses which sell by catalogue outside of their own communities. He says the law could be enforced in the same manner as the liquor license law, where the Government collects a percentage of the bar receipts. Each hotel proprietor must give a sworn statement of his bar receipts. Mail order houses would, under Mr. Cameron's plan, be obliged to make sworn declarations to the Government of the amount of business done in each municipality. The tax would be a certain percentage of that amount, and would go to the coffers of the various municipalities.

That there will be much opposition to such a measure is beyond a doubt, and it is a question which should be given much thought before a definite proposition is presented to the Legislature.

A number of other important discussions took place, chiefly on Legislative matters, and these discussions certainly demanded a larger attendance. If, as one of the members expressed himself, merchants could have known what was on the bill-of-fare, more would have been present.

POINTED EDITORIALS.

It is his ability to get the "extra margin" of trade which makes or unmakes most merchants.

* * *

"Cash only" is a good motto for the retail dealer. One cash sale is worth two bad debts on the books.

* * *

"Get your goods out in full view," is the advice of a well-known hardwareman, to further the sale of seasonable lines.

* * *

Winter goods left in stock are now being put away. When they are brought out again, in the fall, the care or lack of care taken in the storing will be very evident.

* * *

Feature brushes and other paint accessories. This is one of the surest awys of building up a good paint business.

* * *

If a sport enthusiast becomes interested in an article, he is likely to buy it, despite the price and other considerations. The secret of big sales in sporting goods is, therefore, to arouse the interest of the sporting fraternity.

* * *

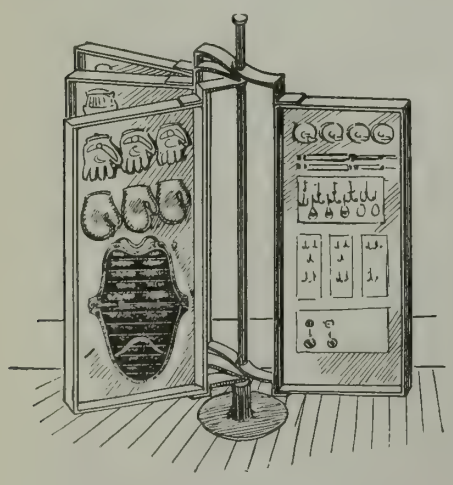
Many retail dealers still figure their profits on the cost price, judging from communications received by Hardware and Metal. This system may be followed successfully, but it possesses drawbacks which are avoided by figuring on the selling price.

* * *

In arranging the holiday schedule, Mr. Dealer, don't forget that hard-working, worried and faithful member of the staff, the proprietor. He needs rest and relaxation the same as the others, and should have it. Don't think that the store can't get along without him. The absolutely indispensable man has never yet been found.

* * *

Although the headline is one of the most important parts of an advertisement, a great many retail advertisers dispense with it entirely. An ad. without a good headline loses at least half its strength.



Arouse the Interest of the Sport Lovers

The One Sure Method of Holding the Trade in Sporting Goods—Why Not Hold a Spring Opening Day?—How One Dealer Went About It—Proper Display is a Strong Factor—Two Convenient Devices Shown.

"All work and no play makes Jack a dull boy," is one old adage to which practically all members of the male sex unhesitatingly subscribe. Outdoor sports of all kinds are the main interest in life of healthy boys; and the speed with which men turn over to the sporting page of their morning paper is pretty positive proof that the same passion survives through years of maturity. It is no anomaly for the keen business man of the morning and early afternoon to become an ardent baseball fan at 3.30; it is just human nature.

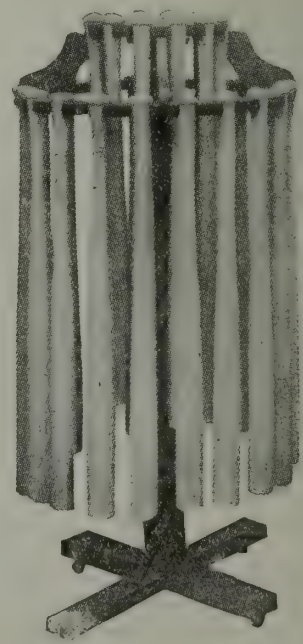
For all of which reasons the sporting goods trade is well worth the attention of the retail dealer. Of late years the trade has been drifting more and more toward the hardwareman until now it is pretty generally recognized that the hardware store is the place to go for sport supplies. It is important that the dealer should "nail it down," when he has the opportunity, for this branch of his business is too good to lose. "What we have we'll hold" should be the motto of the hardwareman.

To hold the trade in sporting goods entails the devotion of considerable time to that department. The secret of success is to make that part of the store interesting to sporting goods customers. The sport devoteee is an enthusiast above all else. If his interest is aroused on visits to the hardware store, he will keep on visiting it. A good stock well displayed will arouse his interest. The sportsman loves to handle and examine anything pertaining to sport and will frequently be led to indulge by that means in purchases which he had not intended previously to make. Perhaps the strongest inducement to hold out for the trade of the sporting fraternity is to have a member of the staff well versed in sports. A clerk who can talk hunting to local nimrods, discuss the ways of the "speckled beauties" with angling devotees and argue big league averages with baseball fans, will always be a magnet to attract sporting goods trade.

Swinging Rack for Small and Flat Articles.

The Spring Trade.

The spring is the "big season" in sporting goods. The dormant enthusiasm of the sport lover is aroused when the first signs of warm weather appear. It is important, therefore, that the dealer should pay special attention to this trade during the spring season.



Why not hold an opening day? This is done in other lines—in paints, stoves, Christmas goods. The writer recalls the experience of a dealer in Western Ontario who adopted this plan three or four years ago. He selected the first of April as the date, and advertised the opening extensively, running a series of snappy ads. calculated to attract the attention of sportsmen. On the night before the opening day, the staff got to work and arranged the stock to fit the occasion. A large table was shoved to the front of the store and on it was placed a variety of articles, such as baseball and cricket gloves, deckers and masks. Three ropes were strung from the top of the shelves on one side of the store to the top on the other. Deckers and gloves were attached at intervals on the first rope. Tennis rackets were strung along the second and the third was used for the display of baskets, reels and other supplies sacred to the gentle sport of Izaak Walton. Racks with bats, lacrosse sticks, fishing rods and guns were placed as near the front of the store as possible. All other lines were obscured more or less by the prominence thus given to sporting goods, but it was for one day only. The following night the store was rearranged in the old order. In the meantime, however, practically every sport enthusiast in town had visited the store and a record day's sales had been the result. So satisfactory had the opening day been that the dealer has repeated the operation each year since and is getting better results every time.

Proper Display.

Proper display of sporting goods is a strong factor in creating sales. At the same time, there are few problems which present more difficulties. It is not an easy matter to devise methods for showing gloves, baseball bats, tennis rackets and fishing rods. Many dealers have given it up and just put the goods in anyhow, heaping the "deckers" on a counter and placing the rods and bats in a convenient corner.

Two simple and effective methods of displaying goods are shown in the Sporting Goods Dealer. The first is a folding display rack for small articles or large flat articles. The rack should be made of soft wood covered with cloth or felt. The articles can be fastened on firmly with wires or tacks. The upright can be made from an ordinary piece of gas pipe, with a heavy piece of iron casting for a base. The supports at the top and bottom can be made to fit within each other in such manner that the panels will fold up. When closed the rack would occupy very small space. The different sections swing easily either way, so that while the customer may be waiting for a package he may inspect several of the surfaces crammed full of articles that he may be interested in. Fishing tackle, baseball gloves, golf balls, pocket knives, hunting knives and small supplies of almost limitless variety may be shown and the articles can be changed with the passing months so that the display will always be seasonable.

The second rack is for the display of baseball bats. It consists of a base on

A Rack for Baseball Bats.

rollers, with a firm upright, to the top of which two revolving wooden discs are securely attached. The bats are hung in notches in the outer edges of these discs. The smaller disc sets higher than the larger, so that longer bats than those in the outer disc may be held in it. Three dozen bats can be held in the rack at a time, and yet the pivotal bearing used in the revolving construction makes it possible to turn the heavily loaded discs easily. The rack is so constructed that when not in use it can be taken apart without the aid of a tool and placed in a box the size of a woman's hat box for storage.

It is well for the hardwareman to consider all such schemes for display. Without some such devices, he will find it impossible to display the goods to such advantage that sport lovers will consider a visit to the store interesting.

Hardware Store Publicity

Chapter 7—The Headline.

The headline is undoubtedly one of the most important features of an advertisement; and yet, strange to say, there are few retail advertisements which can boast a headline of any kind. This may sound like a paradox, nevertheless it is a fact.

The headline is the opening statement in the advertisement, the part which the eye first encounters. It is set in larger type and is supposed to bear somewhat the same relation to the rest of the ad. that the headline in a news paper does to the body of the article. But, as stated before, a large number of ads. have no headline at all. The writer became convinced of this sad truth on going over a bundle of retail hardware advertisements in search of material for this article. Only a few of the ads. had anything which could be called a headline. A great many of them started off with the name of the firm, thus:

JONESVILLE HARDWARE CO.
E. K. Smith, Manager.

Quite a number started off with the word "Hardware," or in a few cases "Smith's Hardware." A few more had gone just one step further and began with such introductory words or phrases, as "Wire Fencing," "Paints," "Stoves," to indicate the particular branch of the hardware business to be taken up in the ad.

In the real sense of the word, these are not headlines, any more than the name of a newspaper could be used as a heading for an article. If the editor of a daily paper put the word "news" at the top of a column, every reader would appreciate the fact that what followed was in the nature of news but there would be no inducement to find out what the article contained. The editor who got his paper out in that style would not be voted a success and yet he would not be more at fault than the hardwareman who puts the word "hardware" across the top of his advertisement.

It is equally bad to start the advertisement with the name of the firm. Interest the reader in the proposition and he will want to find out the name of the firm offering it. Telling him the name of the firm does not necessarily arouse in him any curiosity as to the nature of the proposition which follows. In this respect, a lesson might be learned from that ubiquitous, sometimes derided, universally avoided, and yet capable and energetic member of society, the book agent. If the book agent opened up with the bald announcement, "I'm selling books," he would "get the door" before he could say another word. The wily agent knows that his chief hope is to interest his prospect before he lets the latter find out what his business is. Accordingly, he begins something like this: "You are a busy man, Mr. Blank, and I suppose you haven't had an opportunity to travel and see the world as much as you would like. A man with a big business to look after can't go wandering off on long trips, I know. But you can enjoy all the benefits of travel without the discomforts by reading So-and-So's travel lectures——" and so on.

That is salesmanship. Now the ad. writer is a salesman. He is striving to interest the public in the article he is advertising. He is striving to make his ad. stand out from the great mass of news and advertisements which makes up the modern daily newspaper so that the eye of the busy reader, in skimming through (the average reader "skims" rather than reads) the pages, will pick it out, pause and peruse it. It is no mean task.

The importance of the headline will, therefore, be seen. It decides the fate of the ad. If the headline interests, the reader stops and looks over the ad. If it contains none of the elements calculated to interest, the amount of attention attracted will be correspondingly less. What chance, then, has the benighted ad. writer who cannot resurrect from the storehouse of his imagination anything more original and striking than the word "hardware?"

Writing a Headline.

In writing a headline, the first rule to be borne in mind is that it should tell the story of the ad. in the same way that the newspaper heading sums up the story which follows it. Some advertisers believe in writing the headline without any regard to the rest of the matter, on the principle that, if you interest people at the start, they will continue right through to the end. Novelists sometimes do this. But the author's license does not extend to the ad. writer. When a person is plunged into the perusal of an advertisement of kitchenware through the medium of a headline which read, "Shot from the mouth of a cannon," he feels that he has been tricked and is resentful.

Write Headline First.

Some good ad. writers seek for a headline first and then write the advertisement to fit it. If they are sufficiently clever, they can succeed by that method. But it is a cart-before-the-horse way at best and generally leads to a disjointed, illogical and unconvincing advertisement. The logical way is to write the body of the ad. first and then prepare the headline from what has been written, summing up the whole story in the fewest words possible. It should be borne in mind that the newspaperman writes his story first and then prepares his heading.

Should Be Brief.

A headline may be imperative, funny or startling. Only one quality is absolutely necessary. It must be brief. The reader is more likely to focus his attention on a few words than on a long sentence. One of the best headlines the writer has seen in a long time was the midsummer admonition of an Eastern Canadian hardwareman, addressed to the public during a particularly warm spell—"Get a tent." Brief, pointed, imperative, it struck home. Those three words had many times the potency of such a construction as "Do you need a tent in this warm weather?" or the tiresomely hackneyed, "We handle tents at all prices."

Three Classes.

Headlines can be roughly divided into three classes: Interrogative, imperative and demonstrative. The interrogative is the most commonly used but not by any means the most effective under all

circumstances. The interrogative headliner asks: "Do you need a gas range?" thus appealing to the class of people who have come to the conclusion previously that they do need a gas range. The imperative headline recognizes no restrictions but boldly flaunts the assertion addressed to all and sundry: "You need a gas range!" The demonstrative headliner seeks to convince one of the need for a range by citing a fact, such as "A gas range saves labor."

Different styles must be adopted to suit different cases. On the whole, however, the interrogative style lacks force and should not be employed to any great extent. The imperative style can become wearisome also. People cannot always be hectored into buying and a constant succession of dynamic imperatives will put them out of sympathy with the advertiser. For general use, the demonstrative form is found the most useful and the most readily adaptable.

Good and Otherwise.

Here are a few specimens of headlines culled at random from hardware advertisements in Canadian newspapers:—

"Don't sleep cold at nights when you can get a bed warmer for one dollar." Too long. It straggles all over the space. How would this do? "Bed warmers bring comfort."

"Hundreds of Hunters." Very bad. The rest of the sentence is finished off in small type, so that the words which strike the eye first convey no significance or meaning. "Prepare for hunting season," would have been more effective.

"Doesn't this hot weather make you wish you had a gas range?" Too long by far. "Cook in comfort," expresses the same thought much more concisely and with equal force.

"If you are thinking." An antiquated, stereotyped, inanely inexpressive heading. It tells nothing and is worse than mere blank space.

"Put the mail order stove on the scales." (This one accompanied by cut.) It makes a definite suggestion and is calculated to set the person who has caught mail-orderitis to thinking.

The D. Moore Co., Hamilton.

We are very much pleased with the arrangement of our ad. in your Spring Number, and think that your artist has excelled himself in the way he has displayed the ranges and also the type, etc. We think it is a very attractive ad.

We must compliment you on the very artistic manner in which you have put out this Spring Number, and think it will be the means of bringing some business.

By Mack.

I obtained a new point of view regarding the attitude of a business man towards his business recently.

To many, the Utopian period of business life begins when the generosity of Fortune provides the opportunity of withdrawing from the active direction of affairs that are usually interlaced with responsibility.

Now the impression seems to be accepted generally that the retail merchant or the manufacturer, it may be, works his best to develop a lucrative trade and at the same time maintains an aspect of repressed hostility to his environment.

There are many instances of this condition known to all of us should it be acknowledged frankly.

But this is not the way of our pattern merchant whose philosophy I shall describe for the benefit of those who chafe under the daily round.

He has trained his mind to extract entertainment from his work in the office every day.

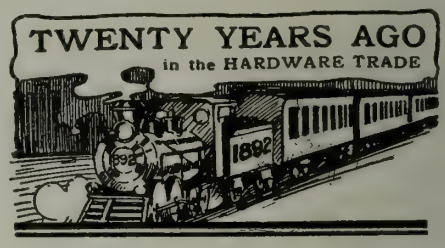
By excluding from his mental vision pictures of future pleasure and benefits, to-day's task yields to him satisfaction.

Probably the number of men capable of carrying on a business from year to year buoyed by such an atmosphere of hope is as yet too small to be called a class.

If it were larger could anyone doubt the good effect such treatment would show on the average store and, of course, upon the dealer himself.

This gentleman apparently does not believe that it is necessary to seek recreation by interrupting the tenor of events by long vacations.

He is in constant mental training and fresh to cope with any ordinary difficulty or situation as it appears.



And this by the relaxation of mind induced from putting himself in a receptive mood and expecting pleasure and interest from his work.

The optimistic outlook thus caused is reflected in the successful results obtained in financial increase and physical efficiency.

THE JAP-A-LAC 1912 CONTEST.

Following their regular custom for years, The Glidden Varnish Company are offering valuable prizes for the best Jap-A-Lac window display made in 1912. This year the first prize is a solid gold repeating watch, valued at $75.00. The second prize is a twenty-year gold filled repeating watch, valued at $50.00. The third prize is a 17-jewel 14k. gold Locust watch. They will also award thirty prizes of watches to all contestants who send them photographs of their Jap-A-Lac window displays, which displays may be of superior excellence, yet not worthy of either first, second or third prize.

The material for making the Jap-A-Lac window display consists of a center piece showing a Japanese pagoda in the center of which is a large Jap-A-Lac can, and around the base of which are shown Japanese figures dancing the famous Flower Dance of Japan. It is the work of the well-known artist, W. W. Denslow. This center piece is reinforced by a window trim in which wistaria is used in connection with Japanese screens.

The following items were taken from the issue of April 23, 1892:

"Another new hardware store has opened on Upper Water street, Halifax, the proprietor being M. O. Crowell, who has had an extensive experience in the business."

* * *

"A representative of Hardware the other day had the pleasure of a ramble through the spacious premises in which Bond & Co., Guelph, carry on business as hardware merchants."

Editor's Note.—The Bond Hardware Co. are in the same premises still but they recently acquired the store next door and have practically doubled the capacity of their store.

* * *

"The Toronto Roofing Co. have dissolved, W. G. McMurchy & Co. continuing."

* * *

"Fire was caused by combustion in the cellar of McMahon Bros.' hardware store, Kingston, early on Wednesday morning. Loss $1,000; covered by insurance."

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 1, plate 17, shows the method of developing a cone.

First draw the plan Fig. 1, having the diameter of the circle to correspond to the diameter of the base of the desired cone.

Step the plan off into equal spaces and number each.

Draw the elevation Fig. 2 which represents the height and gives the slant or pitch of the cone as A, B, C.

With the point of the compass set at A, and the lead at B, and with any convenient point as centre, as S, describe the arc N, M, Fig. 3 and lay off on this the stretchout of Fig. 1; draw lines from the points 1, into the centre, as shown by the lines N, S, and M, S, and the pattern is developed.

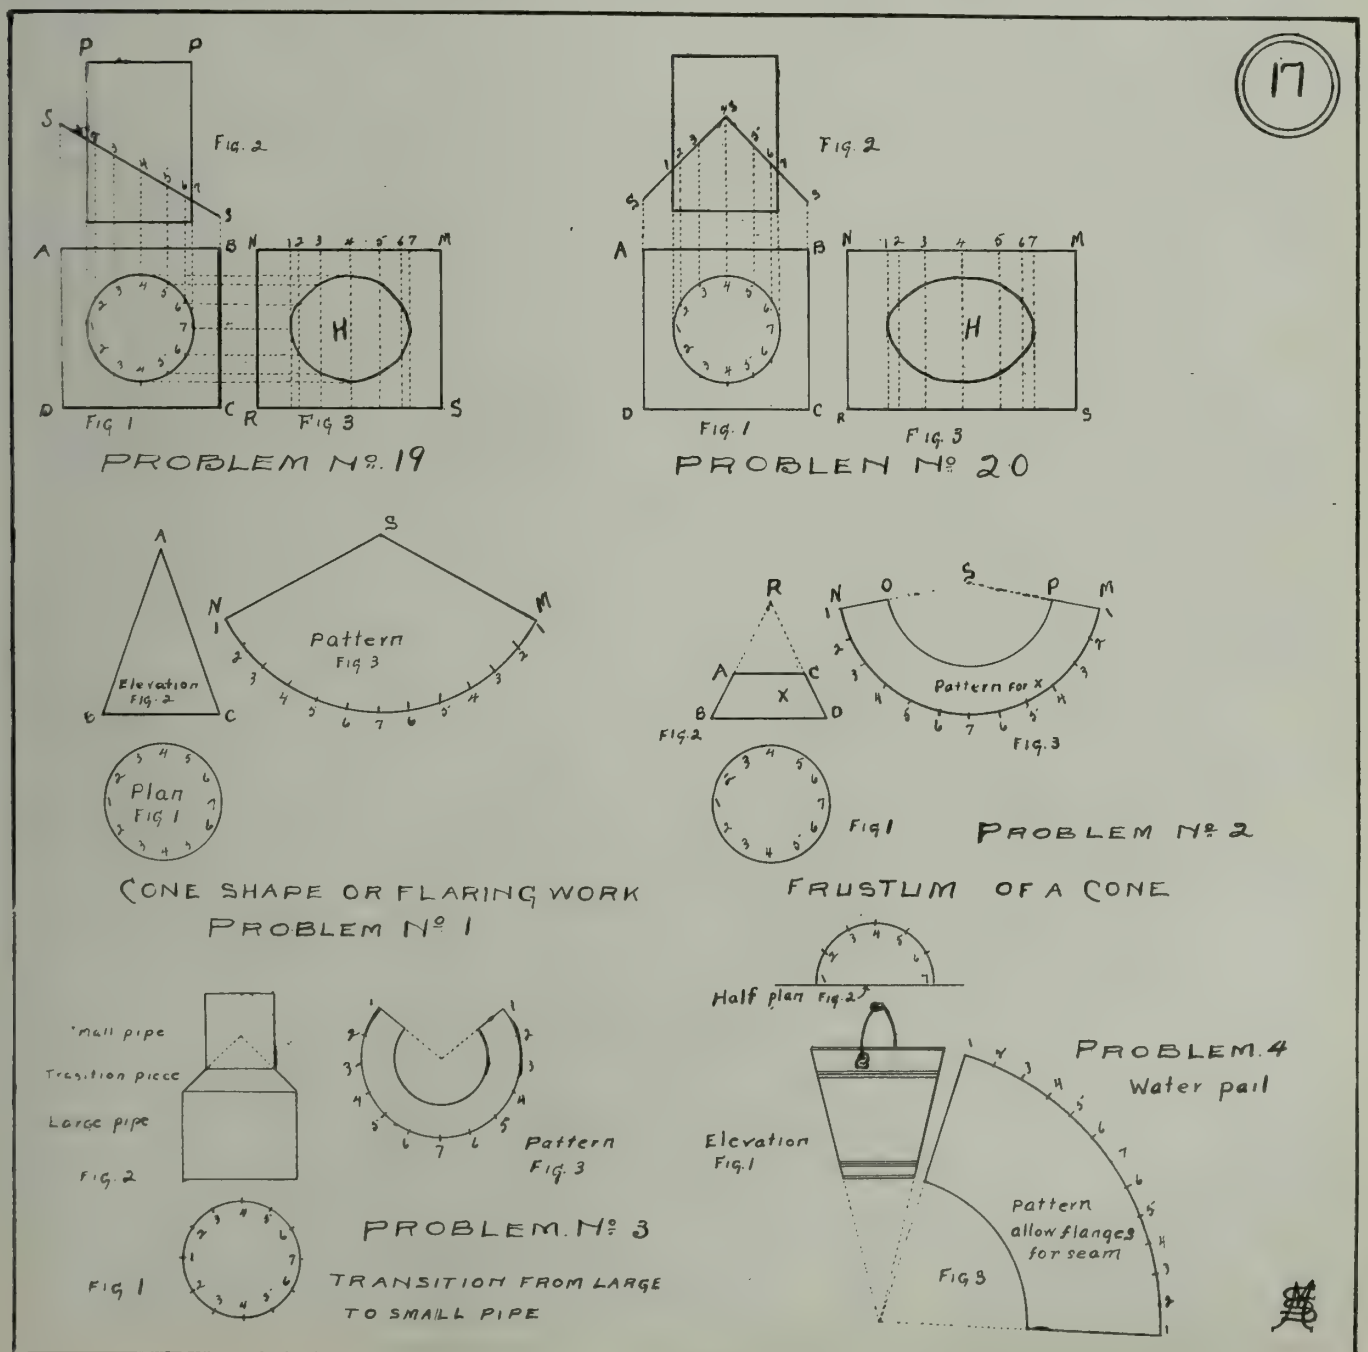
Prob. 2 shows the method of developing the frustrum of a cone with its top cut off parallel to its base.

Draw the plan Fig. 1 and step it off into equal spaces.

Then draw a complete cone as shown by the elevation R, B, D, Fig. 2.

Then draw the line A, C, showing where the cone is to be cut off at.

Set the point of the compass at R, and the lead at D, and with any convenient point as S, describe the arc N, M, and lay off the stretchout of Fig. 1.



Draw lines from the points 1 into the point S.

Then set the point of the compass at R, Fig. 1 and the lead at C, and, with S, as a centre, describe the arc O, P, cutting the lines N, S, and M, S, thus completing the pattern.

Prob. 3 represents a frustrum of a cone used as a transition piece to connect a large and a small pipe running in the same direction.

The method of developing is the same as Prob. 2.

Prob. 4 shows the pattern developed for a bucket or pail. This is a frustum of a cone inverted or turned upside down, and is developed the same as explained for Prob. 2.

Progressive Hardware Retailing

A New Way of Showing Knives—Featuring Tools for the Farm—A Forcible Talk on Paint—B. C. Dealer is Holding a Big Cash Sale—Pushing Housecleaning Goods.

NEW WAY OF SHOWING KNIVES.

Picton, Ontario.—Carter Bros. have a new and highly effective method of displaying knives. A glass showcase is used for these goods and the knives, instead of being left in the cases are taken out and laid flat on shelves. Customers have thus a complete assortment to glance over and can make a selection with greater facility. Behind the showcase are small trays or drawers in each of which one variety of knife is stored. When a customer desires to inspect or buy a certain knife, the salesman opens the corresponding drawer and takes one out. Thus there is never any necessity to remove goods from the showcase and the assortment is always complete.

TOOLS FOR THE FARM.

Rosetown, Sask.—Under the caption "Tools for the Farm," L. F. Heartwell & Co., are running a half-page ad. devoted to the sale of speed drills, hoof parers, vises, portable forges and similar articles. The advertisement contains the following pertinent statement:

"The outlook for a bumper crop was never better than at the present time. If you want your share of the crop you must be prepared to do your work at the proper time.

"All who have lived in the West for two or more years know the importance of getting the crops in, and off, in season.

"Those who were the most successful last year, were those who had their machinery repaired and ready to go to work when the time came for them to do so. If you keep your machinery, harness and horses in shape you are prepared for your work at the proper time.

"If you have your own tools you can get your repairing done before the seeding and spring work begins. You will also save time and money as it takes both to go to town for a small repair."

FORCIBLE PAINT TALK.

St. John, N. B.—"Spring is the great housecleaning season. It's the time when everybody feels it is absolutely necessary to make things brighter with the liberal use of paint. Paint is a necessity, not a luxury. Good paint is fully important as insurance. Paint to the house is as clothing to the body." These are just a few quotations from "McAvity's Messenger," the spring issue of which made its appearance this week, from the offices of T. McAvity & Sons, the hardware dealers in King street. Short, pithy, directly to the point, these and other like sentences command instant attention and, featured well, caused the casual reader to give the remainder of the contents of the number more careful attention than might otherwise be the case.

The firm have started an active spring housecleaning campaign. Their issue of the "Messenger" attracted considerable attention in St. John, and it was gotten up for no other purpose, so that this must be decidedly gratifying. The issue was illustrated with cuts showing the advantages of certain lines of goods, and there was just enough reading matter to get the reader interested and to cause him to make a visit to the store to inspect the features advertised. Each line had the various prices affixed, and no article of use or value in the work of renovating the house and premises in springtime escaped the listing in the issue of the "Messenger," which should prove a distinct aid in the campaign to secure the trade. It was published in two pages of one of the local dailies.

BIG CASH SALES.

Enderby, B. C.—The Fulton Hardware Co. are conducting a cash sale of all lines of hardware. The fact that "$25,000 worth of goods will be placed at the mercy of the buying public" is being fully announced in full page advertisements in the local paper. The sale will close on May 11 and everything is being offered at a very considerable reduction. The stipulation is made, however, that all sales will be on a strictly cash basis.

HOUSECLEANING AD.

High River, Alta.—"Housecleaning time properly prepared for ceases to be the most dreaded time in the year," is the introductory sentence in an advertisement of the High River Hardware Co. Following a number of illustrations are given of articles suitable for use at housecleaning time, the list including carpet sweepers, wash boilers, clothes wringers, dustpans, washboards, mops, carpet beaters, scrubbing brushes and pails.

SECRET OF WESTERN FIRM'S SUCCESS.

(Continued from page 31.)

the same control over transactions in the furniture department. All sales are cash sales. If this can be successfully accomplished with respect to furniture, there is good reason to believe that the same can be done with respect to stoves, builders' hardware and so forth.

Members of the Firm.

The Macleod Hardware Co. are a progressive firm in other respects as well. As will be seen from the accompanying illustration, they have a good-sized store with modern fixtures. The stock is neatly and effectively arranged and credit is particularly due for the display of machine tools. A large stock is carried and the articles are effectively shown behind glass cases.

T. M. Paulson was formerly in business in Minneapolis. B. E. Spink was with the Alberta Pacific Elevator Co., serving in the capacity of auditor.

FREIGHT CHARGES.

The Editor of Hardware and Metal:

I have been following your articles on "How to arrive at the selling price" with great interest.

There is one question I would like to ask: Do you include freight charges in the overhead expenses?

Our expense of doing business averages 25 per cent., including the freight. Leaving the freight out, it would average about 22 or 23 per cent.

Would be glad to see your answer in the next issue.

Yours respectfully,

S. F. Y.

Freight charges are not included in overhead expenses, but are reckoned on the cost price of the goods. Briefly, the cost price of goods is determined on the following basis: The invoice price, less the trade discount (but not less any cash discount), plus the freight or express and cartage, but not plus demurrage charges or breakage losses. If your overhead expenses run as high as 23 per cent., you had better start to investigate to find the reason. That percentage is too high.—Editor.

Current News of Hardware Trade

In New Office.

Montreal.—B. & S. H. Thompson have moved from their old office on St. Paul Street, and are now located in the new Transportation Building, suite no. 507.

Annual Reunion.

Kingston Old Boys, who are largely represented in the hardware trade throughout Canada, will be interested in the announcement that the Annual Re-union of the "Old Limestone City" will be held on June 3.

Moving Head Office.

Ottawa, Ont.—The Westport Plating and Manufacturing Co. are moving their head office from here to Westport. The move is being effected in order to have the head office and factory together.

W. G. Colville Burned Out.

Fort William, Ontario.—Fire broke out in the hardware store of W. G. Colville on Tuesday morning. Owing to the fact that the city mains were turned off for repairs, the hardware store and two others were consumed. The total loss is estimated at $132,000, about two-thirds covered by insurance.

Opening Showrooms.

Montreal. — The Sherwin-Williams Company of America are this week opening in New York large showrooms. In these there are to be model rooms equipped, showing the public the effects which can be secured from a wise use of interior paints. The showroom is to be in charge of a Canadian.

George Chaffee Goes West.

Montreal.—George Chaffee, until recently connected with Lewis Bros., left last week for Chicago and St. Paul en route for Winnipeg, where he has accepted a position with Wood, Vallance. Mr. Chaffee will move to Calgary upon the completion of the Wood, Vallance warehouse in that city.

Watched the Markets.

Montreal.—What happens when a man neglects to follow the markets closely was well illustrated here one day this week. One metal man found that another was selling tin a cent and a quarter below the market. The man who knew the rapid advance the metal had taken bought all he could from the other man, making quite a nice little sum in this way.

Scale is Fixed.

Toronto, Ont. — The International Sheet Metal Workers' Union of Toronto has come to an agreement for the forthcoming year with the employers. About 300 men are affected. The terms are as follows: Minimum rate, 35 cents an hour, and every man geting more than 35 cents an hour 2 cents an hour increase. The present rates run from 33 to 45 cents an hour.

Hours—8 hours a day, except in June, July, August and September, when firms desirous of so doing will work 9 hours a day. 5½ days a week's work.

Dalton & Sons' Store Burned.

Kingston, April 24th.—Dalton & Sons, Princess Street, one of the oldest hardware firms in the city, suffered a severe loss by fire Tuesday afternoon. It was one of the worst fires the city has experienced in some years. The loss is estimated at from ten to fifteen thousand dollars. The entire stock was valued at about $50,000. This was covered by $39,000 insurance. The fire started in the cellar, where the oils are stored, and the store itself was gutted. The stock in the warehouse at the back was almost untouched. The tipping over of a coal oil lamp which was in the hands of one of the boys employed in the store, is said to have been the cause of the fire. The lad was so frightened at what occurred that he cleared out and gave the others in the store no warning at all of it.

Thus, the fire was given a good start before the firemen were summoned. Mr. Dalton was in the office and his attention was drawn by his lady stenographer, who noticed smoke coming up through the office floor. At first Mr. Dalton thought it was only a match which had ignited, but when he made an investigation, was shocked to find that a terrible fire was raging among the barrels of oil in the basement.

The books of the firm were safely removed. The firemen, under Chief Armstrong, rendered good work. Seven minutes after the fire was discovered, the firefighters had several streams playing on the flames. While the fire was at its height, one of the clerks in the store, Henry Bedford, showed great bravery when he entered the building and rescued the cash register.

Business Changes.

Coquitlam.—The firm of Watson & McKeown have opened their new hardware store near Dewdney Trunk Road.

Goodlands, Alta.—Geo. R. McLean is opening a new hardware store here.

Oxbow, Sask.—Crossby & Johnston have bought the hardware business of George S. Hames.

Khedive, Sask.—Martin Fladagar is withdrawing from the hardware firm of Martin Fladager & Co. His half interest has been acquired by J. L. Farnum.

Cadogan, Alta.—Paulson Bros., hardware dealers of Bawlf, have opened a branch store here.

Melbourne, Ont.—R. C. Thomson has sold out his hardware business here to Alexander McDougall, and has gone West, locating at Outlook, Sask.

Galt, Ont.—The Brewster Hardware Co. have disposed of their stock to W. F. Hall, of Berlin, who has taken possession. Mr. Hall was with Geo. Potter, of Berlin, for some time.

Personal Notes.

Montreal.—F. M. Tobin, of the Tobin Arms Manufacturing Company, Woodstock, spent several days in Montreal last week.

The fine weather is bringing the Quebec retailers to Montreal. Among those in the city this week were: A. Lesage, St. Therese; C. Leblanc, Joliette; H. Desjardin, Terrebonne; J. P. Poissant, St. Edward; A. Largace, Cartierville; L. J. Mage, St. Antoine; R. Chasse, Tetreauville; P. E. Caron, Chambly; P. Laberge, Chateauguay.

New Companies.

Among the new companies recently incorporated are the following:

S. Weisglass, Ltd., to manufacture hardware lines, head office Montreal, capital stock $100,000.

Wire Goods, Ltd., head office Howick, Quebec, capital stock $50,000.

profitable.

CULTIVATION OF FLAX.

Ottawa, April 14.—The Federal incorporation of the Canada Flax Fibre Company, Limited, of Toronto, with a capital stock of three million dollars, as announced in yesterday's Canada Gazette, presages the inauguration of a great new industry of special importance to the prairie provinces. The incorporators are nominally law clerks and stenographers in a Toronto law office, but it is understood the men behind the enterprise are Toronto and English capitalists. The manufacture of cloth and paper from flax fibre on an extensive scale in the prairie provinces, where flax is grown extensively, and where hundreds of thousands of tons of flax straw are now thrown away each year, has been rendered feasible by a new process of handling flax fibre. The incorporation of the new company marks the first step towards the exploitation of what promises to be a most important manufacturing industry in the West.

Weekly Market Report --- Metals

TIN GOES UP.

The whole trend in metals is toward higher prices. Sharp advances were made during the week in tin and the price has now reached almost a record level. It is noteworthy that the scarcity in a number of lines is still felt. There has been, in fact, scarcely any improvement, despite the fact that buyers are showing a tendency to order some metals for immediate requirements only.

MONTREAL.

Montreal, April 25.—Tin has taken one of its upward turns, advancing £3 upon the primary market, and having of necessity been raised here. Indeed, it is a high market all around this week. Copper, rather unexpectedly, has declined, although not sufficiently to affect the price asked by the Canadian handlers. Whether the decline will continue, or whether the price will soar once more is a question. The copper market, at the present time is none too certain.

All metals are scarce. Lead is exceedingly difficult to obtain. So is tin. There is next to no spelter on hand. Antimony is wanted badly, also iron. But relief is in sight. Word has been received of shipments on early boats, and it would appear that the first week in May will see a more healthy condition of the market.

Large Orders Placed.

But even the better supply which is expected will hardly cause any drop in price. Orders have already been placed for more metal than will reach Canada by the early boats.

Tin.—The remarkably rapid advance which came on Monday does not seem to have been the result of any manipulation by the syndicate, but rather to have been the natural outcome of heavy ordering. The supply of tin which could be sold in place of Straits—upon the proper scale—was not great. The call, therefore, was upon the Straits, and there was not enough on hand to meet the demand.

Locally ordering of tin has been heavy. It is a strange thing, but as this metal advances the demand for it seems to increase. Dealers fear that there will be a still further rise, and as present events show, with some cause.

Up a Cent a Pound.

It has been found necessary to advance tin on the local market a cent a pound, the Lamb and Flag Straits now being quoted at $49.50.

Copper.—Stocks appear to be somewhat easier. The demand continues large but the metal is on hand to enable the filling of orders. The easing off has not been sufficient to cause a drop in the prices locally, for the advance which was made last week was a small one in view of the rapid jumps which the metal had been taking.

Whether a future advance will take the metal up to 17 cents in large lots, as has been predicted, remains to be seen.

Antimony.—There is little new to report. The metal is still wanted by manufacturers, and is still a little hard to obtain. Supplies are low.

Spelter.—This metal also is scarce. Shipments are expected to arrive, and their coming may result in a small drop in prices, but this is far from certain.

Advances in Lead.

Lead.—So scarce has this metal become that it has been necessary for the handlers to make another small advance. They are being forced to pay more for the metal and must charge a little more for it.

Domestic Trail has been advanced 10 cents a cwt. to $4.95. Imported pig has risen similarly; while bar pig has jumped to $5.20 a cwt., a rise of 25 cents.

Only a speedy arrival of more supplies can keep lead from advancing still further. A shipment is expected on the first boats, however, so the scarcity may be relieved.

Iron.—Stocks are getting lower and lower, for there is a good deal of ordering, and the handlers, though chary, are selling some of the metal. Shipments are known to be coming, but they will probably be all sold before they land; and as there is but little likelihood of enough metal coming to meet the need, lower prices do not seem imminent. A change in the other direction is more likely.

TORONTO.

Toronto, April 26.—The situation in metals is eminently satisfactory from one standpoint and rather alarming from another. The satisfactory side of the question is the fact that consumption is very heavy. There is a big demand all along the line and there is every reason to believe that this active condition will be maintained right through the year.

The unsatisfactory features are found in the extreme scarcity of some metals, tending to higher prices in most lines. There is no relief in sight in some lines, particularly as the demand continues so consistently heavy.

Tin Goes Up.

Tin.—The past week has seen a rather remarkable advance in tin; remarkable even for tin. The local price has followed the sharp advances recorded on the primary markets, and quotations to-day range anywhere from 48 to 50 cents, with the higher figures most common.

Even at this price there have been large sales. Buyers seem inured to high prices in tin and no developments at London have the power seemingly to check the demand to any appreciable extent.

The firmness shown at London seems to point to a conviction that the intrinsic position is one of great strength. Stocks are said to be light on the primary markets, which will tend to keep prices up.

Great Firmness in Lead.

Lead.—There have been no developments in the lead situation. The demand continues heavy and the metal locally is rather scarce. It follows as a natural sequence that the price has remained firm. Although no direct indications of a pending advance have been given, it is apparent that the market is tending in that direction.

Antimony.—Little interest is being shown in antimony. Small sales are the order of the day.

Copper. — The tendency in copper seems to be to buy from hand-to-mouth. The price has advanced to such a comparatively high figure that some buyers are a little shy about purchasing in bulk and are content to satisfy immediate requirements only. Small orders predominate and yet the volume of business is large enough to give an active tone to the market.

The future of copper is a little uncertain, but confidence is felt, a condition brought about by the heavy consumption all around.

Spelter. — "Scarce" is hardly the word to use in connection with spelter. There is none in sight locally and no business is being done. Enquiries indicate that the metal is in demand, but there will be none to satisfy the demand before the first of the month.

Iron is Firm.

Pig Iron.—There is a firm tendency noted in pig iron and higher quotations would not cause any surprise.

G. L. Griffith & Son.

The spring number arrived all right and it's a dandy. Our ad. shows up well and we should get some business from this. Just got a rush order from Montreal, so they must be getting help from the ad.

Weekly Market Report --- Hardware

PRICE INCREASES.

The hardware market has been featured by "advances and rumors of advances." Several lines have gone up in price, as noted below, and there is much talk of future increases as a result of the higher cost of raw material Some interesting developments are promised in the not distant future.

MONTREAL.

Montreal, April 25.—Business seems to be growing brisker every day. The Titanic diaster of last week had some harmful influence in the cities, but the orders from the country were not checked, and now attention is generally undistracted from the daily activities.

Some price changes have been noted. all of these relating to shovels and scoops, the new price rate having been struck at a meeting of the Shovel Association held in Montreal last week. The revision, naturally, is in an upward direction. With metals scarce as they are at present, the move could hardly be otherwise, unless some competition made a drop necessary.

Tools in Big Demand.

Spring goods are moving especially well, though tools, not necessarily connected with this season, are in good demand.

It would appear that this is a time when the hardware dealer would do exceedingly well to study the market conditions carefully; and then make an examination of his stock. Certain lines seem likely to advance, and if the stock of these on hand is small it would be advisable to order a fair supply at once. Because of the high, and rising price of brass, builders' hardware may well be advanced. Valves and solder irons will hardly remain at their present figure for long. Copper rivets and brass screws may advance, too. True brass screws have been dropped recently, but it was American competition which brought about this movement. Let there be a bettering of conditions across the line and screws will advance here.

Demand for Spring Lines.

Spring Goods.—For all class of spring goods the orders are piling in. Lawn mowers are in demand—and lawn mowers of a high grade, too. There is a call for clippers, for sprinklers, for hose and hose reels. The dealers are preparing for a heavy business in these lines.

Builders' Hardware.—Here there has been an increase in the heavy business which has been noted for some time. From the cities the larger orders are being received, but the smaller places of the far West are making their demands. Later it may be that dealers will buy in order to insure a good stock against a probable advance in price. Now, however, the ordering seems to be the result merely of a large demand felt and anticipated.

New Discounts Struck.

Shovels, as has been indicated, have been advanced. At present the discounts are as follows:—

Grade 1—60 and 2 1-2 per cent. off.
Grade 2—55 and 2 1-2 per cent. off.
Grade 4—45 and 5 per cent. off.

In scoops the change in discounts has been as follows:—

Grades 1, 2 and 3—50 and 5 per cent. off.

Grade 4—50 per cent. off.

Kitchen Ware.—The demand for this line of goods seems likely to remain large for some little time. Dealers are laying in good stocks, but supplementary orders show that they are retailing the ware with satisfactory rapidity. The moving season is undoubtedly responsible for a good deal of the purchasing.

Weather Helping Sporting Goods.

Sporting Goods.—Warm weather is beginning to suggest the laying off of overcoats, and when it does this it also suggests the purchasing of goods needed for Spring and Summer sports. Baseball and tennis goods are beginning to sell well. Fishing tackle is moving, and bicycles are showing once more that they can come back. The sales are growing, dealers say. The demand this season has been much better than it was in the early spring months of 1911.

TORONTO.

Toronto, April 26.—Spring trade is now at its height. With weather conditions favorable and the surety of a continuance of like conditions, the hardware dealers are finding that the spring demand is heavy. There is, in consequence, an insistent call on the wholesalers for supplies. Local jobbers report that they are pretty well rushed; in fact, that business is just as heavy as they can conveniently handle. Whatever has been lost up to the present through unfavorable weather conditions is now being made up in real earnest.

A number of price changes have been made during the week. The tendency in prices is upward, due to the rapidly increasing cost of metals in many cases. It is highly probable that advances will be made in other lines before long. Those who are closely in touch with conditions assert that there will be advances as a result of the cost of copper and brass; as this would affect many lines of builders' hardware, the prediction is one of deep significance and should be given close consideration. The present seems, on all counts, to be a good time for the retailer to do his buying.

A Heavy Demand.

Seasonable Lines.—Spring goods are in heavy demand all around. Rakes, spades, hose, lawn mowers, sprinklers, wire netting and all other goods of a like nature are being shipped out in big bulk. Already there are plenty of sorting orders being received, showing that the demand on the retailer has been heavy.

Spades have been advanced. The new schedule is noted in the Montreal hardware report.

Shipments Are Heavy.

Household Goods.—Shipments of all varieties of household goods are heavy. Refrigerators are in particularly heavy demand. One jobber reports an individual order for 45 this week from an outside point. There is a correspondingly good demand for all kitchen sundries—enamelware, tinware, etc.

The vacuum cleaner trade is reported to be heavier by a wide margin than in any previous year. This is an article which is rapidly coming into favor.

Builders' Hardware.—The demand is undoubtedly heavy and it is growing all the time. "Selling more than ever before at this time of year," is the terse commentary of the sales manager of a local jobbing house.

It is predicted that some lines will be advanced shortly, in view of the high cost of raw material. Undoubtedly the material entering into the manufacture of builders' hardware is costing more and, in some cases, it is hard to obtain. Whether this will affect prices remains to be seen.

Upward Revision.

Heavy Hardware.—An advance in the price of lead pipe to 7 1-2 cents is reported. The discount remains the same. The discounts on screws have been revised in accordance with the upward trend in price. The new discounts have already been announced. There is a good demand for all lines of heavy hardware at present moment.

Sporting Goods.—The good weather has brought along a rapid-fire demand for all lines of sporting goods. Anglers' supplies are being sold now, although the fishing season cannot be said to have opened. Baseball goods are very much in demand. Every corner lot is being utilized by some amateur nine and the stores are experiencing a steady call for balls, bats and gloves. This means an equally heavy demand on the jobbers. All other varieties of sporting goods are selling correspondingly well.

Stoves, Furnaces and Accessories

What About the Second Hand Gas Range?

These are Harder to Dispose of Profitably Than Are Coal Cookers—The Three-Dollars-Down-and-a-Dollar-a-Month Business Has Decreased the Call for Old Models, Even in the Large Cities—Two Means of Disposal Which Have Been Tried With Good Success.

What is to become of the second-hand gas stoves?

At this season, when many are moving, and when gas stoves have to be moved with the rest of the furniture, this question is a particularly live one. Many there are who would be glad if they did not feel it necessary to move that gas stove. If they could simply go to a dealer, arrange with him to allow so much for the old stove, and give him the balance in cash. Then the dealer would remove the old model and would put the new one in the house to which the move was made.

Field Seems Limited.

But what is the dealer to do with the stove which he takes in part payment? There are a number of ways in which coal ranges secured in this way, may be disposed of, but a different state of affairs exists with gas ranges. Coal and wood cookers, of the second-hand variety, can be repaired and sold to the poorer classes in the community. They can also be sold to the well-to-do for use in summer kitchens. A second-hand stove is a mighty useful thing to have, according to the experience of many dealers; but a second-hand gas stove is not so valuable. It cannot be sold to the poorer classes, for the poorer classes in a great many cases do not have gas in their homes. There is no equipping summer kitchens with gas stoves. There is no gas there either. In the smaller places only the moderately well-to-do have gas stoves. They want new models, when they buy, so there is no solution here for the problem of how best to dispose of gas ranges which have already been used to a greater or less extent.

How Business Has Been Spoiled.

It would seem the demand for these is largely confined to the large cities. There gas is found in many of the poorer homes. There live a good number who are glad enough to get a good model which is yet not costly. That it has been used a little, that it does not look new, does not particularly matter to them.

Yet even the business among this class has been somewhat spoiled by the three-dollars-down-and-a-dollar-a-month concerns. When a man can get a new stove put in his kitchen on payment of $3, he does not look with a great deal of favor upon a stove which has been used, and for which he is asked to pay a sum varying from $8 to $15 or $18. That in addition to the three dollars initial cost, he will be called upon to pay $20 or $30 in one-dollar monthly instalments is lightly regarded. A dollar at a time he thinks he will not miss. He feels confident that he will not miss it as much as he would miss that extra six or more dollars at the start. Perhaps it is by looking at things in this way that people are kept poor; nevertheless this is the way many people do view a stove purchase.

Advertising Wisely.

Yet second-hand gas ranges may be disposed of fairly profitably—providing, of course, the right means are taken. M. H. Boucher, of St. Lawrence Boulevard, Montreal, has adopted the wise plan of letting people know that he has second-hand stoves to dispose of. He does not take much space to convey this information. Where advertising space is expensive, it is doubtful if the returns would justify the expenditure. But at the bottom of his advertisment, telling of his other stoves, Mr. Boucher adds a line mentioning the old models which he is prepared to dispose of "at greatly reduced prices."

This scheme is bringing results. It catches the attention of the few who do pause to consider. It attracts all who would rather pay down six or ten dollars at once than eighteen or twenty-five dollars within a year. An ad. such as this attracts the wise bargain hunters, and the necessary sales are made.

An Opposite Method.

How second-hand gas ranges can be disposed of in a place much smaller than Montreal is somewhat of a question. One man explains the plan he adopts. It is quite the reverse of that adopted by Mr. Boucher in Montreal. Whereas Mr. Boucher sought to draw attention to the second-hand stoves he had for sale, this man sought rather to keep the knowledge of his old models to himself.

A strange course of procedure this may seem, yet one which was not adopted without some thought. The dealer explains his course this way. "You see," he says, "there are a number of people here who would like to have a gas stove in their kitchen, but who feel they cannot afford to spend any considerable sum for one. They have a good coal range, and the addition of a gas stove seems somewhat in the nature of an unnecessary expense. I get to know the people who deal with me, and when I find one who would rather like a gas range, but who does not feel justified in paying any great sum for one, I remark casually that I have some patterns which have been slightly used, and which I am selling off at a low figure. Often the customer becomes interested, and a sale is made."

No Harm to Other Business.

The dealer adds that he does not in this way interefere with his sale of new models. He never speaks about the old ranges until he feels quite sure that it would be useless to attempt to sell a new stove.

It is to give him a chance to determine who will and who will not buy the new and more expensive models that this dealer keeps his supply of second-hand stoves somewhat of a mystery. But he has another reason. As he says: "The place in which I do business is not of great size. The people buying gas stoves are of the better class. They would not like people to know they were buying a second-hand gas range. They wouldn't like to think they were buying one themselves. As a matter of fact, I never use the term 'second-hand' at all. I say stoves 'which have been slightly use'—stoves which I have taken back because people were moving, or because they want a larger oven. I never let one of these 'stoves which have been slightly used' go out until it is in perfect condition, and so the buyers are quite satisfied. I find that I am not losing any favor because of handling this line. Rather people seem to be pleased that I can give them what they want at a price which they feel they are justified in paying."

Weekly Market Report---Stoves

A BIG DEMAND.

Trade is said to be so much brisker that conditions resemble what is usually experienced in early fall. The feature of the market is the big demand for gas stoves. The manufacturers are experiencing some little difficulty in meeting the demand. It is also noteworthy that the demand for gasoline stoves is increasing.

MONTREAL.

Montreal, April 25.—Because they are so busy getting out the goods which are on order, manufacturers have little to say about business. It is good, that is about all there is to be said. Orders are coming in better than they have for some time. The month of April to date is much ahead of April, 1911, and the probabilities are that the increased amount of business done will be rendered larger before the coming of May.

The general advance in tinware, announced last week, has not had any deterrent effect on orders. Rather the demand for kitchen ware has increased.

Business in stoves is entirely satisfactory. All lines are being largely ordered—that is excepting heaters, which are not much wanted at this season. Furnaces, too, are moving in a satisfactory manner.

Collections Reported Good.

Not only is business good, but it is reported that the manufacturers are getting their money rapidly. The retailers, the country through, seem to be in a good position financially.

Spring Goods.—As has been said the higher price level has not stopped the call for tinware in the least. All kitchen articles, indeed, are being largely ordered. This is this line. The retailers continue to show the ware prominently, and those passing by are evidently seeing the wisdom of buying. The number of new homes being opened, and the number of people who are moving, undoubtedly has a good deal to do with this demand.

Gas Stoves.—Here a rush is being experienced. Orders are being placed with the retailers in large numbers, and, of course, every one wants the stove delivered promptly. None think they can wait. So, the manufacturers are being called upon to make hurried shipments, and the retailers are giving their customers the quickest service possible.

Orders Placed Early.

Many, it will be remembered, have been taking steps to rouse people to the necessity of placing their stove orders early, and so avoiding the rush. The rush, as far as the dealers have been concerned, has not been avoided; but they did get a good deal of early business, which after all, is what was most wanted. They are quite content that there should be a rush now.

Coal oil and gasoline stoves are in demand, too. These are wanted for homes in the city and in the country places. Some say the demand for these lines is much greater than it was last year. Generally an improvement in the business is noted, and it must be remembered that it is only April yet.

Good Call for Ranges.

Ranges, Heaters and Furnaces.—Spring is not as brisk a season for ranges as is the fall, yet at this very time there is a big demand for these cookers. Those taking up house-keeping are buying their ranges, and many are being purchased by those who are relegating their old range to the summer kitchen.

TORONTO.

Toronto, April 26.—The activity noted in the stove market is unusual for this time of year. All lines are selling briskly. "Our trade," commented a manufacturer to-day, "is just about as heavy as we usually get it in the early fall; much larger than we expect at this time of year." Reports indicate that a pretty satisfactory increase has been made over last year.

The transportation situation has improved, but considerable difficulty is still being experienced. The railways are unable to make shipments rapidly and some complaints are being received from customers on that score.

Gas Ranges.—The largest demand, of course, is being experienced in gas stoves. There is a heavy call and the manufacturers state that they are meeting with considerable difficulty in meeting the demand. Shipments are heavy and every mail brings in its share of "rush" orders. The same applies to gas plates, which are in heavy demand this year.

People "Coming Around."

Oil and gasoline stoves are selling well. With respect to gasoline stoves, people are slowly "coming around" and losing the belief that they are dangerous to operate. There is, as a result, a steadily growing demand.

A Steady Trade.

Ranges.—Although taking a second place in sales just at present, coal ranges are still pretty active. The demand, though not unduly heavy, is steady and is showing signs of rapid improvement. Several good sized orders were placed this week.

Coal Heaters.—The demand is not large, but a few orders are coming along. Considerable booking is being done and everything points to an active fall trade.

Furnaces in Demand.

Furnaces. — The warm weather has created active resumption of building operations and there is, as a result, a better tone to the furnace industry. Furnacemen are now pretty busy and the manufacturers are finding the demand brisk.

CLEARING SALE.

Vancouver, B.C.—C. B. Kernan, 148 Hastings street east, is selling out his hardware stock. In order to dispose of the goods before his lease expires, he is conducting a clearing sale and is advertising extensively.

He has been using a four-column space twenty inches deep for his advertising matter. Prices have been made the outstanding feature. The advertisement has a two-inch margin on each side, the margin space being divided into a couple of dozen sections. Each section contains the name of one article and the price, the figures being set in 36 pt. type so that the prices stand out boldly from the rest of the advertisement and compel attention.

THE GARDENER'S REWARD.

Apropos of amateur gardening, the following poem is well worth reproduction:—

It was the busy hour of four,
When from a city hardware store
Emerged a gentleman who bore
    1 hoe,
    1 spade,
    1 wheelbarrow.
From thence our hero promptly went
Into a seed establishment,
And for these things his money spent:
    1 peck of bulbs,
    1 job lot of shrubs,
    1 quart of assorted seeds.
He has a garden under way,
And if he's fairly lucky, say,
He'll have about the first of May
    1 squash vine,
    1 egg plant,
    1 radish.

Weekly Western Market Report

Important Price Changes Are Pending in Many Hardware Lines—Trade Has Been Exceptionally Good as Result of the Favorable Weather Conditions.

Winnipeg, April 23.—A meeting is being held this week which will probably result in some important changes in hardware prices. What these will be cannot be stated at time of writing.

Trade has been exceptionally good, due to the favorable weather conditions. Western jobbing houses are being rushed to meet the demands.

Winnipeg Hardware Quotations.

Ax Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.95; p.g. oak, $2.90.

Augur Bits—"Irwin" bits, 47½; other lines 70 and 10 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3; small lots, 2½; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.25; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $15.

Blocks—Steel, 50 per cent.; wood, 60 per cent.

Cut Nails—$3.15 per keg base.

Wire nails, base, $2.80 Winnipeg; $2.35 Fort William.

Copper—Sheet and planished copper, 30c per lb. Tinned, 24c. Copper wire, 3-inch gage, 24c, to 20-inch gage, 29c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corrugated iron, 28 gauge, $3.87; 26 gauge, $4.18; pressed standing seamed roofing, 28, painted, $2.84; 26, $3.24.

Canada Plates—Firm. Half polish, 6 and 7-inch, $3.65; 8-inch, $3.90; full polish, 6 and 7-inch, $4.40; 8-inch, $4.65.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 5; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron—Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 6, $4.20; 28, $4.60; 30 gauge or 10¾ oz., $4.80; Queen's Head, 20, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Iron Pipe—⅜ in., $3.25; ½ in., $4.05; ¾ in., $5.00; 1 in., $7.20; 1¼ in., $9.80; 1½ in., $11.80; 2 in., $15.30.

Galvanized Ware.—37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.90; No. 2 and larger, $4.65; snowshoes, No. 0 to No. 1, $5.15; No. 2 and larger, $4.90; steel No. 0 to 1, $5.35; No. 2 and larger, $5.10; featherweight, $6.50.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $2.75; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50, 5 and 5 per cent.

Hinges—Light T and strap, 65 per cent.

Hooks—Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 40 per cent.; smaller lots, 35 per cent.

Iron Pipe, Black—⅛ in., $3.15; ¼ in., $2.30; ⅜ in., $2.35; ½ in., $3.15; ¾ in., $3.80; 1 in., $5.45; 1¼ in., $7.45; 1½ in., $8.95; 2 in., $11.55; 2½ in., $18.40; 3 in., $24.15; 3½ in., $32.25; 4 in., $36.75; 4½ in., $42.50; 5 in., $47.50; 6 in., $61.50; 7 in., $95.50; 8 in., $118.

Logging Chain—¼ in., $7.50; 5-16 in., $6; ⅜ in., $5.50.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead—$4.75. Lead Pipe—$5.75.

Lead Waste—$6.75.

Rivets and Burrs—Iron rivets, 55 per cent.; copper, No. 8, 30c; 10, 32c; 12, 34c; copper burrs, No. 8, 40c; 13, 43c; 12, 46; copper rivets and burrs, No. 8, 31c; 9, 32c; 10, 33c; coppered, No. 8, 17c; 9, 17½c; 10, 18c.

Rope — Sisal, 8¾; Pure Manilla, 10¾c; British Manilia, 9c; lath yard, 9¼c.

Staples.—Bright wire, $2.50 F.O.B. Fort William; $2.90, Winnipeg.

Steel Squares—40 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 6 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—Half and half, $28 per cwt.

Screws—Flat head, iron, 87½, brass, 77½; round head, iron, 82½; brass, 72½; coach, 67½ per cent.

Staples—Bright wire per cwt., $2.50 at Fort William, $2.90, Winnipeg.

Belleville Hardware & Lock Manufacturing Co.

We received to-day your Annual Spring Number of your paper, which we want to compliment you on. It certainly is a very creditable piece of work and we are well pleased with our ad. in same.

Catalogues and Booklets

A Handsome Calendar.

The Carborundum Co., Niagara Falls, have sent out a very handsome calendar, showing the Falls, with an Indian in a canoe striking out across the river. Of unusual size, it makes an attractive hanger for the office.

• • •

A Want Book.

Emerson & Fisher, St. John, N.B., have issued a "want book," which is arranged on an original plan. The pages on the left-hand side of the book are used for advertising matter and the right-hand pages are left blank except for ruled lines. The object of this is that the wants, suggested by the advertising matter on the left page, can be entered on the right page before they are forgotten or neglected.

• • •

Marble's Arms.

The 1912 catalogue of the Marble Arms and Mfg. Co., Gladstone, Mich., has been issued to the trade. It is a directory of the sixty outing specialities made by this firm. The catalogue is 9 by 11 inches and illustrates the full line. It includes full information and descriptions of sights, pocket screw drivers, rods and cleaners, auxiliary cartridges, anti-rust ropes, nitro-solvent oil, pocket axes, hunting knives, fish gaffs and nippers, compasses, etc. This catalogue contains a special section devoted to advertising and selling helps, particularly designed for the retailer.

• • •

Edge Tools.

The Allan Hills Edge Tool Co., Galt, Ont., have issued a handsome catalogue, showing their line of edge tools. It is printed on coated paper and the cuts, which are all half tone, show up extremely well. The cover is embossed and printed in three colors.

The lines shown include axes of all sizes and varieties, adzes, sleeks, chisels, carpenters' knives, coach and wagon makers' knives, shingle and beading knives, brick scrutch, brick hammers, brick chisels, cold chisels, peaveys, cant hooks, picks, matlock, crow bars, hammers, sledges, wedges and mauls.

Methods of Retailing Paints and Varnishes

Interior Paints Present a Fine Field

Few Realize the Ease with which This May Be Applied—Interior Paints Not Only Give Beautiful Effects, but They Render the House Sanitary; They Give a Finish that Is Durable—Hardwaremen Must Do Considerable Educational Work.

It is largely because of the educational work which has been done by both manufacturers and retailers that the paint business has grown so tremendously in the past decade. But it is exceedingly necessary that the dealers should not come to feel that there remains nothing more to be done. They should not even get the idea that the breaking ground has been accomplished, and that all they have now to do is to keep the ground fertile. There remains yet a great deal of missionary work. Hardly a dealer is there who has made his paint business as wide as it may possibly be made.

A New Field Opening.

Much has been said about house and barn paint, and much remains yet to be said; but there is another side to the painting trade—a side which has come to the front only during the past three or four years—a side about which there is a great deal of ignorance displayed.

Of interior paints the great mass of the outside public know very little. They are being educated, but the work has only commenced. Some people have predicted that the paint business has been going ahead so fast that it will play itself out. These interior paints show the foolishness of any such prediction. Why here is a branch of painting which has only been touched to date. It remains for the hardwaremen of the country to devolop it—to educate people up to the point where they will see what they can do to beautify their homes by the use of a little of this special preparation.

These interior paints have virtues of which many are as yet in ignorance. The lamentable part is that there are hardwaremen, men who are handling paint, who know little of this line. They can tell a customer that it is for interior work, but only the few are able to explain how easily it may be applied; only the few are able to show that while the initial cost is perhaps a little more than would be necessary to decorate the room with a cheap wall paper, the ultimate cost will yet be less. Only a few are able to point out the sanitary advantages.

Those who have come to realize the fine effects which can be secured by the use of wall paints, the tints, the delicate colors, the tones which harmonize with the furniture used, have nevertheless often been kept from having their houses decorated in this way because they believed the work would be expensive. And it must be admitted these people have had some reason for so supposing. It has been to the advantage of the decorators to keep people in ignorance of the ease with which many of these wall paints can be applied. By keeping the people in the dark, they have kept business for themselves.

Easily Applied.

Now that is all very well from the standpoint of the decorator, but for the people and for the hardwaremen who supplies the householder with what he wants, this ignorance is not satisfactory. Interior paints are not so hard to apply. True, there are some effects which the amateur could hardly secure, but the average tint he can easily get by following a few simple directions. The householder, moreover, who would wish to effect a saving by doing his own walls and ceiling, does not want the most expensive finish. He wants something dainty, something good but simple, and he can obtain what he desires himself. The borders at the top of the walls will not bother him. With the stencils which the hardwareman can supply, these can quite simply be obtained.

To what extent these interior paints will come to be used rests largely with the hardwareman. If he makes a study of the interior paints himself; if he talks of them to his customers; if he is willing to explain how they can be applied, even when a sale does not seem imminent, he will educate the people of his community to using this material.

Sanitary Features.

The hardwareman need not feel that he is advocating the use of the interior paint on its appearance alone. Many will decide to use this for the fine effects which it renders possible; but others may be lead to make purchases from other reasons. The beauty which the paints renders possible will appeal to them, but the other features which it offers will clinch the sale.

Paint for instance, is sanitary. In the United States, some little time ago, a test was made to find which was the most sanitary for interior decorations—paint or other mural coverings. The decision was strongly in favor of paint. Indeed, one would not have to refer to the United States investigation to get pretty good evidence of this. Think of your local hospital. How are the walls decorated? Paint. Perhaps it has not the fine appearance which can be given by the splendid interior paints now being manufactured, but paint is used in the hospitals for the reason that it is sanitary. In this age which has invented the phrase "Swat the fly," in this age when germs are having such a struggle to prevent being exterminated, the sanitary features of interior paints are well worthy of attention. They are worth explaining to prospective buyers. Won't the fact that using paint on her walls makes the house less likely to disease appeal to the mother of a family?

Some, when it was suggested that they should use interior paints, have decided against this, claiming it is too expensive a means of decoration. The dealer should be able to answer that argument. He need not attempt to prove that a decorator can be secured to do the painting for the price it would cost to paper. That would hardly be true. But the dealer may point out that the householder can do the painting himself. He can tell him how, and give him some of the information prepared by the manufacturing houses.

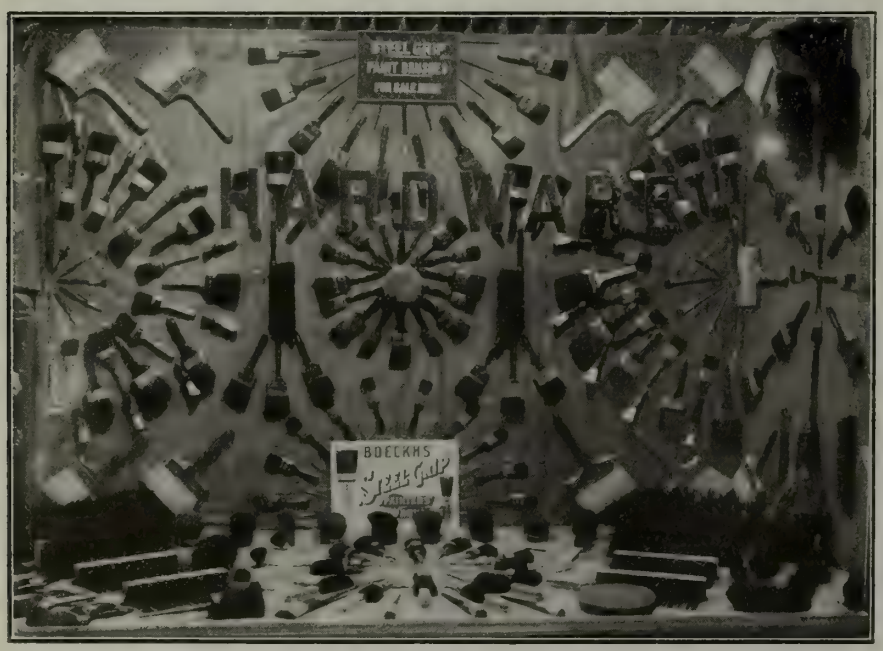
It is worth pointing out too that the painting once done is done for a large number of years. The most delicate tones will last. Dirty—yes, they will get a little dirty, but what matter. They can be washed. Think of the way that will appeal to the housekeeper—a wall that can be washed and kept as bright as when first decorated.

Every one who has been in a house at the time a move is in progress knows how the walls then appear. A picture is taken down, and the place where the picture has hung stands revealed, the paper behind not having faded as much as had the other. There is nothing like that with the walls decorated with interior paint. They are durable. They do not fade. They get a little dirty but they can be cleaned. There is nothing unsanitary about them, and they can be had economically.

Undoubtedly there is a large business in this material yet to be developed. It is for the hardwareman to do much of the educational work.

Feature Paint Accessories and Supplies

Dealers Find That it Pays to Push the Sale of Brushes and Similar Supplies —It Improves the Demand for Paint Considerably—Methods of Keeping Supplies to the Front.



The handling of paint accessories can be made a valuable feature of the paint trade. A stronger statement of the case might be used. Accessories SHOULD be made a feature of the trade. The sale of accessories both directly and indirectly helps the sale of paint and varnish.

Figure it out this way. The dealer who builds up a good paint business does so partly on the strength of good service. He must supply satisfactory paint, of course, but he has got to see that the customer is satisfied on all points as well as with regard to the quality of the goods. If a customer is not supplied with everything needed to do the work well, he is not going to be satisfied. Men will buy floor paint and try to put it on with an old brush that has been around the house for years until the bristles have become ossified. Are they satisfied with the results? Certainly not. They leave the floor streaky and probably lay the blame on the paint and the dealer who sold it. If the dealer had gone to the trouble of selling brushes, he would have made nothing but satisfied customers.

It is a wise rule to set that a brush should be suggested to every purchaser of paint and varnish. It is not sufficient to do it sometimes. Do it always. A young hardwareman, who has worked up a good business in paint, informed the writer recently that he had adopted this as a rule for all members of his staff. "Do you need a brush?" has become quite as invariable a phrase after a sale of paint has been closed as "good day." This rule was adopted some time ago and the dealer states that he believes a sale is made at least three out of every five times. His sale of brushes has been more than trebled in that time.

There are many other lines which come under the head of paint accessories. Furniture polishes, putty, paint remover, graining tools, are all in constant demand. What is more, articles of this nature are needed in the home but are often not asked for because the customer never thinks of them. Clearly then, it devolves on the dealer to do all the thinking.

Some provision should be made for the display of such goods in the paint department. As a general rule, they are kept in drawers or in packages or on a top shelf; somewhere out of sight, at any rate. In the best regulated stores, a silent salesman is provided for the display of brushes and general supplies, the same being placed in close proximity to the paint stock. This method cannot be too highly commended. The goods sell themselves. The customer is made to realize his needs by inspection of the articles thus displayed.

Display of brushes in store window of D. W. Douglas, Campbellford.

A profitable advertisement of paint specialties.

Should be Advertised.

Paint accessories should be advertised as well; advertised in the many ways that the dealer has at his command. They should be given publicity through the medium of window displays. The accompanying illustration of a brush window in the store of D. W. Douglas of Campbellford, shows that it is quite possible to make up striking and attractive displays. Splendid results were obtained in this instance.

Advertising space in the papers should also be given to paint specialties and accessories. James & Reid, of Perth, have realized this as the advertisement reproduced herewith attests. By an appeal of this nature, the public are made to realize that the spring brings with it a need for just such lines for the beautification and preservation of property both indoors and out-of-doors.

MAGNETS

TALK NO. 2—PROMOTION

An Ad. is the advance agent of a product. In the old days the successful theatrical advance agent was a man with flowing moustache and many flourishes; to-day he is a quiet little business man.

The day of boastful advertising is past. Successful business men realise to-day that the most powerful sales-getting magnet is the plain unvarnished truth. Those who use it most succeed most.

The simple story of what Lowe Brothers "High Standard" Liquid Paint will accomplish requires no boast to be convincing. We are educating communities from time to time on the paint question with honest straight-forward literature.

One superior article often proves the pivot of Successful Business Building. The combined magnetic forces of Lowe Brothers advertising and "High Standard" paint will permeate your whole business, giving new energy and drawing power.

Weekly Market Report --- Paints

A HEAVY WEEK.

The market has been featured this week by a remarkably heavy demand for prepared paints and all kinds of specialties. A record spring trade is being done.

No price changes are recorded but everything points to developments shortly. White lead and linseed oil will likely go up and a small decrease seems not unlikely in turpentine.

MONTREAL.

Montreal, April 26.—Possible advances in white lead and linseed oil are causing the handlers to watch the market with great care at the present time. The likelihood of an increase in lead, of course, is owing to the rise in the pig—a rise which seems more likely to continue than to cease. Linseed is strong at the present time, but that an advance will come immediately is far from certain. Indeed there is now some variety in the prices quoted, some handlers being a cent or two below others.

Mixed paints are moving splendidly. The shipping departments have their hands full, being rushed to get out the orders. The retailers no longer look upon delays in shipment with any degree of tolerance. They want the paint, and they want it right away, for orders are being placed with them daily. Fortunately the shipping facilities have improved a good deal and the delays are not great.

Turpentine.—At the present time there is a good demand for turpentine. It might be thought, therefore, that the price would remain strong, but rather there is a downward tendency. Still quotations are at .70, but it seems quite likely that prices will drop slightly in the next few weeks. Yet, as has been said before, with turpentine one never can tell.

White Lead.—There are those who consider that the price of lead is already high enough, but none of these are corroders or handlers. They are paying advanced prices for pig lead, and realize that unless there is a change in the price of the raw product, they will not long be able to market the finished product at the present figure. It seems quite likely, indeed that an advance will be struck before May is over. If the rise does come the English coal strike will be partially responsible.

Of late there has sprung up a big demand for linseed oil. The stocks at the present time are fairly good, but it is rumored that the seed is scarce, which, if true, will have an influence on prices. The heavy building operations are largely responsible for the demand. Painting is already being extensively undertaken, and where painting is being done there linseed oil is being used in large quantities. For floors, too, the oil is now wanted. Naturally the demand has grown considerably.

Mixed Paint. — Last April—that is April of 1911—was a poor paint month. It was cold and wet, and few there were who thought of getting to work decorating. This April has been entirely different. Operations have been extensive. The business for the month is far ahead of the corresponding season last year, and the hopes are that May will surpass May of last year, though then much of the left over business of April was transacted.

Glass Still Wanted.

Glass.—The advance in prices has not had any noticeable effect upon the demand. Dealers are recognizing that there is no great likelihood of a lower level being struck in the near future. They are, therefore, laying in supplies. A few saw the advance coming and bought largely. They naturally are not buying now but the heavy orders of the others prevents any falling off being noticed.

Paris Green.—Retailers are now selling to some farmers. They know that the demand will grow, and are now laying in a good supply.

TORONTO.

Toronto, April 26.—The past week has been an exceptionally busy one for the paint manufacturers and jobbers. The mild weather has brought the spring trade along with a rush. The dealers are now experiencing a heavy demand for paint and are compelled to place large supplementary orders. The demand to date has been far in excess of previous years and there is every reason to believe that this pace will be maintained throughout the year.

No price changes have been made during the week but a number are pending and future developments are worth watching closely.

Oil is Firm.

Linseed Oil.—The price of linseed oil remains firm and must continue so for some time as the price of flaxseed has again advanced in the North-west. Presents figures would indicate that there is no profit for the crushers on present prices. Consequently they are raising their price one cent per gallon. No change has been made in the local jobbing price, although there is a firm tendency noted and an advance shortly would not cause any great measure of surprise. Everything points to continued firmness in the oil market for some time to come. Prices are 96 for raw and 99 for boiled.

Turpentine.—Owing to the fact that the market price of turpentine at present is more favorable to the buyer than it has been in other years at this season, there has been a fair demand from the retailers. Stocks of turpentine in the hands of local jobbers are very light as they are only buying from hand to mouth. This course has been necessary to avoid loss, owing to the uncertainty of the market in the southern States. The price has remained the same as last week, 69 cents, but there have been rumors of the likelihood of a slight decrease. Whether this will come is hard to say but conditions on the primary markets seem to point that way. For the month of March the receipts of turpentine at the shipping points were some 700 barrels less than for the same month last year. Notwithstanding this, there has been a fair supply of stock on hand at Savannah and the market is quiet.

In rosins the prices for the fine grades have been very materially reduced while the prices for the darker brands, from G down to D, have remained fairly normal. Considering the quantity of rosin held in stock at the beginning of the year, it looks as if there might be some further decline in all the grades in the near future.

White Lead Firm.

White Lead.—The price of white lead has not been changed although a feeling of certainty exists that there will be an advance before long. There is a good demand.

Glass.—The uncertainty which has existed with respect to the price of glass has not hurt the demand. There is a good call for this time of year.

Putty.—There is an active demand. Prices are as follows:—Standard bulk in casks, 2.20; in 100-lb. drums, $2.40; in 25-lb. drums, $2.50; bladder in barrels, $2.65. Pure putty prices are as follows:—Bulk in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder in barrels, $3.

Prepared Paints.—The demand for prepared paints is large. There is a particularly good demand for floor paints, house paints, wall colors and other specialties used for house decoration. Carriage paint is also moving well.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

Sterling Pure	1 60
Maple Leaf Paint (Imp. V. & C. Co.)	
Jamieson's Crown and Anchor brand	1 60

The Famous British Brand

You are safe in featuring a line of paints that has made good in two hemispheres. For 78 years

"MINERVA"

PAINTS AND PAINT SPECIALTIES

have been prime favorites with experienced painters.

And they leave the dealer an excellent margin of profit.

Our many original and forceful selling helps have made "MINERVA" Paints the line with the strong demand.

Every can contains full Imperial Measure.

Write for details of our proposition. It will not obligate you in any way.

Pinchin-Johnson & Co., (Canada) Limited

377-387 Carlaw Avenue, Toronto

Established in England in 1834

(K 64)

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time during the winter months, NOW, to investigate the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO

66-68 FRASER AVENUE

For Twenty-seven Years Manufacturers of Self-measuring Pumps, Gasoline and Oil Storage Systems, Self-registering Pipe Line Measures, Dry Cleaning Systems, etc.

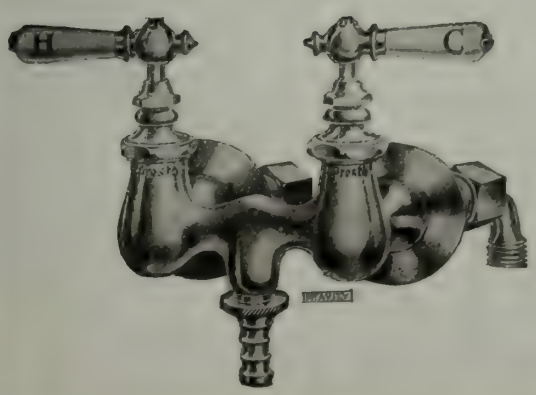
The High Quality of Our
HEINISCH TINNER SNIPS



The "VULCAN"

has made them the tinners' favorites. This quality is due to the great care taken in selecting materials and the tempering which is done by experts.
The "Vulcan" Snip is designed especially for cutting curves, all irregular shapes, cornice work and small circles down to 3 inches in diameter.
Recommend them to your customers—we guarantee the highest satisfaction. Get them from your jobber.

LIN-UNA FAST TO LIGHT BURLAP

Present day ideas demand utility and simple, inexpensive beauty in home building and decoration—good taste rather than extravagant expenditure sets the style.

In no other direction is the trend towards simplicity and individuality more marked than the prevailing treatment of furniture, woodwork, and especially WALLS.

The owners of beautiful walls take a pride in them, the credit for that is attributed in numerous cases to LIN-UNA BURLAP.

Can you imagine anything more attractive than a beautiful paneled dado of LIN-UNA BURLAP in your dining room, living room, hall, den, etc. Not only do they give forth comfort and good cheer, but create a lasting impression of good taste and refinement.

LIN-UNA fast-to-light Tapestry BURLAPS are essentially and admirably adapted for their original purpose—for beautifying the walls of the better city and country homes, churches, clubs, schools, hospitals, public buildings, theatres, etc., and are extensively used for this purpose. The colors are rich in tone, selected by competent artists and are fast to light as can be obtained by modern methods of scientific dyeing. The cloth is especially made for the requirements of the trade and is shrunk in the process, despatched out to a perfect edge for butting or joining, and no effort is spared to produce BURLAP OF FIRST QUALITY.

All S-W Agents and Dealers should make record sales and big profits this Spring

Right now is the time to get busy with your Spring paint window displays. Don't wait for the other fellow. Begin now to let the people in your locality know that you are the local Sherwin-Williams distributor. Make special Sherwin-Williams Paint and Varnish displays each week. The window trims we have for you this year are the best we ever had. See that your outdoor signs are put out at once along the country roads. Go around and make a list of the property owners whose houses and barns need painting and let us send them our personal letters on S.W.P. and Commonwealth Barn Red. Write us for free newspaper electros. Start early and beat the other fellow to it.

Our national advertising in the magazines and farm papers is now working in full blast. The Sherwin-Williams reputation is by long odds the widest and most favorable in the Dominion. It is founded on quality and extended by publicity. Let's all work together to make sales and profits this Spring the biggest ever. Call on us for all the help and advice you want. Our whole organization is at your service. ***Begin Now!***

TORONTO, ONT. April 22nd, 1912.

Editor, "Hardware & Metal",
#143 University Ave.,
TORONTO.

Dear Sir;-

Kindly cancel our ad. in "Hardware & Metal" of this week, as we wish to use the space in explaining to our customers why, for the past few weeks, we have been unable to make better delivery of our products.

It is only about eighteen months since we began manufacturing our lines in Canada. Our plant, we believed, would, under ordinary conditions, meet our requirements for two or three years, but in less than six months we found it necessary to enlarge.

Our first improvement was a large Force-Draft Melting Building, then a new Reducing and Filtering Building, this was followed by a new Tank and Storage House. We then bought more land and enlarged our Grinding Department, and have just completed a large building, which we have this week begun using as a stock warehouse and shipping building.

A little over a year ago we started a heavy campaign of advertising our Green Label Varnishes and Jap-a-lac to the consumer. Last fall we enlarged our discounts to the dealers and lowered the list price of Jap-a-lac to the public, and while we anticipated that this would make a still greater increase in our business, it grew faster than we did and for the past few weeks we have been unable to make prompt shipments.

We are now occupying all the new buildings and beginning with this week we will be able to make prompt deliveries of all orders received, and we wish to thank those dealers who were lenient with us, during our inability to make better deliveries.

If you will be kind enough to reserve space for our ad. in your next issue, we will be very glad to furnish you with regular copy for same in a few days.

Yours very truly,

(Signed) THE GLIDDEN VARNISH COMPANY,

TORONTO, ONT.

EDITOR'S NOTE.—We have received permission from The Glidden Varnish Co. to reproduce the above letter explaining their position with our readers.

GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure

finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

THE MARTIN-SENOUR CO., Limited

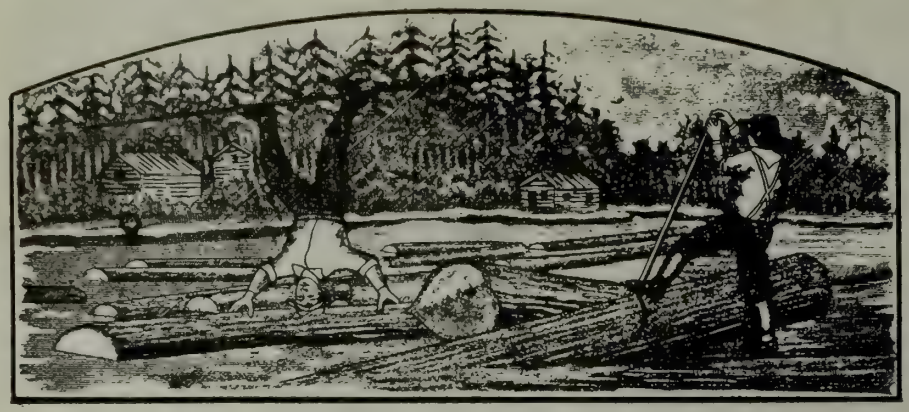
Varnish to Stand the Weather

For use on Motor Boats, Yachts, Canoes, etc., varnish must be of the best quality. Those of your customers who are water sport enthusiasts will be purchasing varnish now to put their craft in shape. Sell them DOUGALL VARNISH and be sure that they get the best.

DOUGALL MARINE VARNISH

Is The Very Best Obtainable And Guaranteed To Give Satisfaction On All Work.

It gives a very high polish, which it retains in spite of exposure to the weather. The ravages of sun and wind do not affect it, and the action of spray will not spoil its appearance.



Unlike most varnishes, the action of water will not cause it to turn white.

THE VARNISH THAT LASTS LONGEST.

THE DOUGALL VARNISH COMPANY, Limited

305 Manufacturers Street, - Montreal

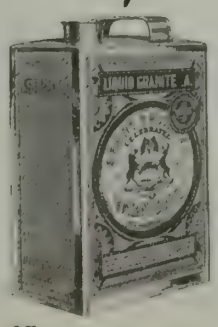
Talking to the Point

CLASSIFIED WANT ADS get right down to the point at issue. If you want something, say so in a few well-chosen words. Readers like that sort of straight-from-the-shoulder-talk, and that is the reason why condensed ads are so productive of the best kind of results.

CLASSIFIED WANT ADS are always noticed. They are read by wide-awake, intelligent dealers, who are on the look out for favorable opportunities to fill their requirements.

TRY A CONDENSED AD IN THIS PAPER



Put the Same Varnish Can on Your Shelves that the Public Sees in the Magazines

The prominent publicity that is being given to the Berry Brothers' Varnish Can, month after month, gives an added value to the display on your shelves.

Even if you fail to put out any of our attractive store advertising, your shelves will carry an advertising message to every man, woman and child that enters your store.

A solid front of Berry Brothers' Varnish Cans will help you "cash in" on our effective advertising in a way that is possible with no other line.

Berry Brothers' line includes every varnish, shellac and kindred product that any dealer needs to fill all his demands.

Gentlemen:—

We are pleased to announce that we were to-day favored with a visit from Mr. Bert Hamilton of Hamilton & Stott, of St. Thomas.

While here Mr. Hamilton on behalf of the firm of Hamilton & Stott completed arrangements whereby they purchased from the Jones Register Co., of Toronto, their entire stock of Jones Registers, floor registers, borders and faces, wall pipes and fittings, and everything connected with the heating business formerly owned by the Jones Register Co., of Toronto. From this date Hamilton & Stott will be successors to the Jones Register Co., of Toronto, and all Jones Registers furnished to the trade in the Province of Ontario will be furnished by Hamilton & Stott, of St. Thomas.

The Jones Register Co. still retain the book accounts, and all collections of the Jones Register Co.'s book accounts will be made by the Jones Register Co.

Yours very truly,

The Mechanic Special Service Ladder

This ladder is all that its name implies and is highly prized for use in the shop or wherever a handy ladder suitable to sustain a great weight is required. The legs are connected by rounds so that one or more may make use of the ladder at one time, and the rounds and steps are staggered so that a plank can be placed through and find support every six inches. The ears are of malleable iron and steps are trussed.

If you want to increase your profits, that ladder will help you.

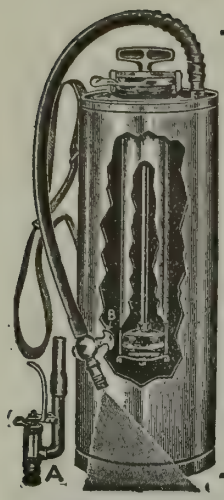
Nicholson-made Files are the Standard of File Quality

The entire output of the Nicholson File Company in 1864 was 100 dozen per day. At the present time 16,000 dozen Nicholson-made Files are sold every day and shipped to all parts of the civilized world. Unvarying good quality, coupled with progressive methods and strict specialization, is the cause.



In Canada these are the well-known factory brands made by the Nicholson File Company:—

"AMERICAN" "ARCADE" "GREAT WESTERN" "GLOBE"
"EAGLE" "McCLELLAN" "KEARNEY & FOOT" "J. B. SMITH"

Nearly every file user in Canada has a preference for one or more of these lines above all others. You can stake your reputation upon their absolutely uniform and satisfactory quality.

YOUR JOBBER KNOWS!

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

POTATO PROTECTION

is best given by the Horse-Power SPRAMOTOR, as the illustration shows. The work is thoroughly done at 15 minutes to an acre. Four rows, three nozzles to a row, adjustable in height, width and direction. Nozzles will not clog. Air tank, 12 gals., gives guaranteed 125 pounds pressure with all 12 nozzles working. Automatic and hand controlled. Agitator clean-out; pressure relief into tank and nozzle protector under driver's seat.

The SPRAMOTOR is made for 1 or 2 horses or to be operated by hand. Equally efficient for field or orchard. Saves time and labor. Saves crops too.

Send for free treatise on crop diseases. AGENTS WANTED.

EASTERN AGENTS—Branch office and warehouse, 9 Place D'Youville, Montreal, Que.
WESTERN CANADA—Warehouse, 117 Market Street, Winnipeg, Man.

"Hercules" Is The Backbone Twist Drill

The strength of a drill is in the steel. If the steel loses its strength during the process of manufacture, the drill suffers.

"Hercules" Drills are twisted while hot from **High Percentage Vanadium High Speed Steel.** This process leaves the steel undisturbed and retains its original toughness.

These drills hold out longest between grinds because they have the backing.

The taper shanks, usually one size larger than ordinary, prevent tang troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalogue 74-C.

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

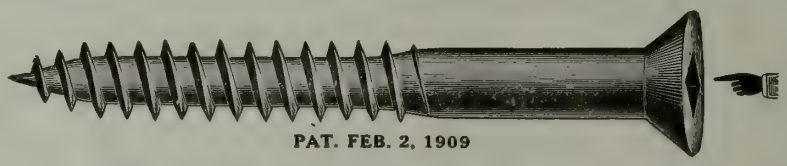
There Are Lots of Men With $70.00

Quite a few go to your store and could be tempted by a "Ross" High Velocity Rifle.



In fact every sportsman, who has the price, will look longingly at this arm and require very little coaxing to buy it.

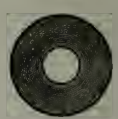
And this one sale is not a bad day's work!

If you have not any in stock, write at once for discounts and full particulars.

THE ROSS RIFLE CO., .:. QUEBEC, QUE.

PAT. FEB. 2, 1909

ROBERTSON SOCKET HEAD
WOOD SCREWS



Have a decided advantage over other styles of wood screws. By having a square hole, into the centre of which a specially designed screwdriver fits snugly, it does away with all possibility of slipping, which often proves disastrous to the screw, and wastes a considerable amount of the workman's time.

They will sell on sight—get our prices at once.

We also manufacture high-grade Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.

IF IT'S AN
ANCHOR BRAND
WRINGER

THAT'S ALL YOU NEED TO KNOW ABOUT A WRINGER

The quality goes in before the name goes on. Do you handle them? If not, why?

LOVELL MFG. CO.
ERIE, PA. U.S.A.

Pearson's Patent Poke No. 2

possesses several strong advantages over other makes, and will yield you a good profit.

It cannot slip off, doesn't wear the mane, and is very easily adjusted.

It is light, but very strong, and will prevent running in the field.

Does not interfere with the animal's comfort when lying down, and allows it to eat comfortably.

Guaranteed to be exactly as represented or money refunded.

Get our circulars and prices.

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Carborundum Co-Operation

IT is one thing to sell a dealer a bill of goods—it is quite another thing to help him sell what he has bought. Every time a dealer buys a stock of Carborundum Sharpening Stones he gets the full benefit of Carborundum sales helps—of Carborundum advertising that always has created the demand—of the prestige of Carborundum quality.

The Carborundum Company is doing more than ever before to aid the dealer to turn over his stock—to make his sharpening stone account one of his leaders.

Carborundum window displays—lithograph cut outs—circular matter—booklets—display cases—prepared newspaper copy—all free to the dealer, and are doing great work in identifying the Carborundum dealer as the dealer who sells more sharpening stones.

Have you our catalog—discounts—trade help offers. A letter will bring them.

The Carborundum Company, Niagara Falls, N.Y.

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.

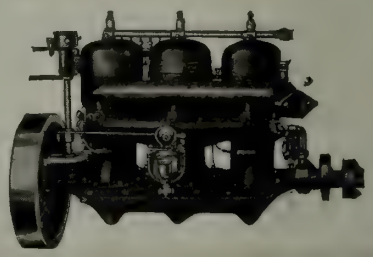
Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

YALE

No Locks are Yale Locks unless made by Yale & Towne

THE CANADIAN HOME OF YALE LOCKS AND HARDWARE

Yale Products now made in Canada

Having established our own plant in Canada, we now propose that every house owner, builder, architect and contractor shall know about Yale locks and that all good dealers sell them.

Back up our magazine campaign with good store and newspaper advertising

We are reaching purchasers of Yale Products in your locality. You should let them know *you* have the goods. We furnish free to dealers:

Window Displays

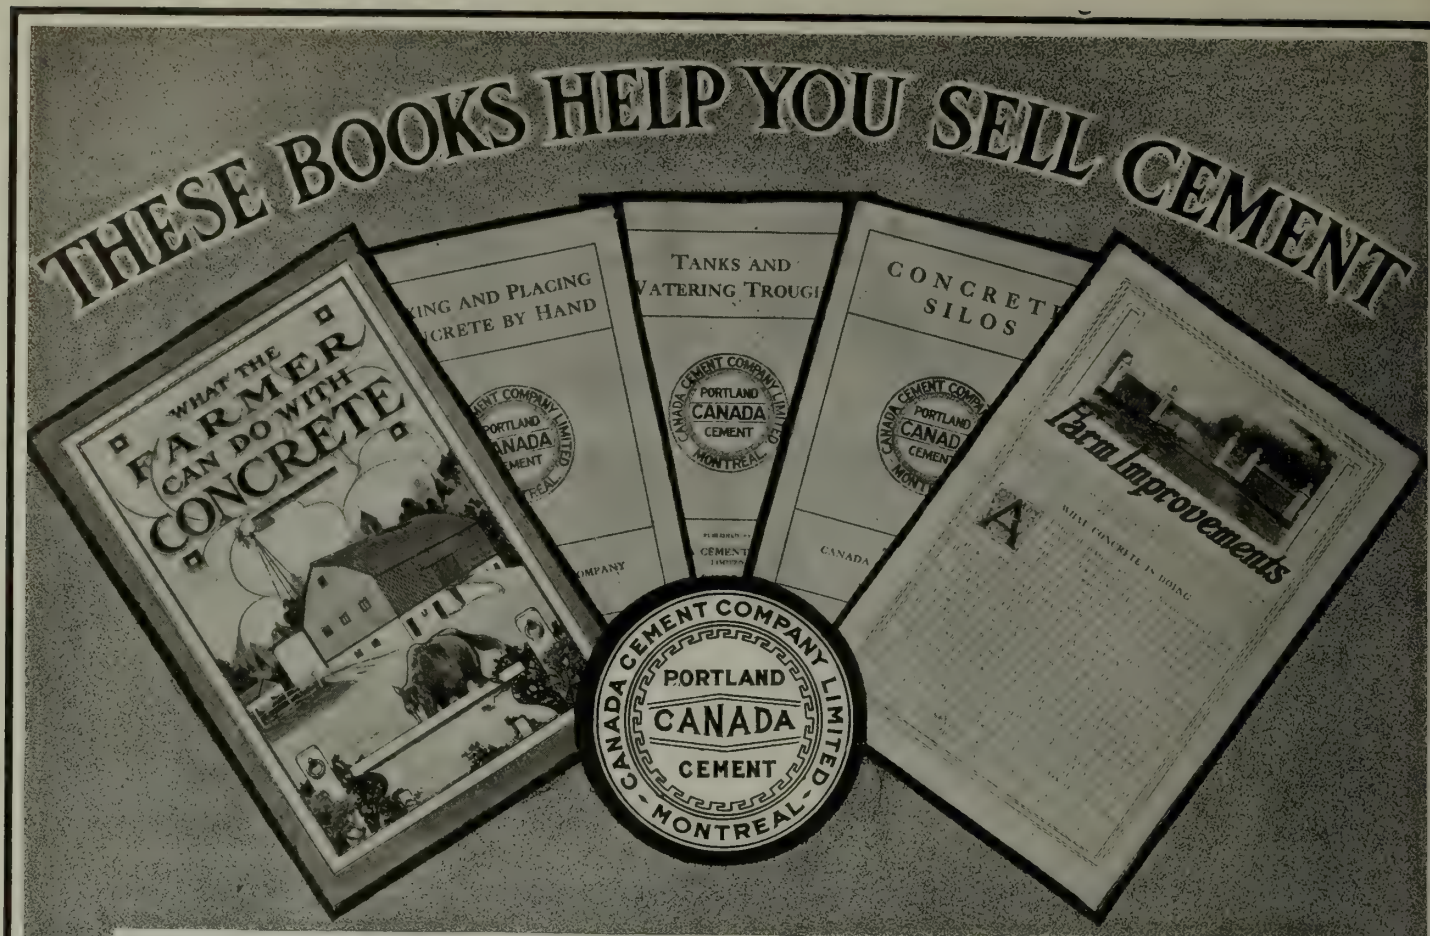
Illustrations and diagrams enabling you to duplicate striking and novel displays worked out by our window trimmer.

Newspaper Advertisements

Strong, bright, attention-getting newspaper advertisements, in plate form, all ready to print, in various sizes. Good pictures and trade-getting copy.

Printed Matter

Booklets and leaflets for counter distribution and mailing to customers, illustrating and describing the Yale Products you sell. Proved trade builders.



Dealers' Helps are shown and described in our booklet, "Yale in Canada." Send for it.

C54

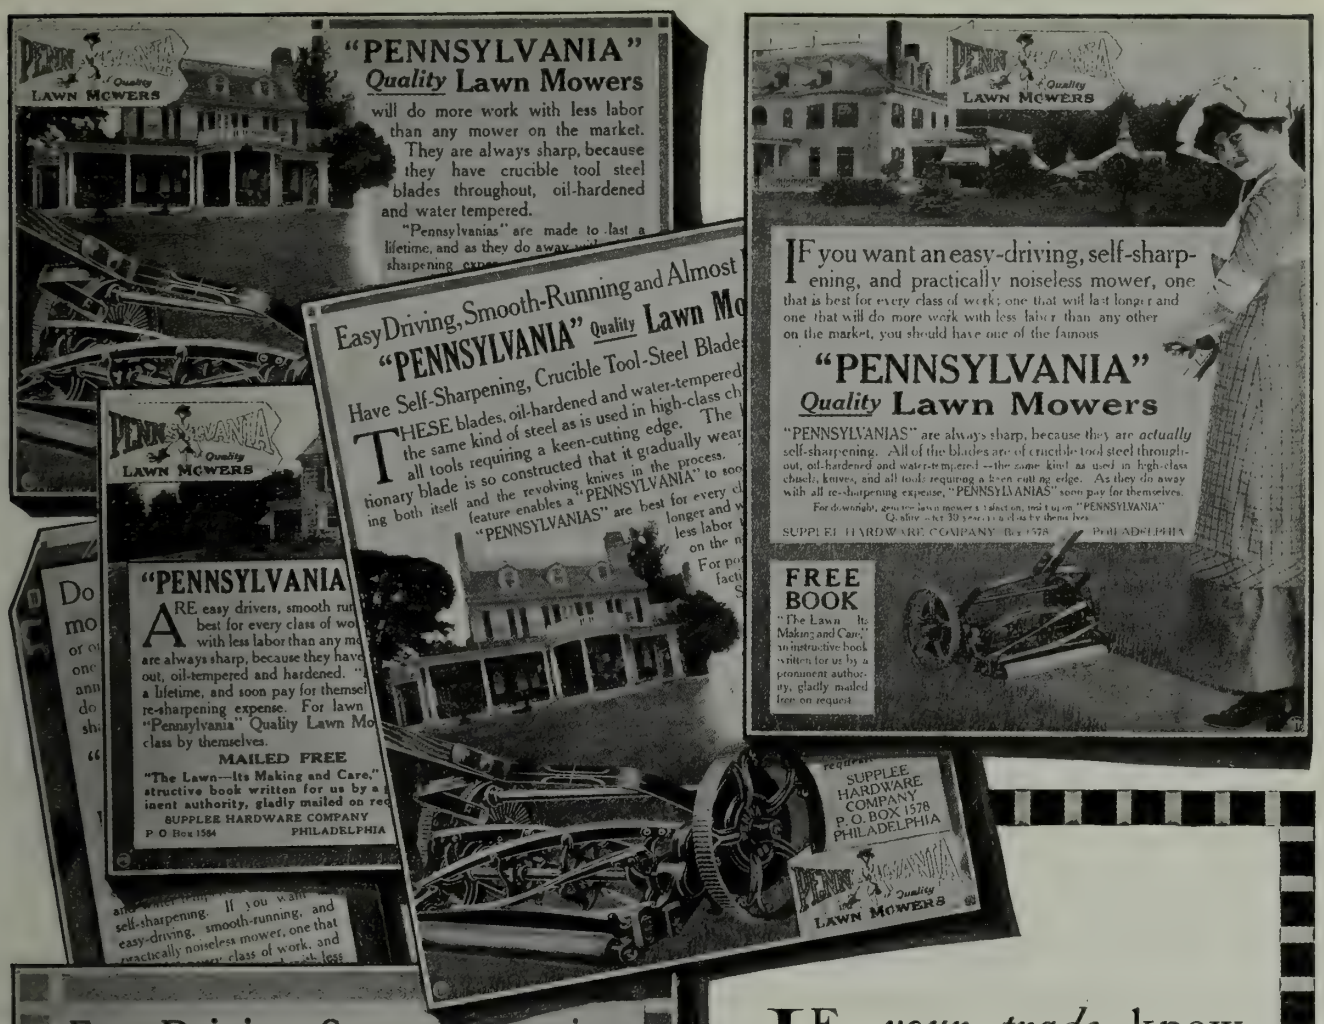
Is your profit keeping pace?

Cement has become one of the farmer's daily necessities. His demand for it, active twelve months in the year, is growing by leaps and bounds.

The demand is being stimulated by the most energetic educational campaign ever undertaken in Canada.

A $3,600 prize Contest for farmers was conducted in 1911, and the second contest will be held this year. Advertisements in newspapers and farm journals — The book, "What The Farmer Can Do With Concrete"—A quarterly magazine, "Farm Improvements."—Booklets on every phase of concrete work—Lectures to farmers at agricultural colleges. These are some of the means now being employed to increase the demand for concrete."

Are you getting your share of the profits from this publicity?



We are anxious to help you get it. We will send you wall files, handsome steel signs and copies of all publications. Our Publicity Department is always glad to answer any inquiries you desire to make. In addition to this service, we send you the names of those farmers in your community who have inquired about concrete, giving you valuable "tips" on prospective purchasers.

Last, but not least, dealers who handle "Canada" Cement are building up a permanent trade on this newly-awakened demand, because they sell the Cement that always gives satisfaction.

Publicity Department, Montreal

Easy-Driving, Smooth-Running and Almost Noiseless "PENNSYLVANIA" *Quality* Lawn Mowers

HAVE SELF-SHARPENING CRUCIBLE TOOL STEEL BLADES THROUGHOUT

THESE oil-hardened and water-tempered blades are made from the same kind of steel as used in all tools requiring a keen-cutting edge. The lipped-edge stationary blade is so constructed that it gradually wears away, sharpening both itself and the revolving blades in the process. This self-sharpening feature enables a "PENNSYLVANIA" to soon pay for itself.

Another unique feature of "PENNSYLVANIA" mowers is their long wheel base operated by a train of gears on both sides, which insures smooth work over the most uneven lawns.

"PENNSYLVANIAS" are best for every class of work. They'll last longer and do more work with less labor than any other mower on the market.

For *permanent* lawn mower satisfaction, insist upon "PENNSYLVANIA" *Quality*—for 30 years in a class by themselves. Ask your seedsman or hardware dealer.

MAILED FREE ON REQUEST

"The Lawn Its Making and Care," an instructive book written for us by a prominent authority, gladly mailed free to any one interested. Write for your copy now.

A Line the People Want and Why

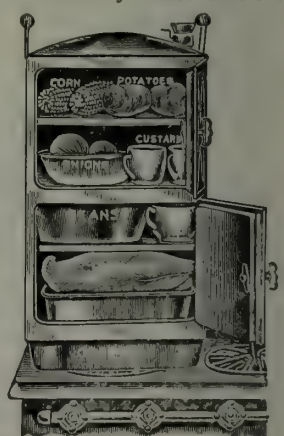
Ideal Fireless Cooker

Ideal Fireless Cook Stove

The people want a Fireless Cooker lined with material that will not rust, pin-hole corrode, crack, chip, flake or peel off.

PURE ALUMINUM is insurance against these things. With each "A" Style Ideal Fireless Cook Stove, we give a *written guarantee* that the lining is 99 per cent. *pure aluminum*. The people want a Fireless Cooker that is positive in its results.

THE "WATER-SEAL" TOP (exclusive with the Ideal) imprisons *all the heat* within the cooker, insuring a positive and absolute cooking unit which makes the Ideal *cook faster, cook better*, and keep the *food hot longer* than any other Fireless Cooker. It *roasts, bakes, steams, stews, boils.*



Ideal Steam Cookers

is another article the people want and have bought for more than a quarter of a century and dealers selling more of them every day. **It cooks a full meal over just one burner of any kind of stove** and does it better than a stove. All the nutriment of the food is retained, and flavors developed. Nothing can scorch, burn or overcook. A whistle calls 20 minutes before more water is needed.

Saves Money, Time, Work and Worry

No. 20, the popular family size, holds 16 1-quart jars in CANNING FRUITS AND VEGETABLES.

WE WANT EXCLUSIVE DEALERS to handle Ideal Cookers and our line of Household Specialties. Price lists and handsome illustrated catalogues, giving full details of sizes, styles, etc., are sent on request.

FORD AUGER BITS

are years ahead of competitors

It has always been our aim to manufacture a bit that would be better than other BESTS. We've succeeded. Tests have proved it. Tests made by men who used the same bit for years—thought there was none like it—wouldn't use any other, but heard so much of the FORD and its wonderful Patented Concave Twist that they tried it—working it alongside of their favorite bit. Lo, and behold, the FORD did BETTER WORK at almost DOUBLE the SPEED. This meant money to them—money in both time and quality of work. They used the FORD again and were further convinced of its superiority. To-day these men and thousands of other discriminating workmen use the FORD in preference to all others.

Easy and Profitable to Sell

Our terms allow you a generous profit and our advertising will create a demand and make sales easy for you. Each FORD Bit is backed up with our solid guarantee, and any dissatisfaction will be speedily made right.

Ford users are profitable customers, for once you sell a man a FORD you've secured a steady buyer. We want you—we'll help you. Will you write us? We'll send you a handsome illustrated catalogue, descriptive circulars, our terms to you, and name of your nearest jobber.

Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In "The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.

How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

Methods of an Aggressive Stove Dealer

How Picton Dealer Conducts This Branch of His Business—Keeps Stoves on the Floor the Whole Year Around—Brushes Them Every Morning to Keep Them Bright and Clean—Keeps Prospect Book—Uses Road Signs to Great Extent—Two Hundred Have Been Put Up This Year and This Number Will be Doubled—The Importance of Properly Installing the Stove.

By H. M. Moxon, of J. Moxon & Son,

Some time ago you asked me to contribute to the columns of your valuable paper, an article on my methods of selling stoves and ranges. I am pleased to do this, hoping that in some way my experience in stove selling may prove valuable to some of your readers in the same way that I have gained much information from the advice and experience of the other writers in Hardware and Metal. First, be careful in selecting a good line of stoves and ranges. Limit yourself to one line only, and then you are talking the same stove day after day and it also makes less confusion in the handling of repairs. Your customers will never forgive you if you are not able to furnish them with repairs for the stove you sold them.

Having made your selection, arrange your stoves neatly in rows. if possible, on your floor. Avoid crowding them together, and, above all, do not use them for shelves or keep the tops littered with other goods. See that they are kept well brushed and that the nickel is cleaned often.

Brush Every Morning.

We have made it a point lately to thoroughly brush our stoves every morning and thoroughly clean the nickel every Friday and so keep them shining. We have all our stoves mounted on trucks so they are easy to show and easy to sweep under.

On Display the Whole Year.

We think it a good plan to keep our stoves on display on our floor the year round. Some dealers, as soon as the heavy stove trade is over, huddle them away in some unused corner and forget about them till stove season comes again or till a customer comes in and asks to be shown one. Almost daily, even at this time of year, when customers come in and are being waited upon, they will wander back through our stove department and stand and admire the stock. It is an easy matter, if you see them taking an interest in the stove, before they leave your store to ask them if they intend buying. Possibly they will say no, but they have looked over your stoves and, if they meet with their approval, they are sure to tell someone else of them who will perhaps want to buy.

PLANS WORTH NOTING.

The firm of J. Moxon & Son have an enviable reputation as retail handlers of stoves and ranges. Their methods are brisk, aggressive and up-to-date. The accompanying article by H. M. Moxon, in which he states in detail, the broad lines on which their campaigns are conducted, will have a deep interest for every retail hardwareman. Some of the points made by Mr. Moxon are well worthy of full consideration.—Editor.

Keep Prospect Book.

They may say, "No, I don't want to buy now, but perhaps will later on." Jot this down in your prospect book. Always keep a prospect book. It pays. Now you gain this information by having your stoves on the floor the year round. You cannot otherwise.

Having made selection of stoves and arranged them in most attractive manner possible, if you have a window space you can spare, place a stove in the window. You can change this around, a range for a while, then towards fall, a parlor heater. But, above all, keep both stove and window clean. If you don't purpose doing this, better keep it out.

H. M. MOXON.

The Advertising Campaign.

Now you are ready to start your advertising campaign. On Saturday, our market day, we send circulars, telling of the quality of our stoves, to the market place. We instruct the boy to place them in the baskets or hand them to the farmers and their wives. Next, he visits all the hotel sheds and stabling barns and places them in the vehicles. We also mail a goodly number.

Take a prominent space in the newspapers and start talking stoves and nothing but stoves. Don't spoil your ad. by mentioning any other article unless it be something pertaining to the stove. If your space in the paper will permit, invariably use a cut and, if you have more than one cut, change them every week when you change the wording of your ad.

Road Advertising.

We are firm believers in the method of road advertising, providing it is properly done. Our company helps us out here a lot. There are five roads leading into Picton and on each road we have a beautiful lithographed sign supplied by the manufacturers, placed in a conspicuous place and not too far from town, advertising our stoves and ranges. Then we place the small signs furnished us, at intervals, on each side of the road for about five miles out, each way. Of course, we do not stop there. We could not expect the company to supply us with all the signs needed. Each year we make a number ourselves. We make them of galvanized iron, paint them yellow and letter them in black. We find these colors stand the weather best and they are more attractive.

This spring we have just finished putting out over two hundred and hope to have another lot ready for fall. Care must be taken not to put too much wording on the road signs. Just have enough so that a person driving by may read it at a glance. Try and have them as different in wording as possible and see that they are well put up, in conspicuous places. Keep them up by placing new ones here and there between old ones a few times a year. This is bound to bring results.

Then, when your wagon starts out delivering in the county (for in Picton we

have to deliver all the stoves we sell, to some point ten, twelve or fifteen miles distant, throw a few signs in the wagon and have them put up on the return trip at the farthest point away.

Talk Stoves.

When the stove season opens up, start talking stoves to every adult customer who comes into your store. If they tell you they are not going to buy. take them back and show them through. Tell them how good a stove you have and prove it to them by showing your line. They will surely tell others who may intend buying.

When the buyer comes along and expresses a desire to look at our stoves, we first ascertain about the size stove he thinks he would require. This avoids going over all your stoves for possibly he had his mind made up as to size when he came in. Our plan is, on finding this out, to take him to the best stove in the class he desires, that we have on our floor. If he finds it too high-priced, then we show him the cheaper ones and nine times out of ten he will turn back and buy the high-priced one.

Some Salesmanship Pointers.

Do the most of your talking on the dearest stove, but never start in on the cheaper one and work up to the dearer for he will be dissatisfied because he cannot buy the more expensive stove at the price of the cheaper one. Don't be afraid to take a stove apart and explain it. It tires a customer to stand and look at a stove and look at you and have you do the same. He feels you are not painstaking and don't know much about the business.

Start at the fire box and show him how the heat travels. Explain to him the construction of flues. If you have draw out grates, draw them out and tell him how easy it is to make repairs on grates without removing the furnace linings. Lift off a cover and let him heft it. Show him the linings on the bottoms of the centres. Lift out the reservoir and explain to him the weight of copper from which it is made. Instruct him in the use of all dampers.

Having done this, take up the general appearance, the design and finish of the stove and above all say nothing detrimental about any other make of stove. Every time you do so, you advertise the other fellow. We find it a good way, if a customer asks us regarding another make of stove, to simply say, "yes, we think all stove manufacturers to-day are making first-class articles." and there drop the subject as soon as possible. Never attempt to argue.

Get acquainted with your stove before trying to sell a customer, know every part of it and its entire construction so you would be capable of replacing every part. Unless you know this, you cannot expect to tell your customer something you do not know yourself. It may be tiresome to go through this ordeal with every customer who comes in, and you may have black hands and face when you get through, but it is the only way to sell stoves.

Closing the Deal.

And now if you feel you have imparted to your customer every bit of knowledge you have regarding your stove, immediately proceed to close the sale. Not too hurriedly, of course, but there is no use of a long waste of time at this stage. You should know whether you have convinced him or not and all that remains to be done is to take settlement.

The Importance of Delivery.

If you are in the habit of delivering your stoves, the same as we do here, see that whoever takes them out is competent. Some dealers have an idea that anybody who can lift a stove in a house and set it on its base and stick the pipes on any old way, is a good enough man to deliver stoves. We consider the delivery part a very important one. We are particular to see the stove sets perfectly square, particular about the running of our pipes to have them stand straight and look workmanlike. All this pleases the housewife. Having done this, we always brush our stove up, rub off the nickel and then proceed to show the operator thoroughly the working of the drafts and the place to clean out the flues. We also state how often they should be cleaned. Having done this, we invariably insist on starting a fire and, after the fire has started, we have the housewife work the dampers herself so as to be sure she thoroughly understands them.

By being particular in this way we have very little difficulty with stoves not working. If nothing goes wrong in the start it is never hard to convince a customer thereafter that it was not the fault of the stove.

In conclusion, I might say that for the past twelve years we have sold from one and a half to three carloads yearly of stoves and ranges and don't know of a single case where, under proper conditions, we have failed to give satisfaction.

Canadian Tube & Iron Co.

Copy of your Annual Spring Number reached our office.

We have no criticisms to offer in connection with the issue referred to, but, on the other hand, would like to congratulate your company on the able manner in which the Spring Number of Hardware and Metal has been prepared.

By Mack.

Almost every business man believes in the benefits accruing from a holiday occasionally and gives considerable thought to planning some suitable recreation.

These annual outings should be of value in different ways, but many do not show favorable results to those who are deemed fortunate enough to be able to indulge in them.

They invariably in such a case carry their business cares as mental excess baggage.

It is reasonable to think that unless we leave the anxieties of the store at home the anticipated pleasure of a respite from the daily task is largely diluted.

We are likely to return voting holidays a delusion and take up the work of management rather feverishly.

Even the afternoon intermittently taken in the summer season is tinged with worry on account of the consciousness that business is neglected.

For many employers who carry only a small staff it is found to be impossible, even for a short interval, to absent themselves from their usual surroundings.

Yet I have known hardware dealers under circumstances similar to those described, who were not aware of having undergone any hardship.

In fact they always were to all appearances enjoying their business.

They could take a moral holiday almost any day.

In advance of the question: "What kind of a holiday do you mean when you say 'moral holiday?' " I hasten to explain this form of relaxation.

The mental process concerned is to allow say for to-day the entire suspension of the moral obligation under which the majority of business men do their work.

Anyone may test the merit of this mental attitude at his leisure by exercising faith in others to some extent.

More than that a genuine holiday from the responsibilities of business will be acquired with some practice.

Gaining Space in the Store

A View of the Interior of the Store of the Island Hardware Co., Victoria, B.C.—Mr. Adams is seen at the rear wearing a hard hat—Mr. Wilson is standing at the left.

New Ideas for the Improvement of the Interior of the Hardware Store — Some Firms Are Dispensing with Side Counters—How Better Light Can Be Secured—The Plans Followed by the Island Hardware Co., of Victoria, B.C.

There has been a gradual evolution of late years toward new ideas in the construction and lay-out of hardware stores. The trend has been altogether in one direction; toward the acquirement of more space and light.

In the old-time hardware store space and light were at a premium. It generally happened that the stock was much too big for the store, and the proprietor just "jammed it all in" somehow and let it go at that. As a result the hardware store of the past generation was a dark and rather dingy place, with unwieldy articles piled up in unlikely places and the ceilings loaded down with a variety of goods. There was little breathing room in the old-time store and rather less light than room. It did not matter so much, for the bulk of the buying in those days was done by the men.

But fortunately "the old order changeth," yielding place to newer and better ideas. The hardware store of today is wide, airy and bright, with large plate-glass windows, neat fixtures and ceilings free from obstruction. Economical methods of storing and displaying goods have been found, so that the store interior is no longer cluttered and crowded. The improvement has been very marked.

Future Developments.

But the end is not yet. The future will see further developments along these lines. Already there are indications that future evolution may bring about the partial elimination of that seemingly indispensable feature of retail trade, the store counter.

First thought, one is impelled to ask, how could business be carried on without counters? They seem as necessary to a store as an engine to a train, a rudder to a boat or a roof to a house. It is over the counter that sales are made, that goods are shown and wrapped up, that the money is paid. Can the counter be dispensed with?

Some dealers say it can. A number of the largest stores in the United States have no counters. The goods are all on shelves or displayed in "silent salesmen" in the centre of the store. Customers can go right up to the shelves and inspect the goods at close range. The chief advantage of this arrangement is that there is a great economy in the matter of space.

Unique Canadian Store.

One of the first Canadian stores with this arrangement is the new establishment of the Island Hardware Co., at Victoria, B. C. A view of the interior of this store is herewith shown. By the elimination of counters, it has been found possible to house the stock in a store of elongated proportions. Although extremely long and narrow, the store has an appearance of roominess lacking in hardware establishments of much greater width. The lack of counters gives space at each side and allows considerable space for the display of goods in the centre of the store. The members of the firm state that the arrangement has facilitated the transaction of business.

The store in question was designed largely with a view to space and light. The great bulk of the stock is housed along the walls. The ceilings are absolutely clear and there is practically nothing to obstruct the light. Note the result. Daylight penetrates to every part of the store. It is the easiest matter to reach any article. The goods can be inspected with ease. The one criticism which may be offered is that the facilities for special display of articles have been reduced. The lack of store fixtures curtails possibilities in that respect.

Undoubtedly this store represents a development in interior arrangement which is somewhat ahead of the times. Whether the store of the future will be modeled along these lines remains to be seen. The objects aimed at are worthy of highest commendation, however. for light and space are greatly needed in the store.

Something About Firm.

The Island Hardware Co. are a new firm. F. T. Adams and J. D. Wilson are partners in the company, both practical hardwaremen. Mr. Adams has been secretary-treasurer of the Acme for the past five years. Mr. Wilson has Co. departmental store of Edmonton, been buyer with the Shore Hardware Co. of Victoria.

They are conducting their new business along aggressive and original lines. They carry a full line of everything pertaining to hardware. Their store is at 707 Fort street, Victoria, and is equipped with commodious warerooms at the rear

LARGE EARLY SHIPMENT.

A. C. Leslie & Co., Montreal, have received a cablegram from John Lysaght, Limited, Bristol, stating that they have shipped over 1,000 tons of galvanized and black steel sheets by the "Englishman" of the Dominion Line, the first direct steamship from Bristol to Montreal. Considering the serious delay caused by the coal strike, this shipment shows that there is a growing appreciation in Great Britain of the importance of fostering the Canadian trade.

PUBLISHED EVERY SATURDAY.

CONDITIONS ARE SOUND.

One of the most significant evidences of the general prosperity existing in all lines of trade in Canada is the fact that there has been little disturbance in labor conditions this spring. As a general thing, May-day finds the trades more or less in a state of disruption, the journeymen demanding increased wages, the employers breathing defiance. It is not uncommon for business in the larger cities to be disturbed in early spring by a succession of strikes of more or less lengthy duration. Toronto has seen no fewer than fourteen strikes in different trades at the same time.

While there have been strikes this spring, and some are still pending, for that matter, the situation has been exceptionally quiet. Demands for better wages have been advanced by the men, but the differences have been settled amicably and satisfactorily.

This is a striking evidence of prosperous conditions. The fact that higher scales have been fixed without demur in many cases shows the financial soundness of the employing interests and the confidence with which they regard the future.

A WORD ABOUT SIGNATURES.

Improvements in business methods during the past few years have been many. The telephone brought a silent revolution. The telegraph, and later the wireless, rendered still further aid, while the typewriter has come to do still more toward time saving.

Time saving. That is a cry of the age. It is to save time that letters are typewritten—to save the time of the sender and of the receiver. The minutes conserved by the legible writing of the machines would aggregate years.

But still there is a waste of time which hardly seems necessary. Etiquette decrees that the signature of a letter shall be in writing. Etiquette is responsible for much—and in this case is responsible for unnecessary worry, for moments wasted, and for violent words launched boldly on the office air.

How often, after the reading of a letter, is the whole office staff summoned to hazard opinions as to the characters represented by the hieroglyphics at the bottom of the missive.

Many famous men have a signature which looks like a seismograph's record of an earthquake. Many who are not great think they will achieve greatness by copying the idiosyncrasies of the great. They affect an unreadable signature. They need some such awakening as was given the young minister to whom an old Scotch body remarked: "It was na sa bad a sermon. You reminded me of the great Talmage when you blawed yer nase."

Indeed, it is often the weaknesses of the great that are copied, but it seems a shame that any should attempt to make their signatures more unreadable than they naturally are.

But after all, this question of signature would not be so troublesome if the firm's name were always printed on the paper. It might be a good thing to have the sender's name typewritten, too. This would act as a key to the signature, and would prevent much trouble, and much annoyance when the reply came with the name of the one for whom it was intended incorrectly spelled.

TO PROMOTE EFFICIENCY.

The wide recognition accorded to the need for efficiency is demonstrated by the organization of a body in New York to be known as "The American Society for Promoting Efficiency." The object of this society, according to its constitution, is "the promotion of efficiency, or the highest result obtainable relative to the effort expended, in every activity of man." It is open to anyone who takes a genuine interest in the question of the improvement of effort and result. The directors will investigate into every field of activity with the purpose of finding new methods and better systems.

Already a number of men of international reputation have become interested in the movement and it is becoming apparent that the work will be furthered by some of the best intellects in the world. The project is a gigantic one, but the committees now at work can be depended upon to unearth a vast amount of valuable and practical information.

HITCHING THE WAGON.

"That's a good suggestion. That's a good idea." These phrases are of a type which has become stereotyped. They are uttered daily by men in all walks of life—by hardware men among others.

There is a hopeful sign here. These phrases indicate that people are open to accept suggestions and ideas, which is a great thing, for as every one knows an open mind is the first requirement for one bent upon self improvement. But the fault with these phrases is that so often the "suggestion" or the "idea" is not followed. Its value is recognized but it is not harnessed. Hitch your wagon to a star, remarked Emerson. He put the word hitch first. To pick the star would show some intelligence, but the hitching is the thing of practical value.

It is absolute ly necessary to supplement suggestion by action. And it is absolutely necessary to read Hardware and Metal with that in view, if the best results are to follow. Some men read that garden tools might well be brought to the attention of passersby at this season. "That's a good idea," they say, then they forget about it. Others read this. They consider the various suggestions made. They consider their own stores—the peculiar needs, and the features which make a special display difficult. Then they set about arranging the display. Some of these men merely acquiesce—merely agree with the suggestion. The others act upon it.

A dealer recently read that the price of copper would likely advance. "It would be a good time to buy," he remarked to himself. But he put off buying and the prices were raised.

Another man read that copper was likely to go up. "I had better stock up," he thought. "Even if the ad-

vance should not come I will not suffer." He placed his order at once, and is now ahead of the game.

A suggestion is a fine thing, undoubtedly, but it is a more profitable thing to be able to act promptly upon a suggestion when this seems advisable. Procrastination is not only the thief of time but also of profits.

POINTED EDITORIALS.

There is no advertisement like the wagging tongue of a satisfied customer.

* * *

The promotion of efficiency is one of the biggest movements in the business world to-day.

* * *

There is nothing like moving to make certain lines move.

* * *

On Wednesday the trout season opened. Fishing tackle will now be in great demand. Play it up.

* * *

A query comes from a dealer who wants to know where he can get jail fittings. Of a surety this is a hardware line.

* * *

An Eastern dealer is enquiring now where he can secure machines for heading apple barrels. It is by preparing orders in advance that trade is secured.

* * *

There is no distinction gained by having an unreadable signature. A scrawl arouses no emotion but deep annoyance in the receiver. It provokes profanity rather than praise.

* * *

There is more in selling a stove, perhaps, than in selling any other hardware line. A large sum is involved and the salesman cannot close the deal until he has absolutely convinced his customer.

* * *

A counterless store may sound like an anomaly. Undoubtedly, however, the demand for space and light in the store is tending toward the simplification of store arrangements by the reduction of old-fashioned fixtures.

* * *

In one of Montreal's new office buildings a bronze letter box costing $1,100 has been installed. An expensive store house for a two-cent letter, yet many of these letters will bring returns beside which $1,100 would seem small.

* * *

Acting upon the suggestion in last week's issue of Hardware and Metal, a number of Montreal hardware dealers have arranged attractive window displays of garden and lawn implements. Their sales are repaying them for their trouble.

* * *

"Never go to extremes." is the advice of a veteran salesman. "The pert and extremely talkative salesman is only one degree worse than the human oyster, who can't find a word to say. Between the two types there is a happy medium. Find it and model yourself on that type."

* * *

"Hitching your wagon to a star," reduced to plain business terms, means setting out to do business according to the most advanced principles. It is not as difficult as the graphic wording of the phrase would suggest. The hitching part is not at all difficult, but it is an entirely different matter to "keep hitched."

Selling Stoves

A VETERAN hardware dealer once made the remark: "I've lived sixty hard, hustling years and I've done a lot of work in my time, but the one thing I'm most proud of is that I've sold more stoves than any man in this whole county."

Selling a stove is no mean task. The purchase of a stove is, to the average customer, a big event. It involves not only a large sum of money, but the future comfort of the household as well. The customer, therefore, is actuated by suspicion and cupidity in almost equal parts. He wants an all-around good stove, and he wants to get it just as cheaply as he can.

The salesman has to possess the practical knowledge of the mechanic and the tact of a diplomat. He has to convince; and conviction grows slowly in the mind of the stove customer. To close a deal requires in many instances not a little insight into human nature. No wonder then that the veteran hardware dealer referred to above was proud of his record as the champion stove salesman of his home county. He had proven himself a man of parts.

Stove salesmanship does not begin, however when the customer enters the store and end when he leaves. It is something like time: it has "no beginning and no end." A Winnipeg dealer tells of a customer who bought a range from him, explaining as he paid over the cash without any haggling, his reasons for placing his trade there. "I've noticed the stoves in your store for several years off and on," he said. "They have always looked so bright and fresh that I made up my mind long ago that when I needed a new range I'd come here."

Another dealer, who makes it a practice to "follow up" every sale, in order to make sure that the stoves he has placed are giving satisfaction, has made numerous sales on the strength of recommendations which the owners have given to friends. This form of "after salesmanship," unfortunately rather rare, is one of the most effective methods of drumming up new trade. Service given the public nowadays in most instances is so prefunctory and machine-like, that people appreciate real service when they get it. The man who is anxious to serve you **after he has made the sale** belongs to a rare species. If he proves to be sincere and painstaking, he deos not have to hunt for customers. They come to him in droves.

The point we have striven to make is that every step in the management of the stove department is part of the dealer's salesmanship campaign. The way he keeps his stock, his advertising, his delivery service, are all phases of salesmanship. If he lets the stoves in his store get rusty, if he neglects his advertising, even though he has all the gifts and wiles to exercise when he gets a customer within range, he is still a poor salesman. His fault lies in the fact that he neglects to do anything to bring the customers into the store. Skill in presenting facts and a persuasive tongue constitute one-half of stove salesmanship; careful and far-seeing management of the department is the other half.

The leading article in this issue deals with the management of a stove department in a most comprehensive way. It contains a number of aggressive suggestions and "live wire" ideas. Keeping the stock prominent in the store the whole year around is one of the best of them. Continuity, after all, is one of the most potent of forces. It's the man who sticks to his knitting every hour of the day and every day in the year who lands on top in the end. Intermittent effort seldom wins out in the long run.

Veteran Figures in the Hardware Field

No. 14.—W. H. Thorne, St. John, N. B.

Mr. Bok, the rather famous editor of The Ladies' Home Journal, has recently set out to discover the two greatest words in the life of a woman. Doubtless many suggestions have been made. We could have made a guess or two ourselves, and being also entirely ignorant of the subject we might have hit it right. But the two greatest words in the life of a man are really of more interest here. All things being considered, we would say that these two words are "yes" and "no," especially "no." No one knows just how much depends upon a "no." A man is made or marred according as he decides between these two syllables. The words mark the cross roads of life, and there is a cross road encountered every day.

A Hard Word to Say.

Upon occasions, "no," one of the shortest words in the dictionary, is one of the hardest to say. But there are men who are able to say it, and the picture of one of these is shown slightly to the right.

Mr. W. H. Thorne, of St. John, is among the best refusers. Not that Mr. Thorne is hard-hearted. He is hard-headed, perhaps, but hard-hearted never. Yet he has learned the gentle art of refusing. There is hardly an important office in or around St. John for which Mr. Thorne has not been asked to run. A staunch Conservative, he has yet many friends among the Liberals. He is a man large in mind as in body, and it has been felt that he could win almost any post for which he strove. So he has been urged to run for the legislature; to run for mayor; to run for the Federal House. But for some reason the running has not seemed good to Mr. Thorne. He has said "no." He has taken his part in politicial affairs, both of St. John and of the Dominion, but to run for office he would not. Perhaps he has felt that his business demands so much time that he could not give as much as he should to any outside cause with which he became actively connected. Quite likely this is the explanation of the many refusals. If so, the value of a "no" is patent, for Mr. Thorne has prospered.

Started Forty-four Years Ago.

It was in 1867 that Mr. James founded his hardware and metal business. In 1875 Richard C. Scovil was taken into partnership, and then in 1877 came the great fire which practically exterminated St. John's business section. But Mr. Thorne and Mr. Scovil were not dismayed. From the mayor they got a permit to erect wooden temporary quarters, and

Mr. Thorne Has Learned the Gentle Art of Refusing—There is Hardly an Important Office in or Around St. John for Which He Has Not Been Asked to Run.

in two such buildings they re-established their business.

Since this time, though failing health forced Mr. Scovil to withdraw, the business has been growing steadily; and a year or two ago the Montgomery building on King street was secured. This building, with its fine show windows and ample floor space, offers splendid facilieies for the handling and displaying of the wide variety of goods carried. Practically all lines are stocked, from belting and mill supplies to phonographs and fancy goods.

It is little wonder that the management of such a concern occupies a good deal of the attention of the president. Yet, Mr. Thorne does find time for other things. He is a good citizen in every way. He has had faith in the future of St. John—had faith when that future, to the casual observer, did not seem as bright as it does at present. He has done his part to help along every good civic movement. In him the idea of government by commission, so recently launched, found a stanuch friend.

Enthusiastic Yachtsman.

Mr. Thorne is a yachtsman. It takes a resident of New Brunswick to mention the name of the yacht club of which he is a member, but any one can spell it—oh simple in the extreme. The club is the Royal Kennebecassis. Now try to say that fast. Of late, Mr. Thorne has done little sailing, but a year or so ago his yacht, "The Dream," was a familiar sight on the St. John river.

A man, it is said, is known by the friends he keeps. Mr. Thorne is probably willing to admit the truth of this saying, for he numbers on his list some well-known men. Sir Leonard Tilley, one of the fathers of Confederation, was his close friend. Another is John Douglas Hazen—"Dare Devil Doug" as he is known by the profane in New Brunswick.

Members of Beefsteak Club.

Then Mr. Thorne is a member of the Beafsteak Club—an organization which goes in more for "roughing it" than for such gastronomical feasts as the name would imply. Camping is one of the club's main functions. All its members are enthusiastic fishermen, and annually an expedition is made to the south branch of the Oromocto. That's another New Brunswick name for the unfamiliar to practice on.

In the Oromocto there are salmon—fly salmon—and the members of the Beefsteak Club insist that they catch these. Certain it is that they return with long strings, and as there are no fish stores in the district whence they come, the good people of St. John are disposed to accept their word—that is about the fish that are shown, they could not be expected to believe the tales of the fish that got away.

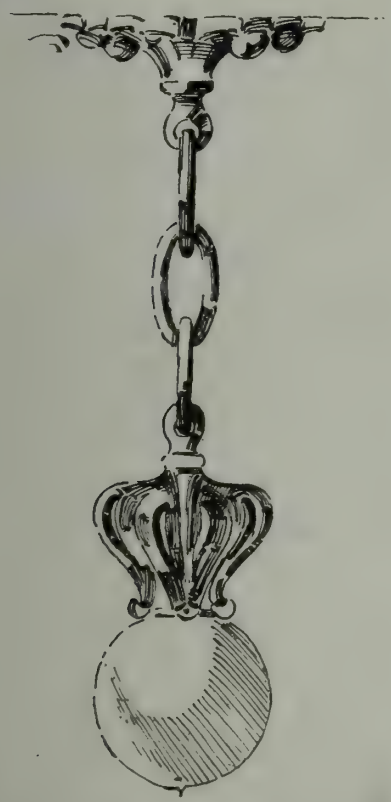
Does Much Travelling.

Outside of his fishing trips Mr. Thorne does a good deal of traveling, going south for a time every winter. Perhaps it is these trips—and the pleasure he takes out of them—which keep Mr. Thorne so young, and enable him to enjoy the hard work which he still insists upon doing. Perhaps it is these trips which still give him the strength to say No, when No seems the right thing to say.

B. Greening Wire Co.

We have looked through the spring number and certainly it reflects very great credit on you as publishers. This with your careful distribution should be a very valuable medium to the advertisers and at the same time should be a very valuable guide to the hardware buyer.

Allan Hills Edge Tool Co., Galt.



The Spring Number of Hardware and Metal has arrived, and must say that the general appearance of the same is remarkably good.

Sets and Single Fixtures in Demand

Moving and Housecleaning Season Suggests Purchase of New Fixtures to Many—Semi-Fine Lines Now on Market at Moderate Cost—Dealers Must Keep Up Their Stock.

Thanks to the ingenuity of man, which has enabled building to be carried on the year through, whereas a short time ago operations had to be entirely discontinued during the winter months, electrical fixtures now find a ready sale in the spring. Indeed, this is one of the best seasons for these goods, since new houses are being opened in goodly numbers, many of which have still to be equipped with electric lights. The wiring is in, but the fixtures have yet to be installed.

But there is a demand for electrical fixtures outside of that, for which the

Simple hall light made from cast brass. Cut loaned by Robert Mitchell & Co.

dwellers in new houses are responsible. As has been remarked before, this is the moving season. Now a move means a lot of inconvenience, and it means expense; but it also has some advantages. Let us be optimistic, and say a good word even for the moving season. It gives the householder a chance to get rid of some old things which have become almost eyesores. Among other things it gives him an opportunity to get a lighting fixture or two such as he has admired. Many single fixtures are being bought at this time, and they are being bought by those who are seizing this occasion, when the house is upset anyway, to have one or two lights which suit their fancy installed in place of some old models which seemed rather to detract from the appearance of the room.

No Time for Short Stock.

Undoubtedly this is not the time for the hardware man to allow his stock of electrical fixtures to fall low. The man who can present attractive fixtures at this time is going to secure sales.

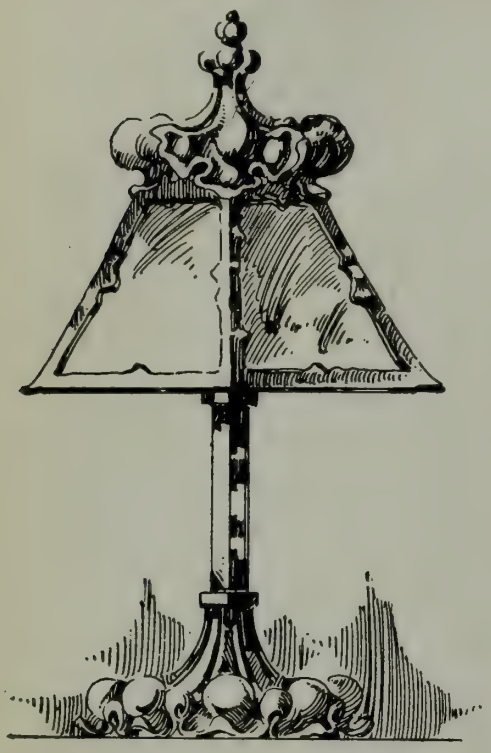
There is really no startling change in styles. Fixtures being sold this spring are much like those which were turned out a year ago. Some minor changes there are. Chains, possibly, are even more popular than they then were. But generally styles are about the same. There has been some new patterns put upon the market, however—patterns which would appeal to the hardwareman handling these goods. Some of these are too costly for the man who must get his market among people of moderate means, but there are others which can be retailed at a very moderate figure.

Hammered Brass the Thing.

Hammered brass is in great demand just at present, but all who are conversant with the subject, know that hammered brass means a costly article, yet much the same effect can be obtained somewhat more cheaply, as is shown by the cast fixtures which have been carefully prepared to represent the hammered article. They cost hardly half as much, and yet look very similar. There is little use saying the imitation is as good as the article imitated, yet the imitation is really good of its kind.

One of the lights which is moving most rapidly at present is the table reading lamp. In summer every one hopes to cut down the lighting bill. Yet all know that they will want to read after the daylight fails. It is very necessary then that the light in the library should be good, and what can possibly be better for reading than a reading lamp. There are some cast brass models in this line which have been moving well ,one of which is shown in an accompanying cut. The base and supporting bars are of brass, but the shade of the lamp is of art glass, which allows a soft light to illuminate the room.

Fixtures of similar make are now being marketed for all the rooms in the house; a simple hanging globe for the hall; clusters for the living room; hanging lights for the bedroom; and bracket lamps for the bedroom or den. Illustrations of several of these are given. They are all of lights of moderate price —none over fifteen dollars, and some as low as four. For the sum it is not hard to sell an attractive fixture. And especially is a ready market found at the moving and the housecleaning season. Then the need of a change is



Rich living room light, of the style which is now exceedingly popular — Cut loaned by Robert Mitchell & Co.

brought clearly home, and the fear of inconvenience is not so great. Things are so confused anyway, that even the man of the house—who hates house-cleaning even worse than he hates having his papers tidied away—is willing to have a little addition to the general disorder. Get it all over at once, is his policy.

Good Stock Necessary.

There are sales to be made just now; of that there can be little doubt. The only question is how to make them, and the first requirement is undoubtedly to

Library reading lamp—Good but not very costly.

have the stock. Advertising is good to draw trade. Some dealers are securing fine results by advising the people through the daily papers—that they can install all the fixtures needed at a certain figure. But you notice these dealers first have the fixtures. That is the great requirement. Fixtures must be carried before they can be advertised, or before a window display can be arranged.

Hardware Letter Box

Iron Partitions.

S. L. Adolph, Listowel, Ont.—"Kindly give me names of manufacturers of iron partitions for horse stables."

Dennis Wire and Iron Co., London, Ont.; Pedlar People, Oshawa, Ont.

Jail Fittings.

H. E. Burtt, Woodstock, Ont.—"What firms manufacture jail fittings?"

Goldie McCulloch & Co., Galt, Ont.; J. & J. Taylor, Galt.

Heading Machine.

Sumner Co., Moncton, N. B.—"Can you give names of manufacturers of heading machine for putting in heads in apple barrels?"

Mack & Co., Rochester, N. Y.; Challoner, Oshkosh, Wis.; Parkins & Co., Grand Rapids, Mich.

Manufacturers of Baby Buggies.

W. H. Turnbull, Brantford, Ont. — "Kindly give me names of Canadian manufacturers of baby buggies."

Goderich Wheel Rigs, Goderich, Ont.; Gendron Mfg. Co., Toronto; Gibbings Ltd., Granby, Que.; Canada Furniture Mfrs., Woodstock, Ont.

Gasoline Cooking Stoves.

E. Boucher, St. Hyacinthe, Que. — "Kindly give me names of manufacturers of latest style gasoline cooking stoves."

McClary Mfg. Co., London, Ont.; Thos. Davidson Mfg. Co., Montreal, Que.

Manufacturers of Cook Stoves.

Magladery Bros., Englehart, Ont. — "Who are the makers of the Family Peninsula and Cook's Friend cook stoves?"

Clare Bros., Preston, manufactures the Peninsula, and D. Moore Co., Hamilton, the Cook's Friend.

Angle Iron Fence Posts.

Jas. Flett, Wiarton, Ont.—"Who are the manufacturers of Angle Iron Fence Posts?"

Page Wire Fence Co., Walkerville, Ont.

Lawn Mower Grinders.

Winnipeg Tool and Forging Co. — "What firm manufactures lawn mower grinders "

R. Wood & Co., Oshawa, Ont.

Catalogues and Booklets

Peterboro' Locks.

The Peterboro' Lock Manufacturing Co., Peterboro', have issued a handsome 100-page catalogue, in the nature of a supplement to their 1908 catalogue. It has been arranged in a most systematic way so that any information can be obtained without difficulty. The publication has been divided into sections such as "locks," "hardware of ornamentation," etc. In addition, it is completely indexed. The printing is done on coated paper and every article listed is handsomely illustrated.

On a colored insert special attention is drawn to their New Departure front door set.

Cane's Woodenware.

Unique and attractive is the booklet issued by Wm. Cane & Sons Co., Newmarket. It is printed in four colors throughout and contains some highly original designs and illustrations.

Among the goods shown are washboards. pails, tubs, plates, egg crates, butter molds and clothes pins. It is one of the neatest and most attractive catalogues received in some time.

Fireless Cook Stoves.

The Toledo Cooker Co., Toledo, Ohio, have sent out a booklet which covers the use and manufacture of fireless cookers in a most comprehensive way. It contains an article of some length by C. E. Swartzbaugh, President of the company, in which he tells of the origin of the Ideal fireless cooker, the methods and materials used in its manufacture, how it should be used, the results obtained, and many other points.

The catalogue is printed in two colors and is well illustrated.

Roofing Supplies.

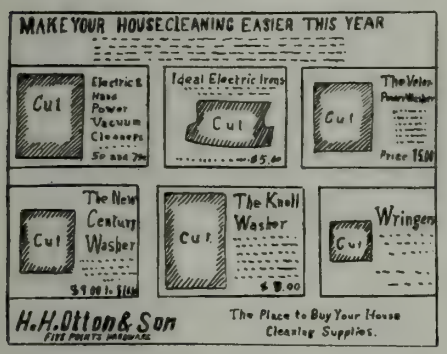
Wheeler & Bain, Toronto, have issued their annual spring catalogue of galvanized iron roofing supplies, eavetroughs, corrugated pipes and elbows, corrugated sheets, skylights, cornices, galvanized iron sheets, tin plates, ventilators, solder and hot air furnaces. It contains descriptions, illustrations and prices of their complete line and makes a handy reference for everything pertaining to sheet metal and furnace work.

Stoves and Ranges.

D. J. Barker & Co., Picton, have issued an illustrated price list of their stoves and ranges. It contains, in addition to the complete line of stoves the description of some of the parts, including the grate used in the manufacture of the Barker line.

Sporting Catalogue Issued.

Caverhill & Learmont, of Montreal, have just issued their annual sporting catalogue. It is an exceedingly attractive booklet, dealing especially with guns, rifles and hunting supplies. The need of having a catalogue relating to sleigh bells has been felt in the past, so a section in this sporting booklet is devoted to these goods.



A Plane Statement.

The Chopin-Stephens Co., Pine Meadow, Conn., have issued a folder under the heading, "A Plane Statement," which contains an interesting talk on the value and utility of wood planes. Their products are described and illustrated, as well as a number of other C.S. Co. products. The statements in this folder are marked as the result of 86 years' experience.

Use of White Space in Advertisements

Emphasis and Attractiveness Are Secured by This Means—Writers Should Endeavor Not to Crowd Space Too Much—A Retail Ad. With Many Good Points But Which Could be Improved by Providing More White Space.

A great many ad.-writers are inclined to discount the importance of the appearance of an advertisement. They appeal to the mind of the reader, not to the eye. "If I put the proper stuff into an advertisement, people will read it," declares one man. "It doesn't so much matter how the ad. is arranged, provided that it says something of interest."

A suggested lay-out which would provide white space and take away the somewhat crowded appearance.

This view is right to the extent that what an advertisement says is the main consideration. It is necessary, however, to make it attractive in appearance also. An advertisement must appeal to the eye before it has the chance to appeal to the mind. Many a forceful, well-reasoned advertisement is passed over because, typographically, it has failed to attract.

Crowding a Common Fault.

One of the reasons why so many newspaper ads. are so lacking in attractiveness is that the writer has too much to say. Brevity is not the common heritage of all ad.-writers. They are inclined to be verbose rather than laconic in their statements of fact. The result is that a large proportion of newspaper ads. are sadly crowded. Every square inch of space is used.

Now the judicious use of white space is one of the surest methods of adding attractiveness to the qualities of an advertisement. White space throws the type into strong relief and statements stand boldly out. Where the ad. is made up of a jumble of type, nothing stands out distinctly. The ad.-writer who tries to crowd too much into his space sacrifices emphasis. The use of white space is, therefore, one of the things which an ad.-writer should thoroughly understand and appreciate.

This rather lengthy preamble brings us to the consideration of an extremely creditable advertisement submitted for criticism by H. H. Otton and Son, of Barrie. After careful study, the writer has come to the conclusion that only on one score can a material criticism be voiced. The lay-out gives a somewhat crowded effect. There has been no use made of white space.

A Strong Advertisement.

Let us enumerate the good points first. The ad. is seasonable. It deals with a line of goods in which every thrifty housewife is interested at the present moment. The arguments are forcefully presented. It is well illustrated. It is specific. The prices are clearly marked. Taking it all around, this ad. is a good one and has resulted no doubt in a big sale of the goods enumerated.

There is room for improvement in the one respect, however. The ad. presents rather a crowded appearance which could have been eliminated by planning the lay-out as shown in the accompanying sketch. The removal of the rule under the headline would improve the general appearance and give more space. By setting the introductory argument in smaller type several advantages would be gained. First and foremost, it would be possible to leave a good margin on either side instead of running the matter out to the border and "white space" would thereby be provided. Then the headline would be given added prominence. The large-sized type following the headline in the ad. as it stands detracted from the strength of the headline. Another advantage would be gained in the chance to add prominence to the words "Try us and be convinced." Surmounted by smaller type this line would stand out with double strength.

By setting the reading matter accompanying each cut in smaller type, it would be possible to leave a narrow margin between each panel, adding considerably to the attractiveness of the lay-out.

The Headline.

In the opinion of the writer, the headline might have been made stronger. "Make your housecleaning easier this year," or just "Make your housecleaning easier," makes a suggestion in line with the rest of the advertisement. The fact that new goods are being advertised which tend to lessen labor would lend substance to the suggestion in the headline.

C. S. Norcross & Son.

We received the great Annual Spring Number of Hardware and Metal and assure you our ad. on page 228 is not only passably satisfactory, but is exceedingly so. It is well printed and the arrangement of the entire ad. strikes us as being the best possible.

A thoroughly commendable advertisement which has many good points but which might be improved in one respect.

Lesson 13--Complete Course in Cardwriting

Deals With the Popular Flowing Brush Script Lettering—Where to Use It and Where Not—Brushes Required and How to Use Them.

By J. C. Edwards, Copyright, Canada,1911.

Few styles of lettering lend themselves more gracefully to show card writing than does the Brush Script. At the same time it is strong, legible and easily made, unlike its more delicate parent the Outline Script.

There are many styles of this letter taught and some quite as good, perhaps, yet everybody has an individuality, or should have, and this style brings out the author's.

Where to Use it and Where Not.

Brush Script may be used where any other style of fancy letter could be employed, but never, or, rather seldom where the card proclaims a bargain. No fancy letter is in keeping with bargains. This mistake is too often made to the detriment of the sale and cheapening of card writing.

Capitals should be used only at the beginning of a sentence or as is shown in the card, capitals may be used on each word of a heading, providing, of course, there are no small words such as "and," "in," "it" and such like. The lower case is much more flowing and readable when alone, than if broken up by caps. Any proper noun should, as in ordinary writing, have a capital but in no case must a word be composed of all capitals.

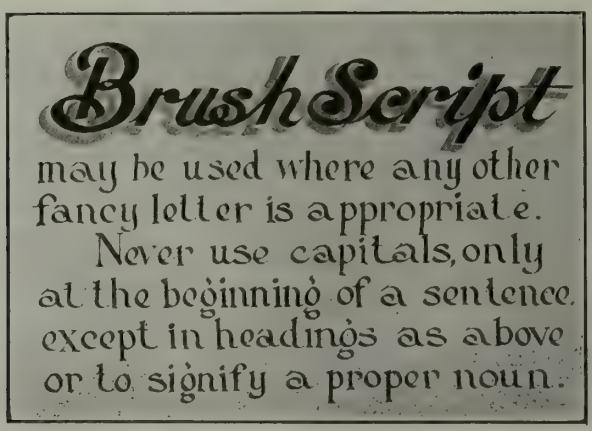
Speed May be Acquired.

With diligent practice, considerable speed may be acquired in lettering with this style of letter. The whole aim is to get a neat flowing letter, all on the same slant. Few people nowadays do not know the proper slant of business-college-taught writing. This letter should be made the same with each letter joined as shown in the accompanying card.

The Combination Card.

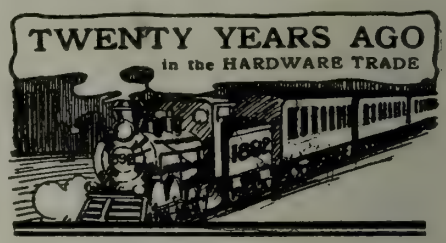
Only light face alphabets should be used in conjunction with the Brush Stroke Script, such as pin lettering, which will be taught in subsequent lessons. Suppose that you associated this letter with a heavy face letter such as Brush Block, the result would be disastrous—simply a black blotch without character, without style. To bring out the main words of a card, use the Brush Script. A fine line letter such as Small Brush Stroke Roman made with small brush or pen, may be used as a reader, giving a pleasing, strong effect.

The card here shown is a combination of these two letters and gives a fair idea of the style obtained by their combined use.



The Brush to Use.

In the execution of this letter, a brush should be used that will give the maximum width of stroke of the capital and which will also draw down to a smaller stroke for the lower case letter. The fine line, of ocurse, is merely an edgewise stroke of the brush. The brush should be held so as to give the correct angle to every line. Keep the card always squarely in front of you when writing. Don't fail in this or the proper angle will not be obtained.



Overloading the Brush.

Some pupils insist that it is difficult for them to get a clear-cut line or stroke. This is due, largely, to the student's carelessness in rubbing out the surplus ink and his fear of the card. Seems funny to say a living being is liable, very liable to be afraid of an inanimate object like a piece of plain white cardboard. Nevertheless, it is true. He is afraid to touch the brush to it, and the sooner a person gets over that fear the sooner a clear straight-edge stroke will be accomplished. Practice making quick sure-stroke lines. Do it quickly but with a dash that will at first seen reckless. Do it first on rough paper then on old cardboard, then on clean white board. Waste a few pieces, but practice. Don't be afraid to practice. Practice this alphabet well and put it into use when you have mastered the following plate No. 14, as the two are inseparable.

For further particulars re brushes, etc., write The Editor of this paper at 143 University Ave., Toronto.

Application of the Brush Stroke Script and harmonizing letter.

The following items were taken from the files of April 30, 1892.

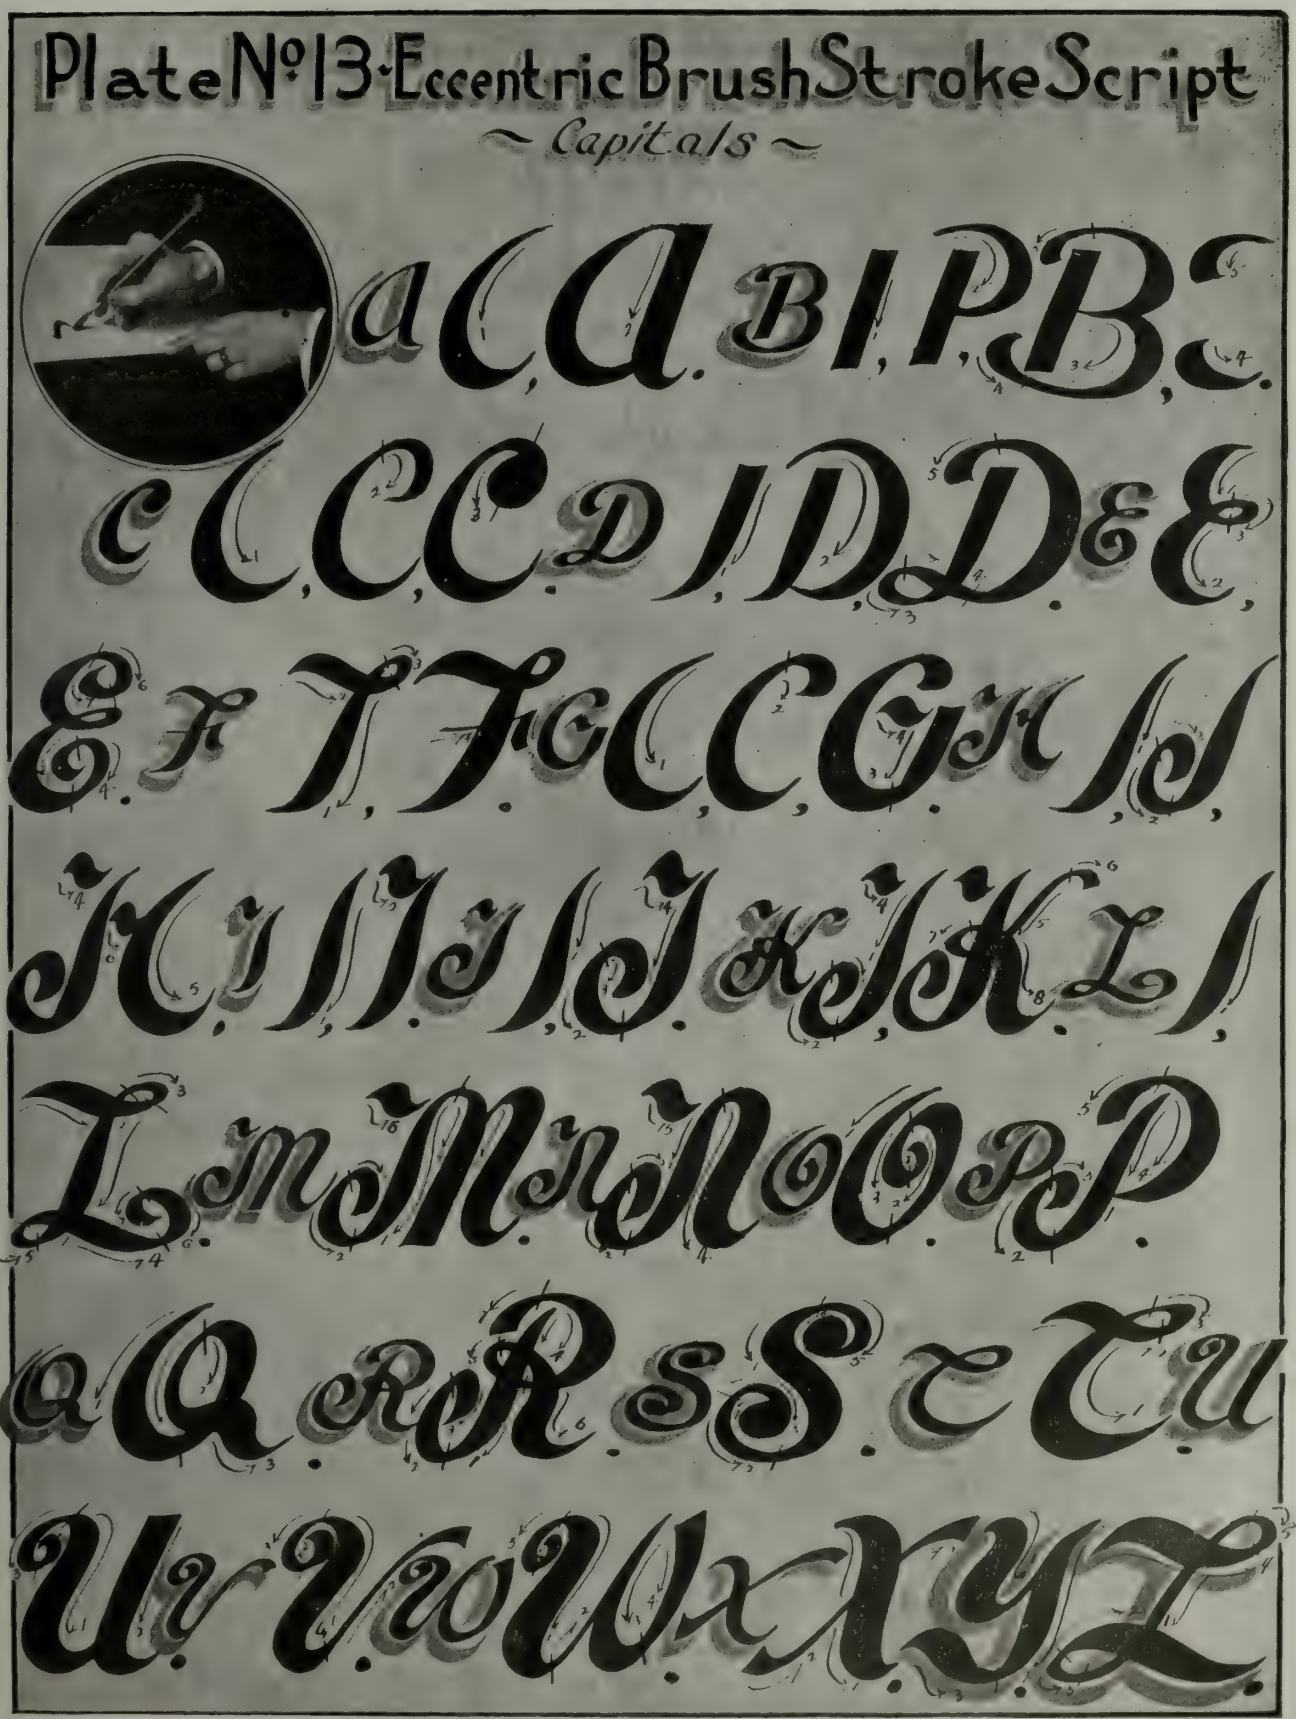
"A deputation consisting of Messrs. Grose and Wright, of Hamilton; Smith, of Belleville, and Van Wagner, of Montreal, waited upon Hon. Messrs. Bowell and Chapleau the other day to urge an increased duty upon tubular lanterns and railway lamps."

TRADE NOTES.

"Robb Bros., hardware merchants, Amherst, Ont., have sold out."

"Foster & Foster, stove and tinware dealers, Belleville, have dissolved partnership, Frank S. Foster continuing."

"Stephen Bros., dealers in paint and oils, Ottawa, have dissolved partnership, William Wallace Stephen continuing."



* * *

"A tramp arrested in London on a charge of carrying firearms has been committed to stand his trial for the burglary of Frank J. Bishop's hardware store in Brantford."

Editor's Note.—The business referred to is still conducted under the firm name of J. Bishop & Son, and is one of the best known in Western Ontario.

Bridgeport Hardware Mfg. Corp.

We thank you for the copy of your Annual Spring Number. We think this is a mighty fine production. We are pleased with it. We should think it would pay you perhaps to get out a number like this twice a year instead of once a year, but we can realize that the cost attached to a volume like this is pretty large but it does you a lot of good, and it is a fine issue.

Arrows indicate direction of brush stroke Practice will soon master this letter.

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 5, Plate 18, shows method of developing the Frustum of a Cone whose top is oblique to its base.

Draw the plan Fig. 1 and divide it off into equal spaces.

Then the full size cone as shown by R.B.D. Fig. 2.

Then the line A.C. showing the angle it is cut off at.

Project vertical lines up from each of the points on Fig. 1, until they touch the base line B.D. of Fig. 2, then carry them towards the centre R. until they touch the inclined line A.C. Then carry them horizontally across to the line R.D. and number them the same as Fig. 1.

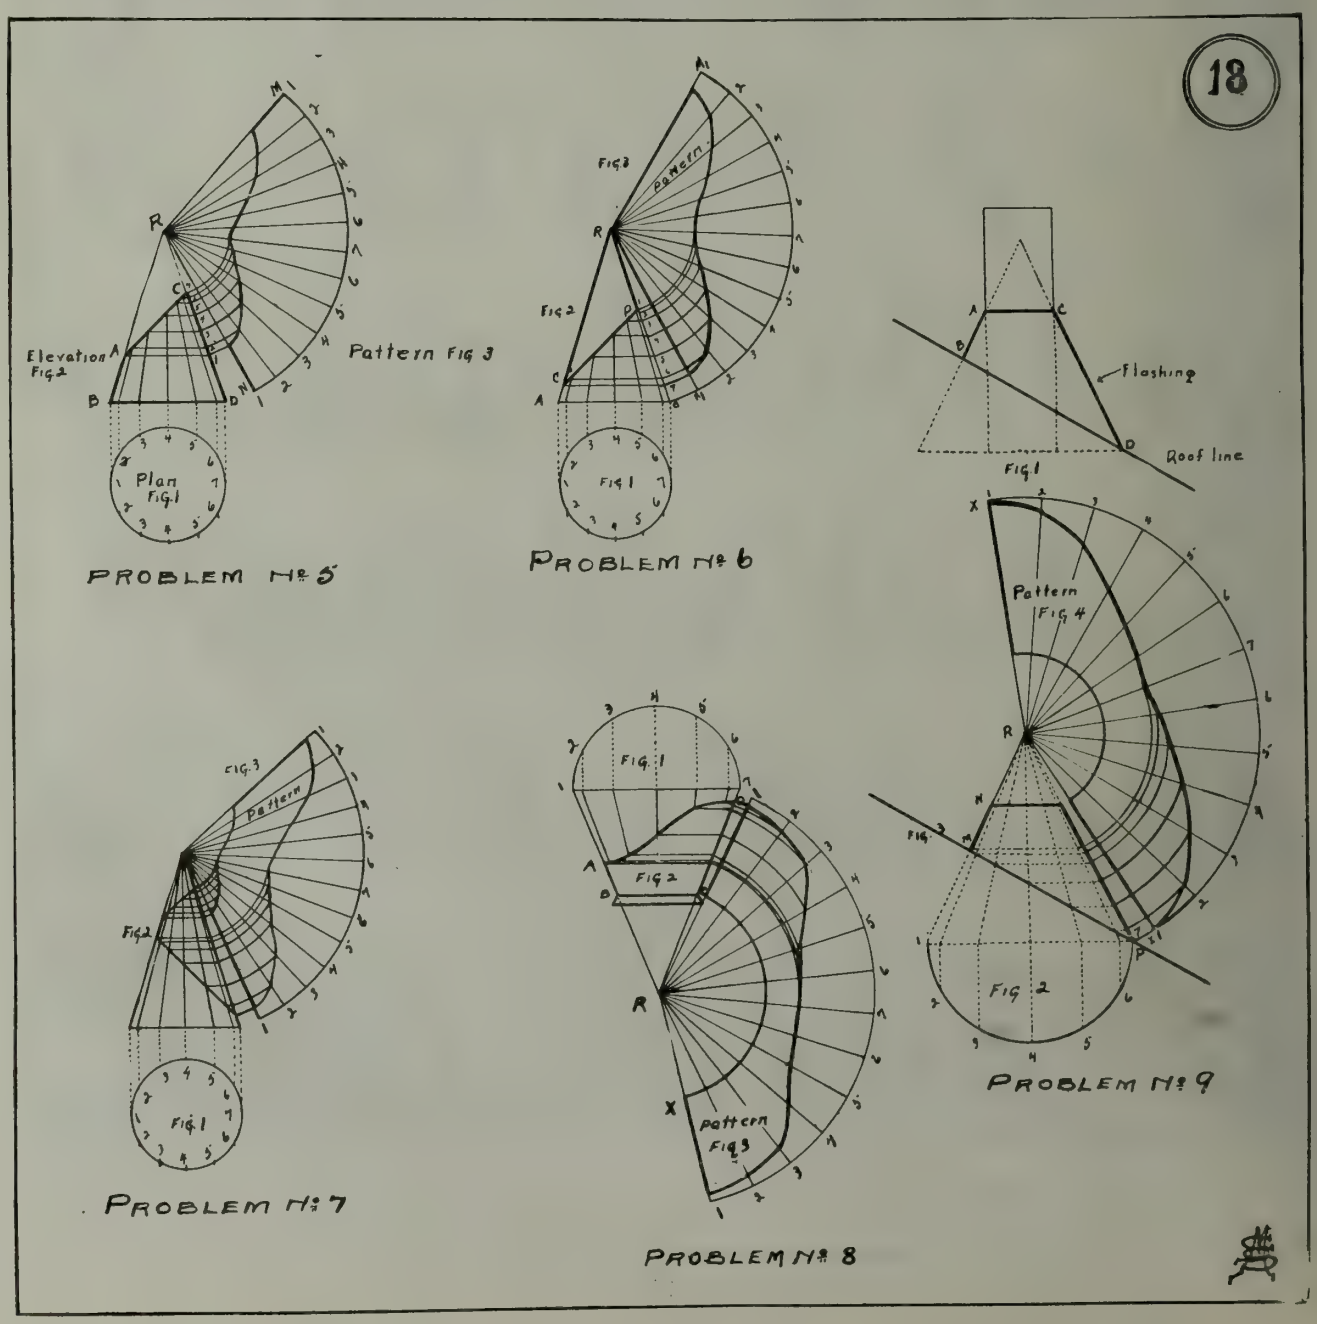
With the point of the compass set at R. and the lead at D. and with R. as the centre, describe the arc N.M. Lay out on this the stretchout of Fig. 1, and draw lines from each number into the centre R.

Then with the point of the compass set at 7, Fig. 2, describe an arc, cutting No. 7 measurement line on Fig. 3. Then bring the lead against No. 6 and cut No. 6 measurement lines, and continue thus until each one of the points on the line R.D., Fig. 2, has been carried out to the measurement line having the corresponding number or position, then a line traced through the points of intersection completes the pattern.

Prob. 6 shows a Cone with its bottom cut oblique to its base.

The method of developing is the same as Prob. 5.

First draw the plan Fig. 1 and space it off. Then draw the Cone R.A.B. Fig. 2 and the Oblique line C.D.



Carry the points from Fig. 1 up to the line A.B. then towards the centre until they touch the oblique line C.D. Then parallel to the base until they touch the line R.B.

With a radius equal to R.B. and R. as a centre, describe the arc N.M. and lay off the stretchout of Fig. 1.

Then with R. as a centre, bring the lead against each one of the points on the line R.B. and swing an arc, cutting the measurement line having the corresponding number or position.

Prob. 7 is a combination of Prob. 5 and 6.

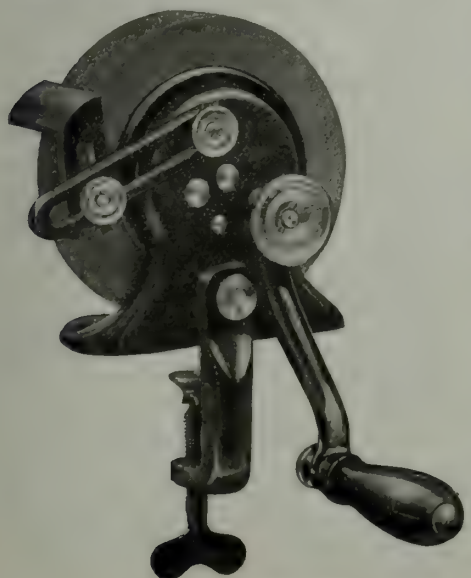
New Hardware Goods

BARN ROOF LIGHT.

The Metallic Roofing Co., Toronto, have put a new skylight on the market which they call the "Acheson Barn Roof Light." The accompanying illustration shows style 6, which is the popular size and style. It is designed to let



Barn Roof Lights.

sunshine and fresh air in and to let air, dust and chaff out. It has many advantages, serving as a ventilator and affording a way to climb onto the roof. In size it is 96 by 33 inches, and the sash raises 26 inches. The curb is solid wood, encased in metal with riveted joints and a strong but simple opening device.

ANOTHER LUTHER GRINDER.

A new machine just put out by the Luther Grinder Mfg. Co., Milwaukee, Wisconsin, is an efficient sharpening machine that can be packed into small space. This new Dimo-Grit Grinder No. 35 incorporates these points in a unique way.

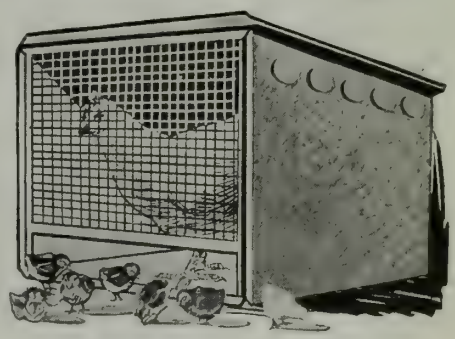
Dimo-Grit Grinder.

All the mechanism of the machine is contained within the wheel itself. The wheel is hollowed out to contain a series of four driving gears and pinions. These produce a speed of twenty revolutions of the grinding wheel to every turn of the handle. All bearings are constructed in one piece, and everything is enclosed and dustproof. The machine is finished in red and black enamel. The wheel is of Dimo-Grit, the new "diamond" substance.

The space required for carrying this grinder is scarcely greater than the wheel itself. The wheel is 5½ inches in diameter, and the entire machine packs in a box 5¾ inches long. All the different parts, including the handle, clamp, tool rest, etc., can be easily and quickly taken apart for packing. Its particular use is to be found with carpenters for their tool chest, for miners, surveyors, prospectors, woodsmen and sportsmen, in fact, for all who have tools to be kept sharp, but who cannot have them in a permanent work shop.

A NEW LETTER BOX.

Something new in the house letter boxes has recently been brought out by the Ajax Hardware Mfg. Co., Military Road, Buffalo, N.Y. It consists of a leter box designed for city use.



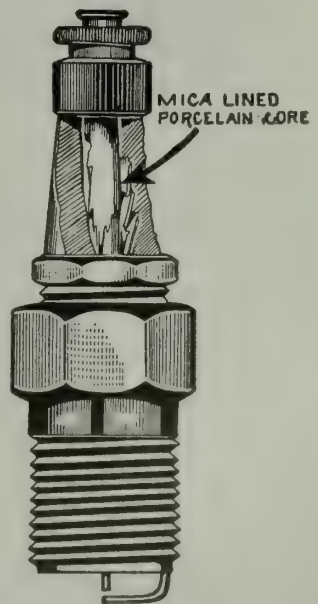
This mail box is equipped with a lock and key. The lock used is a genuine flat keyed lock of a standard make. The box is 10 1-2 inches high, 5 inches wide and 2 1-4 inches thick. It is long enough to hold a full size legal envelope, and its design and construction is such as to permit easy access to its contents.

TRI-ANGLE ALL-METAL CHICKEN COOP.

The Tri-Angle All-Metal Chick Coop is a novelty manufactured by the Tri-Angle Manufacturing Company, Freeport, Ill.

The Tri-Angle all-metal chicken coop has two important features. One is ventilation. On hot nights it is not necessary to close the coop by using the solid metal front. Simply take out the netting front and place it in upside down, and the chickens are safe from rats, weasels, etc., and as cool and comfortable as if in the open air. Another feature is that the top slides back so that the hen and chicks can be easily reached, and it allows the cop to dry out in a few minutes after washing, or after the chicks carry in mud after a rain, thus guaranteeing a dry and healthful place for the chickens.

The coop is made entirely of galvanized iron and weighs but 14 pounds. It folds flat in a small bundle.



Tri-Angle All-Metal Coop.

A NEW STYLE SPARK PLUG.

The Smith Hardware Company, Montreal, is handling a new style of spark plug which will remove some of the automobilist's troubles, and also some of the troubles of the motor boat enthusiast.

The porcelain core has a mica lining, which prevents a break making a short circuit, as often occurs with an ordinary spark plug. This ordinary spark plug, when once broken, must be immediately replaced. The mica lined porcelain core, however, permits the plug working until such time as it may be conveniently replaced.

New Style of Spark Plug.

SEAMLESS TRIPLICATE PAILS.

Seamless triplicate pails of pure aluminum for fireless cookers are now a reality. They are drawn from heavy sheets of pure aluminum—seamless, have self-locking covers and "nest" with an accuracy of fit that shows how carefully

"Ideal" Seamless Triplicate Pails for Fireless Cookers.

the designing was done. Each pail has capacity for two quarts. The three together measure 9 1-2 inches in diameter. The object of these pails is to cook several things at one time in one compartment of a fireless cooker. They will operate in any fireless cooker, and are also splendid for cooking several things at one time over one burner of a gas or oil stove.

Seamless Triplicate Aluminum Pails.

LAUNCH SUPPLIES.

Sault Ste. Marie. — The Cochrane Hardware Co. are to the front with a bid for the launch trade. Recognizing the fact that the boating season is at hand, they are advertising parts and repairs for launches and motor boats. In a series of well-illustrated advertisements they are featuring the following lines:—Line cleats, brass propellers, polished brass side steering wheels, stuffing boxes, whistles, and brass fog horns, spark plugs, sailing lights, anchors, reverse gears, carburettors, tiller ropes, cable, marine paints, and spar varnish.

Fraudulent Marking of Glass

The following statements, given by one who is thoroughly in touch with the glass situation, are worth close consideration. The practice mentioned obtains, it is said, in many countries, although the Belgian manufacturers are now striving to prevent the placing of wrong quality marks.

Editor of Hardware and Metal:—

Those retail hardware dealers who have placed sheet glass import orders will do well to examine carefully the cases and contents of their purchases to see that they are receiving exactly that which they assumed they purchased.

During the winter the qualities 4th and 3rd, as pertaining to 16 oz. glass, have been used by some jobbers interchangeably, and those retail hardware dealers who are desirous of improving the quality of their stock have been given assurances by some importers that they are buying 3rds, when in reality they are buying nothing but 4ths. In many instances last year so-called 3rd quality was imported into Canada under the names of different brands of glass, but the marking "3rds" was omitted entirely from the box. In other instances, where the glass was sold not as any particular brand, but simply as 3rds, 16 oz., these markings were placed upon the cases while lying at the docks at Antwerp, the 4th marks having been erased. It is a notorious fact that during the season of 1911 thousands of cases were re-marked in this way.

This has proceeded to such an extent as to jeopardize the Belgian trade in this country, and the European manufacturers who are combined in a strong syndicate are taking steps to put a stop to this practice. The manufacturers themselves in the past have, to a certain extent, loaned themselves to this deception by reason of the fact that they have sold to the importers large quantities of glass omitting quality marks. The syndicate at the present time are taking steps to prohibit this practice, and to exercise their rights to the fullest extent, upon those engaging in it.

In their endeavor to preserve quality grades of Belgian glass the manufacturer needs the assistance of the retailer, who, in buying a quality such as 3rd, must, on receipt of the cases, not only be satisfied to get the glass, but to note carefully that the cases contain the original markings of the manufacturer, and also note that these markings have not been tampered with, and furthermore that the cases contain these markings, not simply a brand with the quality grade omitted.

In many instances the retailer in placing his import order is desirous of securing and pays an extra price to get 3rds. Unless 3rds are really delivered to him that extra price is simply extra profit to the importer. In other instances the retail buyer intends to buy 4ths, and on receipt of prices he finds that some jobber has quoted him 3rd quality at the same price as 4th quality. The import business is cut down so fine that no margin exists to allow of this, and that dealer quoting 3rds at this price knows full well that bona fide 3rds will never be supplied. To such an extent has this gone that in many instances during the past winter season 3rds quality have been quoted in competition with 4ths at prices which it is imposible to cover the cost of 3rds, to say nothing of any margin of profit.

It is to be hoped that those few importers who have been resorting to these practices will, if not in their own good, at least in the good of the entire trade, abandon such a course which cannot possibly lead to ultimate success.

Manufacturer.

FEATURING WALL PAPERS.

Transcona, Man.—B. C. Higgins, hardware dealer, is featuring his wall paper department. This has developed into an important branch of the business through aggressive management and well-arranged publicity.

Mr. Higgins is now devoting considerable advertising space to his wall paper stock, urging the important part that good wall paper plays in beautifying the home.

The Auto Strop Safety Razor Co., Toronto, have sent out notices that after May 1 extra blades for Auto Strop razors will be supplied only in packages of six and twelve, listing at 50 cents and $1.00 respectively, subject to the various discounts.

Current News of Hardware Trade

Stock Sold.

Ottawa, Ont. — The hardware and stove stock of the Ottawa Hardware Co. has been sold.

Using Motor Truck.

Montreal.—To help in the carrying of their goods, Brandram-Henderson have purchased a Packard three-ton motor truck.

Move to New Quarters.

Montreal.—The Canada Cement Company have moved from the Bank National building to more spacious quarters in the new Herald Building, Craig Street.

Have Moved Office.

Montreal.—Canadian Explosives, Limited, have moved from their old office in the C. P. R. Telegraph Building, 4 Hospital Street, to the new Transportation Building, which is bounded by St. James, St. Francois Xavier and Notre Dame Streets. The Canadian Explosives has secured a suite on the eighth floor.

James Walker Banquet.

Montreal.—The Social Club of the James Walker Hardware Company is an active organization, but never more active than on a recent evening when a banquet was given in honor of the hockey team. A fine repast had been prepared in The Castle Blend Tea Room, but full justice was finally done this and the toast list commenced.

"The Company" was proposed by Andrew Ross and replied to by Max Hill, the managing director.

"The Hockey Team" brought speeches from Messrs. Holden and Hadley. Messrs. Malone and Campbell spoke in connection with the toast to "The Staff;" while to Messrs. Irons and Morin fell the task of doing justice to "The Ladies."

William Hill, of the Yale and Towne Co., New York, was present, and was forced to speak when his company and himself were toasted.

Conditions are Good.

A. L. Woolf, Winnipeg manager for the Ontario Lantern and Lamp Co., has returned to Winnipeg from his spring trip through Alberta, Saskatchewan and Manitoba. Mr. Woolf reports every indication of a trade boom in the West this spring.

R. J. Douglas, of R. C. Jamieson & Co., has been indisposed for several days. He is expected back at the office shortly.

A. W. D. Wheaton, of Maberly, Ontario, was in Montreal on business during the week.

The staff of Lewis Bros., Montreal, are holding a euchre and dance on Friday evening, May 10th.

William Spinney, of Yarmouth, N. S., has been in Montreal this week. He is on a buying trip.

Becomes Montreal Manager.

Montreal.—G. T. H. Platt, second vice-president of the Hobbs Manufacturing Co., for the past four years manager

Geo. T. H. Platt.

of the branch at Winnipeg, has lately assumed the management of the business of the company at Montreal. L. R. Scott, until recently the manager at Montreal, has become treasurer of the company at their head office, at London, Ont. Mr. Platt has met with a wide measure of success in the West, and can be depended upon to conduct the business of the company at Montreal with equal credit.

Building New Store.

Balmoral, Man.—Owing to the steady increase of his business, D. McLaren, hardware dealer, is building a fine new store. It will be 50 by 30, two storeys in height, and with basement. The ground floor will be used for the hardware stock and the second floor will be used for furniture. Mr. McLaren is installing a hoist to carry the furniture to the upper storey.

Business Changes.

Lajord, Sask.—The hardware and implement business belonging to the estate of J. A. Berg, has been sold to H. A. Hanson.

Arcola, Sask.—John R. Mears, hardware dealer, has been succeeded by Wesley A. Youngblind.

Mitchell, Ont.—F. A. Campbell, who has sold out his hardware business to Fred A. Moses, of Cobalt, has conducted his store here most successfully for the last twenty-four years, and is one of the best known hardwaremen in this section. Mr. Moses is now in possession.

Winnipeg.—A. J. Davies & Co. have started in the tinsmithing business in this city.

Dominion City, Man.—D. Phillips, hardware dealer, has sold out to R. Gillespie, of Rainy River, Ont.

Dilkie, Sask.—Billyard Bros. have started in the hardware business here.

Weston, Ontario.—Hugill & Cameron, hardware dealers, have dissolved partnership.

Calgary, Alta.—Maguire & Dixon, hardware dealers, have dissolved partnership. N. E. Dixon will continue the business.

Penhold, Alta.—W. H. Eyre, dealer in hardware, is reported to have sold out.

Strathmore, Alta.—P. G. Owen, hardware dealer. is giving up business.

Mitchell, Ont.—F. A. Campbell. hardwareman, has sold out.

Hedley, B.C.—E. M. Crooker, hardwareman, has sold to Ezra Mills.

Gainsboro', Sask.—J. B. Wilson is selling his hardware stock to Burke & Co.

Creelman, Sask.—M. E. Carruthers has taken over the hardware business of Wright & La Berge.

Shawinigan Falls, Que.—Beauchemin & Trudel have succeeded Beauchemin & Cie. in the hardware business here.

Toronto, Ont.—Oscar Knechtel, hardware dealer, Queen street east, has sold out.

Dominion City. — R. Gillespie, of Rainy River, has re-opened the hardware store lately occupied by D. Phillips. He has put in a new and up-to-date stock.

Woodville, Ont.—V. D. McPherson has been succeeded in the hardware business by Good & McEachern.

Weekly Market Report --- Metals

PRICES TEND UPWARD.

The metal situation shows no developments. The tendency in prices is all upward. Copper has advanced and the price of lead pipe has also been increased. Tin is as strong as ever.

The demand is large. The development of the country is so rapid that the consumption of metals is showing steady increases.

MONTREAL.

Montreal, May 2.—Still the upward movement of metals continues. Tin has advanced rapidly in the past few days. Copper, while it has not risen on the primary market, has necessarily been advanced locally, the old supplies which were secured at a lower market having been exhausted. Spelter is still hard to obtain, and lead has risen somewhat.

The high prices of the metals are causing but little worry, however; what anxiety there is rather results from the shortage of supplies. Yet even this is not worrying the handlers greatly, as ships are now nearing Montreal. A cargo of lead, indeed, is expected to land to-day.

Navigation Opening Brings Rush.

The opening of river navigation is causing great activity locally. Orders have been received from Quebec, to which place ships are already sailing. From other points at which river boats touch orders have come. These may not be filled for a week or so, but shipments will be sent out on the first boats, which will likely sail early next week.

For tin, lead and iron there is a healthy call; while brass and copper are in big demand. None of the stocks are large at the moment, with the single exception of tin.

Tin.—On the primary market the advance has been remarkable, prices now being quoted around the £211 mark. Statistics show that the reserve is smaller than usual, and that the shipments of Straits are also of lesser size. This seems to indicate a firm market, and prices locally are likely to rise rather than fall, although stocks are ample.

½ Cent a Pound Advance.

Copper.—The local rise of 50 cents a cwt. is not the result of any recent advance on the primary market, but is due to the local handlers having sold out the metal which they bought at a better market. To date they have given the retailers the benefit of their early purchases, having raised their figures as little as possible. Stocks, however, are small. Shipments may be expected shortly, but until they arrive some trouble will be experienced in filling orders.

Antimony.—Stocks small, but enough to meet the demand, which is hardly as large now as it was a fortnight ago.

Spelter.—Prices remain steady, but there is a scarcity of the metal locally. This is due to delay in freights. Some February spelter has arrived, but the March purchases are yet to be heard from. As things are at present it is quicker to get spelter from Europe than from East St. Louis.

Lead Pipe Rises.

Lead.—Following the advance in the pig, there has been another advance in lead pipe, the discount upon which—recently reduced from 25 to 22½ per cent. —has now been further reduced to 20 per cent. Wiping, formerly quoted at 23c, has been advanced to 23½.

A cargo of 80 tons is expected to reach port to-day. Much of this has been already sold, but there will be a large enough quantity left to fill all immediate orders.

Iron.—There is no great supply of this metal on hand. Some cargoes are on the way, but unless they arrive shortly it may be found necessary to advance the price.

TORONTO.

Toronto, May 2.—The situation in metals has not altered. That is, the upward tendency is as marked as ever, and there is continued scarcity in many lines.

The situation has one good feature. Metal men are too busy attending to the orders which are pouring in on them, to do any worrying. They recognize that prices are higher in some metals than they care perhaps to see, but the orders continue to come in, so it is taken for granted that the firmness in prices is not retarding trade one iota. There is, in addition, the assurance of continued activity, for stocks are said to be very light.

The one feature which is really causing some worry is the slowness shown by the railroads in handling freight traffic. Exasperating delays have occurred, both in receiving and shipping. The freight congestion has helped to make even more marked the scarcity which exists in some metals.

Tin.—There is continued strength in tin. While prices have not been changed locally, there is more of a tendency shown to quote the higher figures noted last week. There is a heavy demand, and it seems reasonable to assume that tin will hold around the 50 mark for some time to come.

The growth in tin consumption is really striking. Statistics show that the American deliveries for April were 5,400 tons, or 300 tons more than any previous month in the history of the trade; some 1,700 tons more than the average monthly deliveries during each of the years 1911, 1910, 1909, and 2,500 tons larger, or nearly double the monthly average deliveries of 1908 and 1907.

An Advance in Copper.

Copper.—Copper continues on the upward path and an advance of ½ cent has been made here. The price is now pretty high, and metal men are divided in their views as to whether the metal will advance beyond the present figure or not. Certainly, however, the present price is being firmly maintained, and the demand continues so strong that there is absolutely no reason to expect the price to recede.

Lead.—The tendency in lead has been toward higher prices, though no change has been made here yet. Quotations are all firm. There is a large demand and stocks are said to be lower than is deemed advisable. While not as difficult to obtain as some other metals, lead has not been forthcoming in large supplies.

An advance has been made in lead pipe, the discount being cut to 20 per cent.

Spelter. — The situation here is but little improved. There is little spelter in sight, although speedy relief is anticipated.

Plates and Sheets.—The firm tendency noted in plates and sheets has been maintained. There is a splendid demand, and the stocks are, on the whole, quite satisfactory.

APPRECIATES LETTER BOX.

Editor Hardware and Metal,—"I must thank you for the trouble you have taken to give me the correct information about squaring hand shears.

"Every time I have had to enquire for some special goods, you have always looked into the matter carefully and your information is always useful to me."

"E. BOUCHER."

Weekly Market Report --- Hardware

ADVANCES RECORDED.

The week has been featured by important price changes. All brass goods — bibbcocks and valves, sleigh bells, etc. — have been put up about 10 per cent. in price. Cotton goods, clotheslines and sash cords have advanced in a like degree. Another increase has been made in lead pipe, 2½ per cent. having been clipped off the discount.

Business has been exceptionally brisk in all sections.

MONTREAL.

Montreal, May 2.—More price changes are reported this week; none of great importance, yet the lower figure asked for one line of goods will mean that the retailer will be able to find a readier sale for the various models; and the increase in other articles is of some moment since it indicates what may be expected in the future.

Thermos bottles may be purchased which have dropped in price. Various causes are given, but it would appear that German competition is making a lower price level seem necessary. New Thermos bottles can be purchased by the retailer as low as $1.15, while $1.75 used to be about the rock bottom price.

Brass Going Up.

Brass goods generally have moved upward. This rise was predicted some time ago, the steady advance in coppermaking an upward revision seem a certainty. As yet builders' hardware lines have not been advanced, but it is expected that higher figures will be set before long. Dealers who are selling builders' hardware in good quantities might do well by buying fairly largely at the present time.

Cotton clothes lines and rope have also been advanced ten per cent., and there has been an upward movement in sash cord.

Generally business has been exceedingly good. Evidently the retailers are having a heavy call for spring lines, for they are urging the jobbers to give them prompt delivery of these goods. Sporting goods continue to move well, the opening of the trout season having been followed by a heavy demand for tackle.

Heavy Spring Buying.

Spring Goods.—These lines are being ordered largely. The demand now has become general, and the retail sales must be large since supplementary orders are pouring in. Garden tools are especially wanted, but lawn mowers, hose and similar lines are being bought largely.

Builders' Hardware. — Some of the factories are said to be somewhat slow in making deliveries, a fact which is explained by the large orders received. The purchase of these lines has now started in earnest. With the probability of an advance, it is likely that the demand will become even heavier in the coming week.

Tools, are moving briskly. Carpenters and other workmen are now busy upon outside work. They need new tools to complete their kits, and are buying in such good quantities that the retailers are demanding fresh supplies.

Various Lines Advanced.

Brass goods, as has been said, have moved up about 10 per cent. in price. Cupboard and drawer locks, and all English brass foundry material such as catches, knobs, and brass cocks are among the articles advanced. Compression bibbs too, are quoted 10 per cent. higher than a week ago.

Other lines of builders' hardware have not increased in price as yet, but the rise seems imminent.

Kitchenware.—Though tin continues to soar there has been no further rise in tinware, nor is there likely to be an advance for some little time. If the high price of the pig continues an advance will be made eventually, but hardly until business conditions improve across the border.

Rope Up Half Cent a Pound.

Cotton rope, and cotton clothes lines have been advanced 10 per cent., while sash cord has gone up ½ cent a pound.

Sporting Goods. — Here the warm weather is causing a great improvement in orders. The demand for baseball goods, lacrosse sticks, golf clubs, and fishing tackle has increased by leaps. Supplementary orders are now being received, which indicates clearly that the retailer is having little trouble in disposing of the goods.

TORONTO.

Toronto, May 2.—The past week has seen a number of important changes in price. Brass and copper goods have gone up and an advance has also been made in cotton goods.

In these lines there has been a steady upward tendency for some time past. The high price of metals is the primary cause.

To counterbalance this upward trend, steel goods have shown an easier tone since the first of the year. Stamped goods in quite a few lines are selling from 5 to 10 per cent. less than at this time last year. Thus the market is, on the whole, pretty well evened up, although all talk at the present time is of advances.

Business is extremely good. The local jobbing houses are handling a large volume of business, and shipments have been heavy; so heavy, in fact, that the railways are not making deliveries with any degree of promptitude. Many complaints are heard on that score.

Brass Goods Up.

The most important advance is with regard to brass goods. A general 10 per cent. increase has been declared on such lines as sleigh bells, bibb cocks and valves, builders' hardware into which copper and brass enter, and similar lines. This is due to the advance in copper and has been expected for some time. It is noted, however, that brass goods in Europe are not advancing. European trade conditions are always more steady and advances are not often made. It is said that the European manufacturers of brass tacks and similar lines laid in large supplies of copper before the advances in the price of that metal began.

Cotton Goods Up.

A 10 per cent. advance has been declared on cotton clothes lines and cords. Sash cord has advanced ½ cent a pound. These increases are not due to any recent development or shortage in cotton, but rather to a tendency for the market to right itself. Prices have been abnormally low, and the increases put into effect will tend to bring the scale up to a more fair basis.

A further increases has been declared in lead pipe, 2½ per cent. having been cut off the discount, making it 20 per cent.

Seasonable Goods.—There is a steady call for rakes, spades, hose, lawn mowers, sprinklers, wire netting and other goods of a similar nature. While most dealers stocked up in spring goods some time ago, plenty of sorting orders are now being received.

Household Goods.—There is a heavy trade being waged in graniteware, tinware and all household articles. Refrigerators are now in demand and some large orders are being filled.

Builders' Hardware.—Although business has been good right along, there was a marked stimulation this week. Orders became larger and heavier. It is quite apparent that the effect of the extensive building operations is making itself felt on the retail trade.

Sporting Goods.—Business is now at its briskest point. Jobbers state that they are doing more business than ever before in most lines. There has been an unusually heavy call for canvas gloves and mitts. Camping supplies are starting to move already. Baseball, lacrosse and tennis supplies are in splendid demand.

Weekly Western Market Report

Substantial Reductions in Canada Plates—Lead Pipe and Waste Advances—Price of Screws Adjusted—Market Quiet, But Trade is Reported to be Satisfactory.

Winnipeg, May 1.—With the filling of spring orders completed, there has been a somewhat quieter time in the wholesale hardware business here, but a sharp revival of activity is certain as soon as seeding is finished.

The weather has so far been very favorable to getting in the crop, and the area in wheat will be little if any short of last year's acreage.

The building season is now in full swing in Winnipeg and other towns, and the retail trade in tools and staple lines of builders' ware has been exceptionally good.

Building permits in Winnipeg already reach $4,500,000, almost the amount of first four months of 1911.

Prices are steady. There has been a sharp decline in Canada plates, and a rise of 10 cents on lead pipe and lead waste. Prices of screws have been adjusted. No sweeping changes are probable until the opening of navigation.

Collections are reported slow, but improving.

Winnipeg Hardware Quotations.

Ax Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.95; p.g. oak, $2.90.

Augur Bits—"Irwin" bits, 47½; other lines 70 and 10 per cent.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3; small lots, 2½; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.25; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $15.

Blocks—Steel, 50 per cent.; wood, 60 per cent.

Cut Nails—$3.15 per keg base.

Wire nails, base, $2.80 Winnipeg; $2.35 Fort William.

Copper—Sheet and planished copper, 30c per lb. Tinned, 24c. Copper wire, 3-inch gage, 24c, to 20-inch gage, 29c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corrugated iron, 28 gauge, $3.87; 26 gauge, $4.18; pressed standing seamed roofing, 28, painted, $2.84; 26, $3.24.

Canada Plates.—Lower. Lead polish, 6 and 7-inch, $3.40; 8-inch, $3.65; full polish, 6 and 7-inch, $4.25; 8-inch, $4.50.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 5; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron—Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 6, $4.20; 28, $4.60; 30 gauge or 10¾ oz., $4.80; Queen's Head, 20, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Iron Pipe—⅜ in., $3.25; ½ in., $4.05; ¾ in., $5.00; 1 in., $7.20; 1¼ in., $9.80; 1½ in., $11.80; 2 in., $15.30.

Galvanized Ware.—37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.90; No. 2 and larger, $4.65; snowshoes, No. 0 to No. 1, $5.15; No. 2 and larger, $4.90; steel No. 0 to 1, $5.35; No. 2 and larger, $5.10; featherweight, $6.50.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $2.75; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50, 5 and 5 per cent.

Hinges—Light T and strap, 65 per cent.

Hooks—Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 40 per cent.; smaller lots, 35 per cent.

Iron Pipe, Black—⅛ in., $3.15; ¼ in., $2.30; ⅜ in., $2.35; ½ in., $3.15; ¾ in., $3.80; 1 in., $5.45; 1¼ in., $7.45; 1½ in., $8.95; 2 in., $11.55; 2½ in., $18.40; 3 in., $24.15; 3½ in., $32.25; 4 in., $36.75; 4½ in., $42.50; 5 in., $47.50; 6 in., $61.50; 7 in., $95.50; 8 in., $118.

Logging Chain—¼ in., $7.50; 5-16 in., $6; ⅜ in., $5.50.

Pig Lead.—$4.75. Lead Pipe—$5.85.

Lead Waste—$6.85.

Rivets and Burrs—Iron rivets, 55 per cent.; copper, No. 8, 30c; 10, 32c; 12, 34c; copper burrs, No. 8, 40c; 13, 43c; 12, 46; copper rivets and burrs, No. 8, 31c; 9, 32c; 10, 33c; coppered, No. 8, 17c; 9, 17½c; 10, 18c.

Rope — Sisal, 8¾; Pure Manilla, 10¾c; British Manilia, 9c; lath yard, 9¼c.

Staples.—Bright wire, $2.50 F.O.B. Fort William; $2.90, Winnipeg.

Steel Squares—40 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 6 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—Half and half, $28 per cwt.

Screws.—Flat head iron, 87½ and 10; brass, 77½ and 10; round head iron, 82½ and 10; brass, 72½ and 10; coach, 87½ per cent.

Staples—Bright wire per cwt., $2.50 at Fort William, $2.90, Winnipeg.

A STRONGER TONE.

Cleveland, O., May 2. — The Iron Trade Review to-day says—

There has been a gradual absorption of inactive capacity in most lines of finished and semi-finished steel, with a consequent stronger tone to prices, during the past week. Independent producers of billets and sheet bars have taken the lead in advancing prices, being forced to such action by rapidly increasing consumption and limited supply. Pig iron buying has shown signs of increasing activity. Some important inquiries are out for basic and recent sales show no signs of weakening prices. The shortage of furnace coke is continuing in spite of favorable weather and labor conditions and prices are remarkably firm at higher levels. Some improvement is noted in the demand for light rails. Car buying by railroads has filled plate mills with business for some months ahead and is causing talk of a further advance in prices on this product. Pipe buying is active, but there is talk of severe competition in steel line pipe and oil country goods that is holding prices in check for the present. Merchant pipe is strong and prices firm.

COMPLETE COURSE IN SHEET METAL WORK.

(Continued from page 44)

The student will now readily see, that in drawing the patterns for cone-shaped articles it is only necessary to draw one-half of the plan, as twice this space can be set off on the stretchout; in fact, where space does not permit and both sides of the article are the same, it is only necessary to draw one-half of the pattern on paper, as twice the pattern can be laid off on the metal.

Methods of Retailing Paints and Varnishes

Connection Between Advertising and Paint

An Address by L. R. Greene Before the Montreal Publicity Association —He Tells How the Sales Can be Improved by Giving Due Publicity to the Paint Stock.

Some interesting hints upon advertising—hints which will be of value to retailers as to others—were given on Tuesday night, when L. R. Greene, Advertising Manager of the Sherwin-Williams Company of Canada, spoke before the Montreal Publicity Association.

Mr. Greene explained in starting one of his first experiences in advertising. He was working in Hamilton at the time, and a young lady of his acquaintance lost a hatpin. The method then generally accepted of locating lost articles was to put a notice in the Post Office—the place where most people gathered. This scheme the young lady tried, but without avail.

"Why don't you put an ad. in the paper?" asked Mr. Greene.

The young lady took his advice, and the very night after the ad. appeared, the pin was found in a pin cushion in the girl's room.

"That showed me right away," smiled Mr. Greene, "that advertising brings results."

Co-operation Essential.

Before the assembly of advertising specialists Mr. Greene made no attempt to theorize, but rather outlined principles as he had seen them employed, and as he had employed them. He spoke of the need of connecting the advertising with the sales department. Only by doing this can the best results possibly be obtained, and only by arranging for this co-operation can a great deal of waste be prevented.

In his company, Mr. Greene explained, there are three departments which work together—the one helping the other. First there is the advertising department, in which the advertising matter—the color cards and booklets—are prepared. Then there is the promotion department, which aims to promote new business; and lastly, there is the sales department. The promotion department acts as the link between the advertising department and the sales force. It receives the requests of the travellers, decides where advertising matter may best be sent, and starts the work of educating new dealers.

Mr. Greene spoke of the annual convention of the travellers and the advertising staff. This, he declared, has been of great value. Points which have appealed to the salesmen are there brought up. Suggestions are received as to the best time of advertising certain lines. The travellers are given some ideas of the time at which the various classes of advertising are to be sent out. Thus they go to their customers with a real lever. They can say, "Now, Mr. Blank, in May we are going to be advertising mixed paint in all parts of the country. That will be a great time for you to make a good display." Thus a good order can usually be secured, for the dealer will naturally be anxious to get the benefit of the extensive advertising.

Where the Dealer Comes In.

The traveller also can tell his customers at what season form letters will be ready. Thus the progressive dealer will have time to prepare for these. He can determine to whom he would like these letters sent, and can arrange a display which will carry along the advertising work started by the manufacturers.

Through the co-operation of the traveller, Mr. Greene also pointed out, a saving can be made in the amount of advertising assistance sent. The traveller recommends what color cards, and what posters should be sent. He knows the use that the dealer is making of them—and follows the old biblical rule, he secures most help for those who most help themselves.

"We find it better," stated Mr. Greene, "not to send a dealer too many helps at a time. If he gets a great pile they are likely to be lightly regarded, and to be given a place of retirement behind the counter. If, on the other hand, the helps are sent out a few at a time, but at frequent intervals, more thought is put on the uses to be made of them. The results therefore are better, both to the manufacturer and the retailer.

Early Opposition.

Mr. Greene spoke of the opposition which some of the old travellers had at first shown to the promotion department. They seemed to think that the

A splendid display of paints and accessories in the store window of Geo. Mathewson, Queen Street east, Toronto.

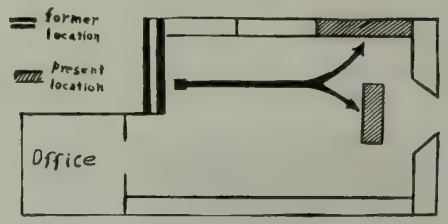
work of opening up new territory, and of securing new accounts, was for them alone. But soon the folly of this position was acknowledged, the travellers seeing that the promotion department was helping them, and that they were helping themselves by helping it. An instance was given. From a new customer there came an order for $200 worth of paint. This was the result of the promotion department's work. The order was not at once filled, but from the promotion department went a message to the dealer, advising him of the receipt of the letter, but saying that Mr. So and So, the company's representative, was in the district, and had been asked to call. The traveller did call. He assisted the dealer, explained the advertising help which would be given him, and instead of a $200 order he secured one for $400, all new business.

The discussion which followed Mr. Greene's address was of greater interest even than usual, and of especial interest to paint men.

Objection to Mixed Paints.

A member asked Mr. Greene why it is that certain painters seem to object to working with ready mixed paint. He said he had recently had his house painted, and when making the bargain with the painter, had asked that a certain ready mixed paint be used. "I'll use that if you like," the painter had replied, "but I won't guarantee the work."

"Painters like to mix their own paint," said Mr. Greene. "By this means they think they can effect a saving. Paints turned out by a good concern are blended scientifically, and are made of the very best material. It stands to reason," he urged, "that they should be better than the paint mixed in a haphazard way by the average painter."



The Reward for Moving Paint Forward

Ten Dollars a Foot Was the Ratio of Gain of a Toronto Dealer —Why Paint Must be Given a Prominent Place in Store, if Big Sales are Desired.

One of the first essentials in conducting a paint department in the spring season is to place the stock in a prominent position. During the winter paint is given a rear position in the large majority of stores. As soon as spring arrives, it should be moved up. If allowed to remain at the back of the store, the paint will not sell as briskly as it should at this season of the year.

The experience of a Toronto dealer—whose name, by request, will not be mentioned—is worth quoting in this connection. Last spring, for the first time, he came to the conslusion that it would pay him to feature his paint stock. This conclusion was reached by reason of the building activity going on in the section where his store was located. "All these buildings will need paint," the dealer told himself, "so I might as well let them know I am selling paint."

He moved his stock up to the front of the store where it was quite prominent. Formerly it had occupied a row of inconspicuous shelves at the rear. The new location included a row of sgelves at the front on the right hand side of the entrance and a silent salesman directly fronting the door. The showcase was used for the display of brushes, glass cutters and articles of that nature. On the top varnishes and paint specialties in liberal assortment were arranged.

Showing change in position of paint department which brought gain in business.

The change was a striking one. Whereas, formerly the store, to a casual observer, showed no evidences of paint whatever, after the change the paint stock was the first to greet the eye of the incoming customer. It could not be lost sight of for a moment.

The dealer did not bestir himself in any other direction, except to put in an occasional window display of paints, but the effect on his sales was almost magical. During the months of April, May and June, his sales aggregated $300 more than during the same three months of the year before.

"I just moved the stock forward thirty feet," commented the dealer. "Ten dollars a foot is pretty good pay."

In order to make the change, he had displaced some household lines, moving it back to the place formerly occupied by the paint. His sales in the goods displaced did not suffer one iota, however. The change brought a clear gain.

Why it Pays.

It is not hard to understand why giving, if the matter were presented to the importance of the matter; on the contrary by his own inpays. Many people—a majority of people, perhaps—have not yet come to look upon paint as a necessity. Their homes may need paint badly and yet the fact may go unnoticed for years even. They would recognize the necessity of painting, if the matter were presented to them in the right light. The trouble is that they never give the matter any thought, whatever.

It will thus be seen that the dealer who keeps his paint stock in the rear, where it is seldom seen, very directly contributes toward the carelessness which people show on the subject of paint. He does nothing to bring his customers to a realization of the matter; on the contrary, by his own indifference, he helps to confirm them in theirs. There is nothing in the store to keep recalling paint and its possibilities to them.

But when the dealer arranges his stock to give prominence to paint, the effect is directly opposite. People see paint every time they enter the store. They must unconsciously give some thought to it; some connection in their thoughts will inevitably be established between the paint stock in Jones' hardware store and the dilapidated, unkempt appearance of the front verandah at home. That connection of ideas is bound to come in time. If the dealer does anything to foster it. If he puts in an admonitory word now and then, explaining the good results which can be obtained at a small cost, the chances of making a sale are large.

That is how it works. That is why the dealer, quoted above, cleared $10 for every foot forward that he moved his paint department.

J. H. Lauer Resigns.

Montreal.—J. H. Lauer, for seven years secretary-treasurer and manager of the Montreal Builders' Exchange, has resigned. He has been offered the management of a mercantile concern which Mr. Lauer does not think he should refuse. His place will be hard to fill.

Appointed Agent.

Montreal. — William H. Evans has been appointed sole agent for Messrs. Wilckes, Martin, Wilckes Company ,of New York, makers of fine lampblack.

Mr. Evans has taken an office in the Commercial Union Bldg., St. James Street, Montreal.

There's Money in the ML Line

ML goods are made to build up trade for our dealers and ourselves. They have to be good, and they are good because we've been in business for 20 years—long enough to know that the way to succeed is to give full honest value for every dollar's worth we sell.

M L PAINTS

Under weather tests ML Paints have stood up better than the many "best" paints in the market. You can surely get particular trade with ML Paints.

M L FLOORGLAZE

A quick drying, glossy, wear-resisting finish—good for any paint purpose. In solid and transparent effects. Many shades. Well advertised.

ELASTILITE VARNISH

A favorite with folk who know that quality pays though it seems to cost more at first. Elastilite is splendid for any varnish need, indoors or out.

DECORATIVE AID DEPARTMENT---A Help for Every Decorator and Dealer. Color schemes, and technical information given, by which any dealer may sell exactly the right paints in the right shades to properly decorate any house. Stencil designs, etc., included in information. This plan helps you get more business. Services are free. Write for Decorative Aid Booklet.

Many other good members in the ML Line. Get price list, color cards and samples soon, from

Imperial Varnish and Color Company, Limited, Toronto

6-24 Morse St., Toronto 108 Princess St., Winnipeg 365 Water St., Vancouver

MAGNETS

TALK NO. 3---FULL VALUE

The most powerful of magnets is value—full value. Continuous patronage is attracted only by magnetic value. Forceful advertising will get new customers, but it takes "full value received" to hold them.

Full value in paint means efficiency, serviceability and economy by use of the paint—the working and hiding quality, covering capacity and durability.

Lowe Brothers "High Standard" Liquid Paint

"The Paint of Proven Performance" represents the maximum of magnetic power. Its successful sale is promoted by magnetic advertising and sustained by magnetic value. The first magnet draws custom—the second magnet keeps custom.

The magnetic features of Lowe Brothers' Agency will build business for dealer agents, just as the sun's magnetic rays lifts water to the clouds.

Think it over—then write us.

Weekly Market Report --- Paints

A HEALTHY BOOM.

Phenomenal advances in the demand for paint are reported from all sections. Manufacturers now speak as though assured of the largest year in the history of the country. Certainly, the demand at the present time is sufficiently large to tax the capacity of the various firms.

A firm tendency is noted in prices. Turpentine and oil have advanced, and there is still much talk of an advance in white lead, the latter contingency being expected any day now.

MONTREAL.

Montreal, May 2.—With manufacturers runing their plants Saturday afternoons and evenings; with undelivered orders piling up in the offices; with demands for exceptionally large quantities of a certain class of article being answered by intimations that owing to the unprecedented demand immediate shipment of the whole quantity cannot be guaranteed; it becomes very evident that the paint business is booming.

But the word boom has been abused of late. The paint industry is not making any sudden spurt which will soon die out. It has rather gathered more speed, and all signs point to the likelihood of there being a still further increase, rather than a decrease, in the coming months.

Exceptional Advances.

1912 to date has been an exceptional year. One firm reports that the volume of business done during the first four months is greatly in excess of that done during the same period in 1911—thousands of dollars in excess. The same satisfactory conditions are reported by other manufacturers. The only trouble, at the present time, indeed, is to turn out goods fast enough—that and to get supplies of raw materials.

There seems no keeping up with the orders. Such is the report from all sides. The retailers are going about their selling in the right way. They are getting the business, as is shown, not only by their own statements, but also by the word of the manufacturers who have many supplementary orders to substantiate their words.

Trouble With Cartage.

The cartage problem is causing some trouble. May 1 is moving day in Montreal. Drays are at a premium. This makes it just a little harder for the manufacturers to get their goods to the railways.

But the general healthy state of business causes such minor troubles to be regarded lightly. To the retailers, however, these delays are serious, for the stocks on their shelves decrease rapidly. The retailers, however, are themselves to blame to some extent. They should have placed their orders earlier.

No price changes are quoted, though there is a tendency to charge a higher price for linseed. White lead, too, seems about to advance.

Turpentine.—There is little to report here. Supplies are fair, and still sales are being made at 70c.

Advance in Lead Coming.

White Lead.—With pig going up steadily, the coming of an advance in white lead seems only a question of time. When this higher figure will be struck is somewhat of a question, but probabilities are that in two weeks an advance of 10c a cwt. will be announced. Orders, it would seem, might well be placed now. The dealer has nothing to lose and there is a good possibility of effecting a substantial saving.

Trouble With Delivery.

Mixed Paint.—Here the orders are piling in. Stocks are low, for the goods are being taken to the railways, almost as soon as made. To facilitate prompt shipment manufacturers are having carts left in the yard, and loaded during the night so that they can be drawn away first thing in the morning. But even with such schemes as this it is impossible to keep up with the orders. Paint is being used all over the Dominion, and there is litle rest for the makers.

—

TORONTO.

Toronto, May 2.—There has been a heavy demand for all lines. Business in paint has continued just as brisk as ever. Dealers are sending in repeat orders now for large bulk, showing that the demand on the part of the bulk has attained to full spring proportions. There is a marked stimulus in the call for oil and turpentine. Outside painting is now heavy. Oil and turpentine have responded to outside conditions and advanced slightly in price.

Oil is Higher.

Linseed Oil.—There has been a 2 cent advance in linseed oil, making local quotations 98 cents for raw and $1.01 for boiled. Everything tends to continued firmness in the price of oil. It is stated that there have been further advances in Great Britain, and that the market price there is relatively higher than the quotations prevailing here. In addition, the Canadian crushers find the price of flaxseed in the north-west firmly maintained. As the bulk of the seed for the year has reached the market, there does not seem to be any possibility of decline, so the price of linseed oil will be firm for some months to come.

"Turps" Also Firmer.

Turpentine has been doing a little fluctuating lately. Late last week a tentative decline to 68 cents was registered, some houses quoting one cent less than that. Then word came of a sharp advance at Savannah and Jacksonville, where prices have gone up about 5 cents per gallon, wine measure, which would mean an advance in Canada of 6 cents per gallon, imperial measure. Jobbers were compelled, accordingly, to advance the price here They have put the selling price at 70 cents, and, as this does not by any means cover the advance in the laid-down cost, a further increase would not cause any surprise. An operator in turpentine, in the State of Georgia, writing to the trade journal there, says that the producers of turpentine have already lost one dipping on the best timber in Georgia for the year, and he claims that this timber on which the loss of one-third or more of the total product of gum is usually taken, has made a very great reduction in the total amount of turpentine produced this year. The writer also claims that there has been a lot of timber blown down by storms, which is another material factor in the reduction of the quantity produced. Labor conditions are also said to be making trouble, so that the producers of turpentine under present prices are very much discouraged with the year's outlook unless prices are further advanced.

White Lead Firm.

White Lead.—Prices still remain the same, but local jobbers state that they expect an "upward revision" any day. There is a first-class demand for this season of the year.

Glass.—The glass trade is rather quiet and considerably unsettled. Some uncertainty exists as to future prices, and in the meantime there is no particular desire to sell manifested.

Putty.—The demand continues very active for this season. Prices are as follows:—Standard bulk in casks, $2.20; in 100-lb. drums, $2.40; in 25-lb. drums, $2.50; bladder, in barrels, $2.65. Pure putty prices are as follows:—Bulk, in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder, in barrels, $3.

Quebec, Feb. 4th, 1910.

Messrs. Brandram-Henderson, Limited,
Montreal.

Gentlemen :—We, the undersigned, declare that we have used **Brandram's B.B. Genuine White Lead** for a great number of years.

We used this White Lead in the painting of at least sixty churches, among which are the Basilic of Quebec, and the Basilic of Ste. Anne de Beaupré, and it has always proven entirely satisfactory.

There is no White Lead that can come up to the standard of this brand.

Yours truly,

LA COMPAGNIE GAUTHIER & FRERE,
Per JOS. GAUTHIER.

IF you would have a Busy and Prosperous Store, give special thought and study to the development of each department.

The Paint department is one that should be an excellent profit producer. To make it such sell a good clean cut stock, of quality goods, supported by the manufacturers co-operation, i.e., the Common Sense kind that brings trade to your store. **Minerva Paint Products** and the Pinchin-Johnson Company's co-operative selling plan lead the way to bigger business and better dividends from your Paint Department.

It is not fair to your business to neglect investigating the **Minerva** Proposition.

PINCHIN-JOHNSON & CO. (Canada), Limited
377-387 Carlaw Avenue, Toronto

K 70

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and be ready for spring. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

A PAYING LINE

yet one that is often overlooked by dealers is

ROOF PAINT

a good one makes many friends and also good profits for the dealer, and among the good ones there is none better than

JAMIESON'S

When used on Roofs, Barns, Fences, etc., it gives splendid results; equal, in fact, to those obtained with many so-called "Pure Paints."

It is made from materials specially adapted for outside wear, in eight colors, as well as white—and it is cheap.

DON'T OVERLOOK IT!

Paint and Varnish Removers

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish in Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	NAME OF BRAND
The Sherwin-Williams Co., Montreal, Canada	"Taxite"
International Varnish Co., Ltd., Toronto Canada	"Klensa"
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	"Expedite"
British American Paint Co., Victoria, B.C.	"Bapoo"
Mount Royal Color and Varnish Co., Montreal, Canada	"Scrape-off"
James Robertson Co., Ltd., Toronto, Canada	Robertson's Paint and Varnish Remover"
Sanderson Pearcy Co., Ltd., Toronto, Canada	"Devolite"
Stewart & Wood, Toronto, Canada	"Solvo"
Martin-Senour Company, Ltd., Montreal, Canada	"Martin-Senour Paint and Varnish Remover"

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

February Paint Window Display in the Store of the Vokes Hardware Co., Queen St., Toronto

Why the Canada Paint Co.'s Products Attract Trade

People are familiar with the satisfactory quality of Canada Paint Co. Paints and Varnishes. They know what the Canada Paint Co. label on a paint and varnish can means. We have been nearly fifty years building up this reputation.

Canada Paint Co. products are the result of half a century's manufacturing experience. The correctness of our formulas and materials is proved by the satisfactory quality of every can of Canada Paint Co. Paints and Varnishes.

Canada Paint Co. goods are neatly and attractively labeled. On the shelves or in the window the packages present a good appearance, and every storekeeper knows that goods that look best sell best.

Canada Paint Co. Paints and Varnishes are made to sell at popular prices. Dependable quality and popular price is a difficult combination to beat. Canada Paint Co. products pay a profit to the dealer equal to that of any reputable goods.

Finally, our store advertising is practical and effective. The above window is a good example of the display effects obtainable with the kind of advertising we furnish you. Business is good in the store handling Canada Paint Co. products.

THE CANADA PAINT COMPANY

MONTREAL TORONTO WINNIPEG

Easy Business

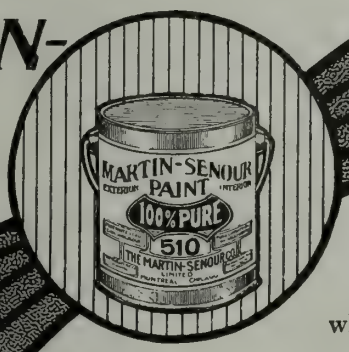
¶ Let us compare two stocks of merchandise. The first, a complete stock of KNOWN QUALITY; in other words, QUALITY that is KNOWN, hardware, tools, washers, stoves, ranges, cutlery, hose, mowers, paints, varnishes, varnish stains, all made by progressive manufacturers, who advertise and MAKE their quality KNOWN to YOUR CUSTOMERS.

¶ The second, a complete stock of hardware, tools, paints, etc., QUALITY UNKNOWN, made by UNKNOWN MANUFACTURERS, who may have been in business a thousand years, and the quality may be good, but hey never told your customers about it.

¶ The first stock is easily sold. The dealer's store soon becomes popular, his customers soon know where they can purchase the things they are acquainted with, they know his goods are standard.

¶ The second stock is hard to sell, the goods are unknown. He must do all his own advertising. You hear him say "It is as good as———" (well-known brand) and makes the price less. Here he sacrifices part of his profit to make the sale. He is swimming against the tide.

¶ GROW ALONG LINES OF LEAST RESISTANCE.



¶ The Glidden Varnish Company are the largest varnish advertisers and the largest manufacturers of HIGH-GRADE VARNISH in the world.

The Glidden Varnish Company

Toronto, Ontario

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

TO THE TRADE AND PUBLIC

NOTICE

Please take notice that on and after the First day of March, 1912, the business heretofore conducted by the William Rogers Manufacturing Company, a Canadian Branch, and by the Ontario Silver Company, Limited, will be done by The Wm. Rogers Mfg. Co., Limited, of Ontario, to which latter Company the good will, trade-marks and properties of every sort have been transferred. The same line of business under the same management, at the same plants and under the same trade-marks and good will as heretofore will be continued and maintained under the new title.

Respectfully,

WM. ROGERS MFG. CO., Canadian Branch,
ONTARIO SILVER CO., Limited.

Dated at Niagara Falls, Canada,
March 1, 1912.

Famous Red Jacket "So-Easy-to-Fix" Pumps

Made by RED JACKET MFG. CO., Davenport, Iowa

The old wood pump idea embodied in an iron pump. Absolutely *different* from all other makes. *So Easy to Work.* Valves can be removed and repaired, when necessary, without tearing up platform or taking pump from well.—"*So-Easy-to-Fix.*"

Get the exclusive agency for this line of exclusive features and control the pump trade of your locality.

"Safelock" Stays *cannot* Slip

This is a mighty strong selling point. It means that the fence will stand up to the hardest usage from animals or the elements and still keep its height and shape unimpaired. And the fact that the strand wires do not have to be kinked, owing to the positive permanent grip of the lock, means that every wire will stand its full strain. The "Safelock" is absolutely the strongest wire fence made—you can sell it as such and the test of time will bear you out to the letter. There's good money in handling "SAFELOCK." Write us about the exclusive agency for your locality. Don't put it off—Write to-day,

ST. THOMAS :: :: ONTARIO

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

The C. NORSWORTHY CO., Ltd., St. Thomas, Ont.

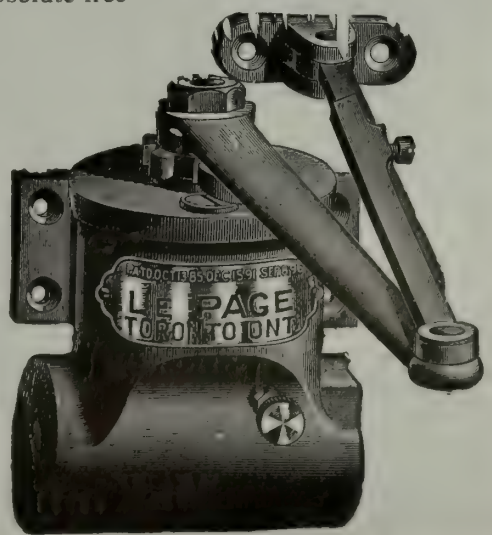
555 Jefferson Street **Roanoke, Illinois**

LOWER DOOR CHECK

The "LE PAGE" Patent OIL DOOR CHECK and SPRING

is a marvel of simplicity and has a mechanical action that is perfect.

It is the only door check made without packing in its working parts, which assures absolute freedom from packing friction.



The door on which this device is used cannot slam, as the oil in the spring cup of the check forms a cushion, which keeps the door under perfect control and allows it to close quietly.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumbscrew at the right.

The bearings are long and the spindle, with crank at lower end, is drop-forged from cold rolled steel.

Toronto public schools, Simpson's, Eaton's, etc., use this door check exclusively.

Write for circular and prices.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

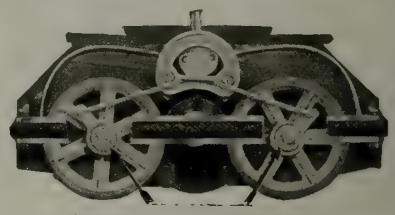
BISSELL'S

No single feature ever made a successful carpet sweeper—



But "CYCO" BALL BEARINGS constitute the *greatest* single feature in carpet sweeper construction.

They insure an *automatic* and *effective self-adjustment* of the brush to all grades of carpets.

They insure easy running, noiselessness and a *positive rotation* of the brush.

Furthermore, they maintain a *constant* and *unvarying* performance of these functions for years, producing greater sweeping power and retaining indefinitely an unimpaired sweeping efficiency.

Thirty-six years' experience in the exclusive manufacture of carpet sweepers has taught us that the fullest measure of satisfaction and practicability is obtained in a sweeper that requires *no attention* in its use beyond the mere emptying of the pans.

"CYCO" BALL BEARINGS

The fact that we have continuously maintained the lead in this and foreign countries for the entire thirty-six years we have been in business is proof enough that the great buying public recognize the genuine merit of the Bissell Sweeper.

Our special Easter Offer with free sweeper, is in force from March 1st to May 15th. Write for copy of this Announcement.

LET CUSTOMERS TRY IT 30 DAYS

They are bound to keep this fastener because it is better than words can tell; but if, by chance, one should not give satisfaction, take it back. We'll see that you don't lose. The Kling works easily and instantly. Always exerts the same pressure. Lasts longer than the harness. Retails for 25c. Gives you 50 per cent. profit. Order a dozen from your jobber. $2.00. Name "Kling" on the handle. Descriptive circular on request.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

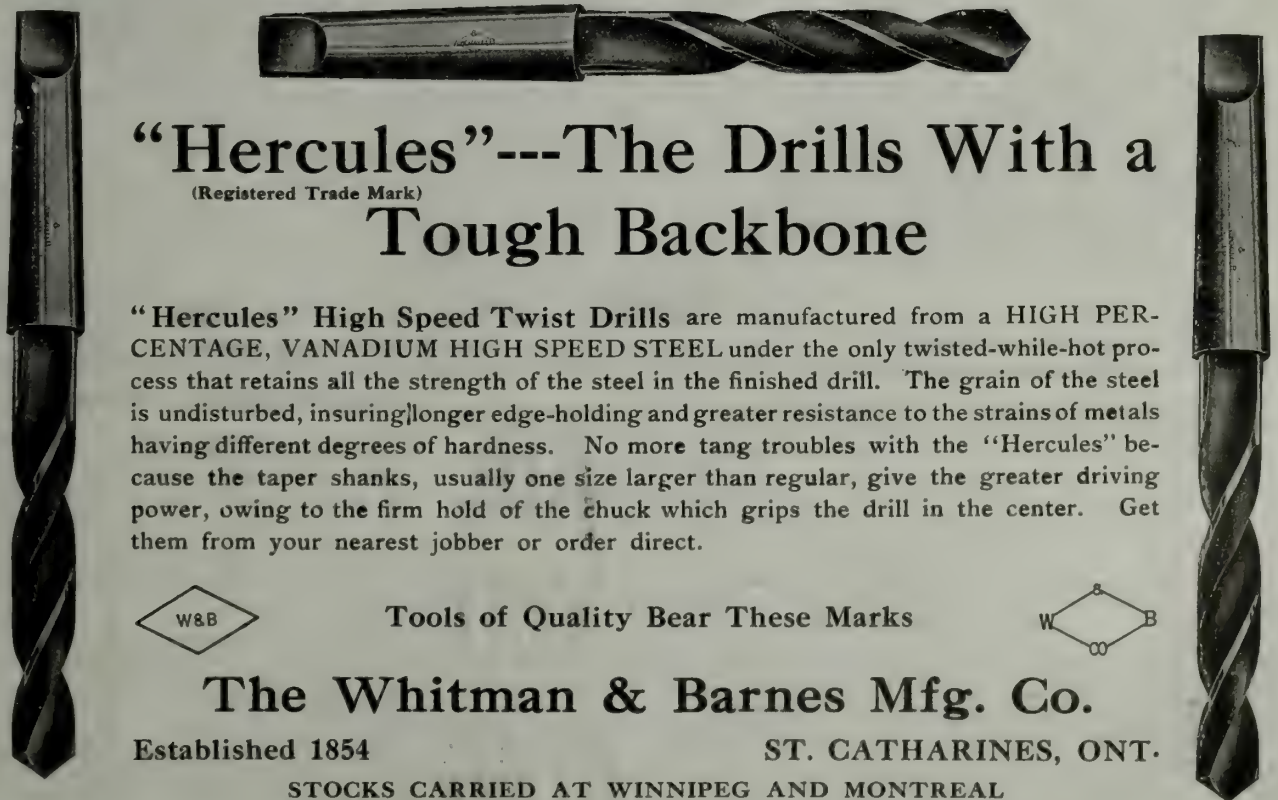
HANDLE BRANTFORD ROOFING

And Secure the BEST Roofing Trade in Your Vicinity

Every time you recommend this high-grade roofing you are paving the way for more and better business BRANTFORD ROOFING, as you know, is practically indestructible, and there is a fair margin of profit that will please you.

There are three kinds of Brantford Roofing—ASPHALT, RUBBER and CRYSTAL—and each of the three different kinds is made of long-fibred wool completely saturated with Pure Asphalt (a mineral fluid that has withstood the ravages of time for centuries).



Write to-day for samples and FREE roofing book.

BRANTFORD ROOFING CO., LIMITED, - - - Brantford, Canada

Branch Warehouses—MONTREAL, 9 Place D' Youville; WINNIPEG, 117 Market Street

The George White & Sons Co.'s plant, London, Ont., situated beside the G.T.R. main line, and right in the danger zone of flying sparks and hot cinders. But they are well protected, for even their boiler house and foundries are covered with Brantford Roofing.

"Hercules"---The Drills With a (Registered Trade Mark) Tough Backbone

"Hercules" High Speed Twist Drills are manufactured from a HIGH PERCENTAGE, VANADIUM HIGH SPEED STEEL under the only twisted-while-hot process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of metals having different degrees of hardness. No more tang troubles with the "Hercules" because the taper shanks, usually one size larger than regular, give the greater driving power, owing to the firm hold of the chuck which grips the drill in the center. Get them from your nearest jobber or order direct.

Ross Rifles Please Both Purchaser and Seller

The Rifles are good and cheap at the price, and dealers make a reasonable profit on them.

UP-TO-DATE DEALERS WON'T REST

until every customer of theirs who seeks a rifle, and can afford it, has purchased a Ross High Velocity.

THE RETAIL PRICE IS $70.00

Dealers make their profit on a $70.00 sale instead of on $25.00 or $35.00, and and the customer gets a rifle of which he may well be proud. For accuracy and power, it has absolutely no superior. Have these points ever occurred to you?

CHICAGO SPRING BUTTS

TRADE BUILDING

Have you a stock of Spring Hinges that have distinctive selling features which your salesmen can offer and which would make the prospective purchaser buy them and no other?

Chicago "Relax" Spring Hinges

are in great demand. They are substantial in construction and readily applied. The EXCLUSIVE FEATURE of spring action release, allowing the door to be placed at any desired position and automatically re engaging when the door is closed, is of recognized merit and utility.

Send for Catalogue M 26. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

FIGURE IT OUT YOURSELF!

Amatite ROOFING

THE proposition is so simple that it hardly needs figuring. It is simply this: Most of the ready roofings on the market have a smooth surface which *requires painting every year or two.*

Amatite has a real mineral surface which *needs no painting.*

The cost is about the same.

The smooth surfaced roofings are sold largely because people do not know that there is a ready roofing on the market which will give just as good, if not better, service *without paint and without attention.*

If you buy a roofing that needs painting you must figure on the expense of paint and the labor. If you neglect to paint it the roof soon falls apart.

Anyone who will spend a few moments investigating the proposition cannot help but decide on Amatite. Sample and booklets free on request.

Get the Boy Scouts Interested in Your Store

Secure a lot of growing customers and you are sure of a growing trade.

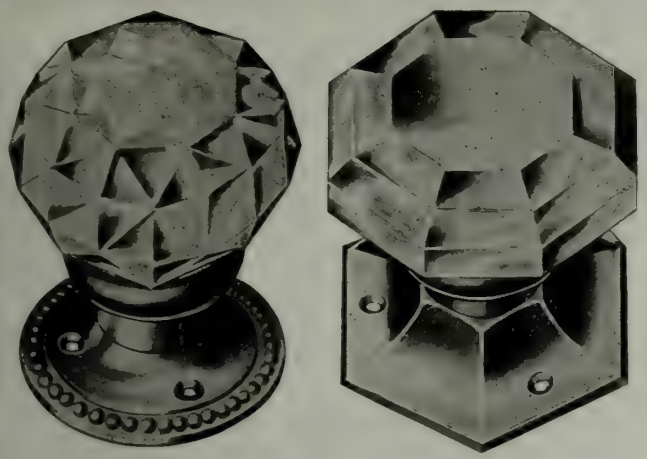
The boys who to-day buy fish-hooks, jack-knives and 25c. baseballs will soon be buying Gillette Safety Razors, tools, and baseball outfits of National League quality.

A few years more and you'll be selling to these same chaps such things as ranges, lawn mowers, wall paper and the thousand and one other things that are needed in a new home.

If you are looking to the future it certainly pays to cultivate the trade of the boys and young men. Keep tab on those who will soon be needing a razor, and get them interested in the GILLETTE.

The mechanical perfection of the GILLETTE, and the clean, quick way in which it disposes of a beard, appeals to the young man who has absorbed the Boy Scout ideas of efficiency and quick action. And once he sets his heart on a GILLETTE, he'll never be quite happy till he gets it.

Then you'll have him coming back regularly for new blades, making it very easy to keep in touch with him and hold his ever-growing trade.



Try it—it's a sound business policy.

CHICAGO SPRING BUTTS

A SUGGESTION

Have you a stock of Spring Hinges that have distinctive selling features which your salesman can offer and which would make the prospective purchaser buy them and no other?

Chicago "Triplex" Spring Butts

offer this advantage to you. The appearance, durability and finish of this article are unsurpassed, and in consideration of prices that are conservative in respect to value, the up-to-date dealer cannot afford to neglect this profitable business.

Send for Catalogue M 26. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

Chicago Spring Butt Company,

CHICAGO — TRADE C S B CO MARK — NEW YORK

A New Line

"Yankee" Plain Screw Drivers

Strong, durable, well balanced tools, of the same high quality of material and workmanship as other "Yankee" Tools, which to-day are without equal.

The blade and ferrule are highly polished, the handle of hardwood, finished in dull black, making a handsome appearance.

Each tool is thoroughly tested and the blades positively guaranteed not to turn in the handle.

Your Jobber Will Supply You

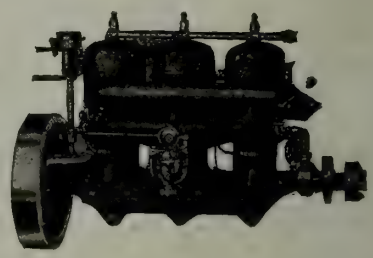
MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

The New Bulb
with its Parts Assembled

Some of the Different Style
STERNAU BATH-SPRAYS

The Season for Bath Sprays Is Here Again

¶ The refreshing effects of shower bathing are best had when the flow of the shower is gently regular, for nothing is more annoying to the bather than to have the flow of water jerky and frequently stop on account of the bulb blowing off the faucet.

¶ The Sternau Holdfast Bulb, just patented, insures freedom from the annoying features mentioned above, as it will *remain* on the faucet under the *strongest pressure* of water.

¶ This new bulb has another very desirable feature in that its construction is practically indestructible.

¶ Each Sternau Bath Spray is fitted with the new bulb, which will readily appeal to those desiring a Bath-Spray.

¶ Send for prices and full particulars regarding our co-operative plan for promoting your sales.

"THE NAME'S THE GUARANTEE"

BACKED BY

130 Years' Experience

171-A Secret Process VANADIUM Steel
(Also Straight Back)

Extract from The LONDON DAILY TELEGRAPH

WHICH SPEAKS FOR ITSELF

As a matter of fact, the trade of which Sheffield is the centre has in the last year or two fought—and won—a notable fight. Germany was a formidable competitor; America a yet more serious one, in the matter of tools, and especially SAWS. The English makers set themselves to meet this sharp rivalry, availing themselves of a superior position alike in materials and highly specialized skill. They took full advantage of the technical schools, with their scientific teaching as to metals and the treatment of steel, and paid more attention than they have ever done before to design and finish. Their energy and enterprise won prompt recognition from the buyers for the retail trade, and within very recent days they have enjoyed the spectacle of seeing the agent of one of the most noted firms of tool-makers in the United States coming over to make a tour of inquiry as to what had come over English trade that they had lost it so entirely. The British manufacturers had, moreover, proved conclusively that, quality for quality, their products had nothing whatever to fear on the important matter of retail selling price, and their victory was complete.

IF you are not handling our Saws and Edge Tools, you are paying more for inferior goods. Does it pay you ?

BULL RINGS

Perhaps you have not thought of Magnolia Metal in connection with Bull Rings—it seems to be just the thing. It is also good for piston and stem rod packing.

MOBILE LIGHT AND RAILROAD COMPANY.

Mobile, Ala., January 12th, 1912.

Gentlemen,—In answer to your inquiry of January 2nd, will state that the Magnolia Metal put in our Bull Rings two years ago is giving perfect satisfaction. The metal has worn about 1/32 in. on the bottom in that time. The ring is 58 in. in diameter and 11 in. of bearing surface. Two days were used in the job of removing the ring, preparing it for filling and turning it in a lathe to fit cylinder after it was poured. If the above is of any use to you, you may use it any way you like.

Respectfully,

C. MANKER,

Engineer Power Station.

The method employed in applying Magnolia as described by Mr. Manker will be sent to anyone desiring the information.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

43 EXCHANGE PLACE

NEW YORK CITY

Put the FORD to this test.

Take an ordinary piece of wood, after starting the screw point, do not use any pressure on the brace. After the lip begins to cut, count the number of turns it requires to bore through the wood. Then do the same on the end grain of Hickory or any hard wood you wish. Then—try any other Bit you may have in these same ways.

The result will prove our claim that the Ford is the fastest boring, smoothest working and most accurate boring Bit yet produced. Give the FORD the above test.

and be convinced of its superiority

It is universally used by all progressive carpenters and electricians, and its almost phenomenal sale tells the story of its practicability for all kinds of work.

It bores almost twice as fast as the average bit in both hard and soft wood, wet or dry, or even frozen. It is unexcelled for the finest, fussiest work.

No clogging, no turning off—a knot can't stop it, it is accurate to the fraction of an inch. The FORD is imitated but not equalled.

Write for our free Booklet E.

Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In "The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.

How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

Hamilton Jewel Gas Ranges

The illustration shows our No. 240 Gas Range. The additional working space provided on the top of the range by the raising of the side oven and broiler is a feature that commands interest everywhere. The oven and broiler are large and placed at a convenient height. The elevated shelf and steel under-shelf are additional space-providers, and combine to make this range one of our most popular styles.

Style 240

HAMILTON JEWEL Gas Ranges are crowded with real sale-producing features.

Simple in design.

Easily operated.

Excellent working and wearing qualities.

Unsurpassed in actual results obtained.

Equipped with the Graves' Patent Safety Lighter and Jewel Adjustable Needle Valves.

Economical in time, fuel and labor.

THE PRICE IS RIGHT

Make 1912 the best ever.

OVERHEAD EXPENSES

How to Arrive at the Percentage to be Allowed for the Cost of Doing Business—Many Hardwaremen Explain Their Method of Covering the Overhead Expenses—The Average Percentage Fixed is 17 Per Cent.—Method Employed By a Western Firm to Fix Selling Prices on a Proper Basis.

The merchant who has not accurately determined the cost of running his business is not in a position to fix his selling prices with the surety of profit. He is not in a position to manage any phase of the business, in fact. He is "working in the dark."

The term "overhead expenses," is used to apply to the cost of doing business and the phrase is highly expressive. Overhead expenses include practically every expenditure with the exception of what is paid out for goods. The method now employed by progressive merchants is to reckon the overhead expenses on the turnover for the year and thus determine what percentage the cost of doing business represents.

As much divergence of opinion has been met with in regard to the items which should be figured in as overhead expenses and also as to the percentage which should be allowed, an effort has been made by Hardware & Metal to secure reliable information as to the methods employed by progressive hardwaremen. Opinions have been secured from dealers in all parts of the country.

What are "Overhead Expenses?"

The first question which arises is, what charges constitute the overhead expenses of a retail store?

An Ontario hardwareman writes us on this point as follows:

"I reckon the following items in on the cost of doing business:—Rent, light, heat, water and ice, telephone (two systems here), office supplies, insurance, advertising, donations, depreciation, losses (returned goods, breakage, etc.), a certain percentage for bad debts, appropriation for window dressing, delivery, salaries to staff and incidentals.

"Under the head of incidentals come such items as:—Calendars, association fees, Christmas gifts to staff, telegrams and so on.

"Our expenses we reckon at 13 per cent. This may seem low but it is made possible by the fact that, as our firm is made up of two partners, we do not have to carry as large a staff and we economize in salaries."

Salary for Proprietors.

This list is a fairly comprehensive one but the firm in question have made a grievous mistake. The rate they have struck is low because of this mistake.

Provision should always be made in the overhead expenses for the proprietor's salary. He is giving his time and brains to the business and is entitled to a salary just the same as the members of the staff. If no charge is made against the business; the proprietor must count on getting his salary out of the profits; and in that case, the profits left will be slim indeed.

The firm quoted above should allow a salary for each partner. They would then find that the overhead expenses would be somewhere around 18 per cent. It makes a big hole in the profits to charge only 13 per cent. for the cost of doing business when 18 per cent. would be nearer the mark.

Before leaving this point, it is interesting to quote an extract from another letter received: "In my opinion," writes this hardwareman, "the dealer should always allow from $1,500 to $2,000 for himself as a salary. He earns it and is entitled to charge that amount against the selling price of the goods."

The Depreciation Charge.

An important item to consider in connection with the overhead expenses is the depreciation charge. Does the average hardwareman write off enough to cover the depreciation in stock, premises and fixtures? One hardwareman, located in Quebec, thinks not at any rate. He writes as follows:

"I doubt if many of us realize just how heavy the loss from depreciation is. If I happened to let things slide for one year, I would find the shelves carrying a heavy load of goods which I could not sell at the regular figure. Goods depreciate rapidly and the wear and tear on store fixtures is very heavy. I am replacing a showcase which I put in eight years ago; and you may be sure I haven't been allowing 12 per cent. for depreciation on the price of that fixture, so I am out money. I own the building I am in and have been allowing 3 per cent. for depreciation on the premises and the store fixtures. I've come to the conclusion that it is not enough."

This is an important point. A number of the replies received make no mention of depreciation charges whatever. It may be that it escaped their minds but the item is so important that it should not be passed over in that way.

Bad Debts.

Where the business is not conducted on the cash basis, a good allowance should be made for bad debts. No matter how careful a merchant may be in the supervision of credits, he will get a certain number of "dead-beats" on his books. Customers will move out of town, forgetting to "settle," disputes will arise involving a certain amount of "writing off;" and, taking it all around, the merchant can be certain of suffering a substantial percentage of loss.

"I reckoned my losses last year from bad debts to be nearly 3 per cent.," writes one dealer. "I intend to allow that margin this year and distribute it all around to protect myself from like loss."

Extra Help.

A good many merchants neglect to figure in extra help. They add up the

salaries they are paying to clerks, bookkeeper and driver and enter the total under the heading of "salaries."

What about Saturdays when it is frequently necessary to secure an extra clerk for the day?

What about the extra help needed to handle the Christmas trade?

These are items which must be considered. Extra help totals quite a sum by the end of the year.

What is the Percentage?

The second question which arises is, what percentage covers the cost of doing business in the average store?

It has been learned that some dealers charge as high as 25 per cent., and others get along on as low a charge as 10 per cent. None of the dealers heard from in this connection, however, go to either of these extremes. The highest estimate received was 20 per cent. and the lowest 12 per cent. The majority were ground 17 per cent., and that seems to be a fair average.

A Western Ontario hardwareman writes: "Ours is an average business, costing at present (premises recently enlarged), 17 per cent. of sales for running expenses, which means about 15 per cent. under ordinary circumstances. We figure that our average gross profit should run at least 5 per cent. net on sales, so that if a man turns his stock say three times a year, as he should, he would have a dividend of 15 per cent. We want at present at least 22 per cent. average on sales. We would say, however, that hardware profits are just the same gross that they have been for years, notwithstanding advances in nearly all other lines."

A Toronto firm state: "We charge 18 per cent. for cost of doing business. With salaries going up the way they are and expenses generally increasing while profits remain fixed, this percentage is barely enough."

A letter has been received from James Purvis, of Sudbury, bearing on this question from an interesting standpoint. He writes as follows:

"I have followed very closely the discussion that has been carried on for the last two or three months in your journal relative to retail profit. To me it is quite evident that the advances asked on goods are all or more than the trade will stand. Take an article in every day use that costs say $1 laid down. When we ask $1.50, or 50 per cent. advance on it, we are in a position to be easily undersold by the departmental store or catalogue house, and yet that is only allowing 33 1-3 per cent. on the sale for profit and cost of doing business, as the amount you are making is on the gross turn over and not on the cost of the goods. Margins cannot and will not increase. The cost of doing business has become too great and now two courses present themselves:—Increasese your business, if you can, or amalgamate. If business can be increased on the present expense well and good. Failing that, let two or more of the smaller concerns join forces and thereby reduce the overhead expense. No business carrying an overhead expense of 20 per cent. can sell goods at the prices the public expect and give any return on the investment.

"The retailers must bear in mind the large quantities of heavy goods, such as wire nails, barbed wire, besides twine, etc., that he sells at an actual loss. At the end of the year, he cannot expect to show more than from 20 to 25 per cent. on his turnover.

"There is no doubt that conditions for the most of us have changed for the worse in the last ten years. Expenses have increased at a much greater rate than profits so that many are actually losing. Fewer hardware stores at the present expense would work a cure. Will we have any retail mergers?"

James Purvis.

Undoubtedly the cost of doing business at the present time is heavy. A Toronto hardwareman states that his overhead expenses ten years ago aggregated 17 per cent. Since then he has increased his turnover by $20,000 and his overhead expense is still about 17 per cent. In other words it costs him over $3,000 more to do business now than it did ten years ago.

How to Figure It.

Finally, it is necessary for the dealer to figure his cost of doing business properly if he would avoid loss. Some dealers figure it out this way. Their turnover has been a certain amount for the year and their expenses have been so much. The expenses equal, say 18 per cent. of the turnover. The next step they take is to add 18 per cent. to the cost price of each article in order to fix the selling price.

It is no wonder that retail dealers fail when this method is so frequently followed. The percentage for cost of doing business is reckoned on the total turnover and must always be figured on the selling price and not on the cost price of an article.

A system has been adopted by Campbell & Ferguson, of Waskada, which prevents all mistakes of this nature and makes it possible to find the selling price of an article automatically. W. K. Cherry, manager of the Waskada branch, writes as follows:

"Having noticed quite a few articles in Hardware & Metal, regarding the marking of goods, we are enclosing a copy of a table that we use. We have it posted up in our marking-off room and find it very handy."

The accompanying illustration shows the table used.

The Importance of the Store Policy

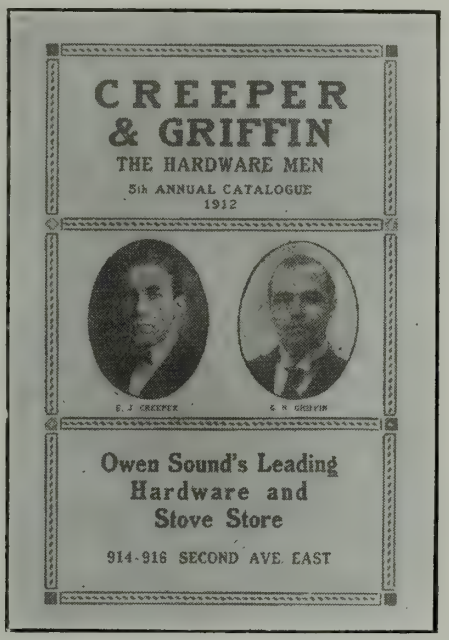
Every Store Has a Policy of its Own, Either a Good or a Bad One—What is Yours?—The Same Policy is Generally Observed in all Phases of Business Management—The Progressive Precepts Laid down by Owen Sound Firm.

What is your store policy?

Although some may not realize it, a definite policy is just as necessary to a merchant as it is to a political party. The dealer lays down certain principles on which he moulds the conduct of his business. The public come to understand what that policy is in time and the prosperity of the dealer depends on whether his policy has found favor or not.

In some cases, the store policy is fixed unconsciously. The dealer who makes it his endeavor to dispose of a large volume of goods and carries a cheap stock, would repudiate the suggestion that he had adopted a "sell 'em at any cost" policy. Nevertheless that is the guiding principle in the management of his store. People find that the goods they buy from him do not last and they go to him only when they want something cheap.

The writer once asked a hardwareman what his store policy was and received a rather blank look in response.



"I don't just understand what you mean," he said.

At that moment a lady entered the store and the proprietor hurried off to wait upon her. She had a saucepan in her hand which she handed over to him with the curt remark that she had bought it in the store a few days before but wanted him to take it back as it was not "just what she wanted." That the dealer was annoyed goes without saying but never for a moment did he let the woman see it. "We always strive to please our customers," he declared. "Certainly we will take it back, Mrs. ————. Perhaps I can show you some other kind." He made a sale. Before the transaction was concluded, a man dropped in to make a small purchase. "How's that range I sold you a couple of weeks ago, working?' asked the dealer. "Well, it's giving us a little trouble," said the man "Perhaps we don't understand yet just how to handle it." "I'll send a man up," said the dealer promptly. Then he added: "No, I'll drop in myself on the way home to lunch."

That man's policy was obvious to all. And it was a money maker. He endeavored to give the best service he knew how and to please his customers.

Covering All Phases.

The dealer requires a policy to cover all phases of the business—the buying, the selling, the advertising and the financing. It will generally be found, however, that the same underlying principle

A reproduction of the front cover of the catalogue issued this spring by Creeper & Griffin.

is the guiding factor in the manner in which the dealer handles each part of his business. The merchant who carries a cheap stock and relies upon his low prices to draw trade will base his buying operations on the basis of cheapness alone. He will carry a cheap staff; and get cheap service, you may be sure. On the other hand, the dealer who endeavors to stock his store with first-class goods will encourage sales on the basis of quality, will surround himself with capable clerks and will finance the business on a sound, equitable footing.

Conditions Govern Policy.

Sometimes conditions govern the policy of the store. The writer visited a store recently which was laid out and stocked on a plan which can best be described as antique. The space was small and cramped. The shelves were filled with goods arranged with no semblance of order,—the drawers were fairly bursting open with the overload they contained, the counters were covered with a higgledy-piggledy collection of stuff. A clerk who lacked a shave badly, was waiting on the store. He made a credit sale, wrote down a memo on a piece of paper, that he found under a heap of mouse traps standing on the counter, and stuck it in a drawer behind him. The writer indulged in a little speculation as to whether that memo would ever be found again; and finally concluded that chances were rather against it.

Everything about that establishment reflected the same condition of confusion and lack of system. The proprietor and his clerk were never certain just where to look for things. When waiting on a customer, it took them so long to find the article desired and to make change that they had no time for anything else. The business system was shockingly loose. Is it necessary to add that this dealer was always behind with his payments, always in financial trouble?

Undoubtedly environment had led to the loose methods followed. If the store had been larger and the stock arranged on a better system, that clerk would have been more likely to keep his work up to the mark. He would probably have shaved more often. There is no greater incentive to good work than the opportunity to do good work.

A crisp summing-up of a store policy, which can be cited as possessing high merit, is found in the catalogue issued this spring by Creeper & Griffin, of Owen Sound. On the introductory page, they say:

"We desire to place in the hands of the public our Fifth Annual Illustrated Catalogue, and also to thank you for the confidence shown us in the past year. We ask your honest criticism; and if you have reason to criticise and you don't we never learn that you are not entirely satisfied with your transactions with us. It may mean the loss of your goodwill, your trade and influence for us. A mistake on our part of one order left uncorrected may cost us many. Every order you give us is accepted with the understanding and agreement that if the goods you get are not perfectly satisfactory they can be returned to us and we will refund the purchase price. We strive with every measure of resource to leave no room for criticism; still, occasionally, errors and misunderstandings will creep in. We do a cash business and by so doing are able to give the public the best service, and when quality is considered, the best price.

"If our goods and our service please you you cannot do us a greater favor than to tell your friends and neighbors.

"If our goods and our service do not please you you cannot do us a greater favor than to tell us.

"We have but one price, and that is the price printed in this catalogue. It is exactly the same to you as to the largest buyer."

OVERHEAD EXPENSES.

The problem of keeping overhead expenses within bounds is one of the most serious that faces the retail dealer. Expenses have acquired the faculty of climbing up nowadays with great speed; much faster, in fact, than prices. The dealer, who does not keep a close watch on what it is costing him to do business will soon find that the increase in expenses has swallowed up his profits.

Under the circumstances, the problem of reckoning overhead expenses and charging for same, becomes one of vital importance to every hardwareman. In an article appearing in this issue, the problem is discussed at some length, opinions of a number of representative hardware dealers being given. While some state that they find the cost of doing business to run as high as 20 per cent., the average percentage named is 17. This is accepted as an average which should apply to every hardware business more or less. Exceptional circumstances may sometimes entail heavier expenses, but the dealer whose cost of doing business exceeds 20 per cent. is running too close to the wind. Despite the fact that expenses have increased materially of late years, careful management can keep the cost of maintenance at or below 20 per cent.

Another moot point is the method to be employed in determining what the cost of doing business is. Overhead expenses include practically everything but the cost of the goods. Charges for maintenance of the store, salaries, advertising, provision for depreciation and losses should all be figured in as overhead expenses. An item which should never be omitted is the proprietor's salary. The profit which the merchant makes is not the only remuneration due him. It represents the return on his investment. For the time and brains expended in the management of the store, the proprietor deserves some return also, and it is logical that this should be charged against the goods. The salary of the proprietor should be reckoned in the selling price, just as much as the salaries of the members of the staff.

Too much care cannot be given to finding the full cost of doing business. If items are forgotten, it follows that they are not charged up or provided for in any way, and must ultimately come out of the profits. If the dealer is very careless, and allows a number of these leaks to go unnoticed, he soon finds that his profits have vanished entirely.

GOODS SELLING THEMSELVES.

From time to time the remark is made that certain goods will sell themselves. The phrase is not always correctly employed; yet there are occasions when it is to be lamented that goods are not given a fair chance to speak for themselves. If this were allowed, the sales would come more readily.

With salesmanship, as with everything else, it is possible to be too enthusiastic—too insistent. Sporting goods, for example may suffer from too much demonstration. If a baseball bat is to be sold the sale will be more quickly made if the one desiring the bat is allowed to try a number, to examine the grain, and to pick out the model which best suits him. The clerk may swing the bat, and talk about its good features, but his talk will fall on rather heedless ears—the man wants to examine for himself.

It is so with tennis rackets. If a sale is to be made, the way to make it is to get the racket in the prospective purchaser's hand. Let him examine the grip and the reinforced frame; let him feel the balance. He probably knows more about a racket than does the clerk, and he does not want to be talked at. He wants to select. A good salesman can do much to promote sales, but a good salesman will realize that there is a time to keep silent as well as a time to talk. It is a thing young clerks should remember.

THE WEDDING PRESENT TRADE.

The departmental store serves one valuable purpose from the standpoint of the retail dealer. It gives him ideas worth following. With high priced specialists in every department, the departmental store "sets the pace" in many respects.

It is worth noting, therefore, that in the windows of the departmental stores, wedding present displays have started to put in an appearance. Cutlery, silverware, brass goods, cut glass, constitute these displays. It is indeed noteworthy that the departmental store shows for wedding presents only goods which are handled in up-to-date hardware stores.

Dealers should recognize that the demand is now starting and that, if they desire to secure their share of the trade, it is time to begin work. Window displays will now be in order.

OVERDOING FRIENDLINESS.

Courtesy is an absolute necessity for the salesman who would achieve success. Nor does courtesy have any connection with a cringing manner. People do not like to buy from one who fawns upon them. Neither do they like to have dealings with one who is too familiar. They want to do busisess with a man—just a man.

In this age, when Jack is as good as his master, and when Jack is liable to be a master himself to-morrow, there is little of the cringing manner shown. It is a fault which is fast disappearing, for which let there be universal thanksgiving. But the fault of over-friendliness has not decreased. Many clerks there are who appreciate the difference between a pleasant manner and too great familiarity; but, alas, there are others who feel they may take liberties with those buying from them. They joke, they make personal remarks in a bantering way; generally they are flippant and annoying.

It has been said that while no man has joked an enemy into a friend, many have joked a friend into an enemy. There is much truth in this. By being over familiar, officious even, a clerk can turn a friendly customer into an enemy of the store. By so doing he becomes a thief of his employer's profits, and of his own prospects. customer rendered unfriendly will tell others

of his grievance, and the damage will go on compounding.

A pleasant, courteous manner is to be much desired, but the friendliness which develops into that familiarity which breeds contempt is to be avoided as a contagious disease.

POINTED EDITORIALS.

What is your store policy?

* * *

The June wedding present trade will soon open. Are you prepared for it?

* * *

There is no business detriment like the wagging tongue of a dissatisfied customer.

* * *

Is the dealer doing his full share to spread knowledge of the value and utility of paint to educate the public to use paint more?

* * *

Dealers who neglected to note the continued predictions in Hardware and Metal that white lead was going to advance, are now "sadder and wiser."

* * *

The dealer who has overhead expenses which run as high as 25 per cent. of his total turnover had better "get from under." Something is bound to drop.

* * *

Twenty years ago the outlook for builders' hardware was reported to be very dull. Contractors had little to do and were regarded as unsafe financially. To-day the only doubt felt is with reference to the supply. The sales of builders' hardware bid fair to break all records.

* * *

The term "overhead expenses" is a most apt one to describe the cost of running a business. Those expenses are hanging suspended over the head of the dealer. If they become too heavy, down comes the whole structure. The expenses must not be too heavy for the business supporting them.

* * *

The Parcels Post agitation seems to have been temporarily lost sight of in the United States, in the heat of the presidential nomination campaigns. The Taft-Roosevelt struggle is occupying the centre of the stage and freight rates have been shoved to the background, for the time being.

* * *

April showers may bring May flowers, but it takes June weddings to bring May "showers." Kitchen "showers" for brides are becoming exceedingly popular, and the hardwareman can make them more popular by arranging good window displays of granite, tin, aluminum and copper ware.

* * *

A hardware dealer advertises his tool stock as follows: "What we are driving at; what we want to "hammer" in, should be "plane" to every builder. "Awl" our hardware is the best you ever "saw," and the success of our business "hinges" on this—"square" deal. None of our customers ever "bolt." This is on the "level" so "brace" up and give us a "bit" of your trade. Good hardware "adz" value to any building."

8-Cent White Lead.

IN accordance with predictions, white lead has again advanced. There is no stopping this commodity. It is a good thing, and seemingly cannot be kept down. But alack, there are those who would wish things otherwise. A fifteen cent advance per hundredweight does not seem anything tremendous, when a single hundredweight is considered; but just as the little drops of water and the tiny specks of sand, as we heard those many years ago, form the mighty ocean and the barren strand; so a number of fifteen cents makes an amount which causes a perceptible diminution in a man's bankroll.

Fifteen cents added to an already good price makes what may be considered a high price for white lead. To be exact, it makes the figure $7.00 and $7.15, instead of $6.85 and $7.00. Yet let not the hardware dealer view this price with too great disfavor; for from present indications it would appear that he may before long look back at this amount as one looks back upon a pleasant day that is past.

The truth is that white lead is likely to advance still further. Eight cent lead is now the prediction of many well informed. "That won't come," some will say. Perhaps not, but it is worth remembering that those who are now mentioning 8 cent lead as a probability, are those who some little time ago announced that the commodity would shortly sell at 7 cents. Men have been known to pick two winners successively. History does repeat itself. While the fact that a man has predicted correctly before does not prove that he will do this again, it does indicate that some careful consideration should be given all his predicitions.

What is it that has put the price of white lead up to 7 cents? What is it that may bring a still further advance? Well may handlers of white lead ponder these questions.

Of course, the real cause—as in practically every question of price—is the recognized law of supply and demand. Not only is the demand for white lead so great that the corroders are having difficulty in meeting it, but the scarcity of the pig lead is such that the corroders are having difficulty getting the raw material which makes the finished product possible. Such a state of affairs naturally brings about a higher price level.

The heavy demand for white lead needs little explanation here. It is the result of the greater awakening of Canada and the Canadian people. Buildings are shooting up all over. People have been brought to appreciate the value of white lead as a decoration for these. They also realize the beneficial results which may be secured by using white lead in an old building. Indeed a growing country has realized its growing need of white lead.

The scarcity of the pig, which is making production difficult, may partially be attributed to the recent coal strike. Shipments were interfered with, and while supplies are now coming out in satisfactory style, the manufacturers are having to pay more for their lead. Their margin of profit—never large—is thus reduced to a decimal with naughts standing near the decimal point. Some one must enable the manufacturer to make a fair profit. If, therefore, he must pay more for his white lead, he must get more for it.

There is another consideration which brought about the present advance, and which gives some ground for the general belief that a still higher price will shortly be struck. It is the difficulty which is being experienced in securing workmen, and the high price the available workmen demand. Manufacturers are rushing production.

Points Regarding Sporting Goods

Not Wise to Try to Show Something of Everything in the Window Trim—Better to Have Everything of Something. A Danger of Overdoing Advice—Let the Customer Test the Goods for Himself, Quicker and Better Results Will Thus be Secured—Some Space Saving Devices.

Like Gaul of old, the salesmanship of Sporting Goods is divided into three parts. It is necessary in the first place to have the goods. Then an arrangement must be made which will make people see the goods; and finally it is necessary to bring the goods and the people together.

The first step necessitates good buying and a close association with the outside, for it is obvious that only these goods may be successfully handled for which there is a demand, or for which it is reasonable to suppose a demand can be created. There is not a great deal of use stocking lacrosse sticks in a community where baseball is the great sport. Neither is it wise to carry fishing tackle in a district remote from good fishing waters.

Great Value of Windows.

The proper class of goods once secured, however, there then arises the problem of bringing their presence home ot the people. How this may best be done is a problem which varies according to the locality in which the store is placed; but one thing is certain; and that is that the window is of great value. In village, town, or large city, a window display will attract the attention of all passing, and thus the goods on show will be widely advertised.

There are many ways of making window trims. All are good, but some are better than others. Perhaps the greatest fault which is noticed is the desire to get a little of everything handled in the one window. Confusion is the natural result.

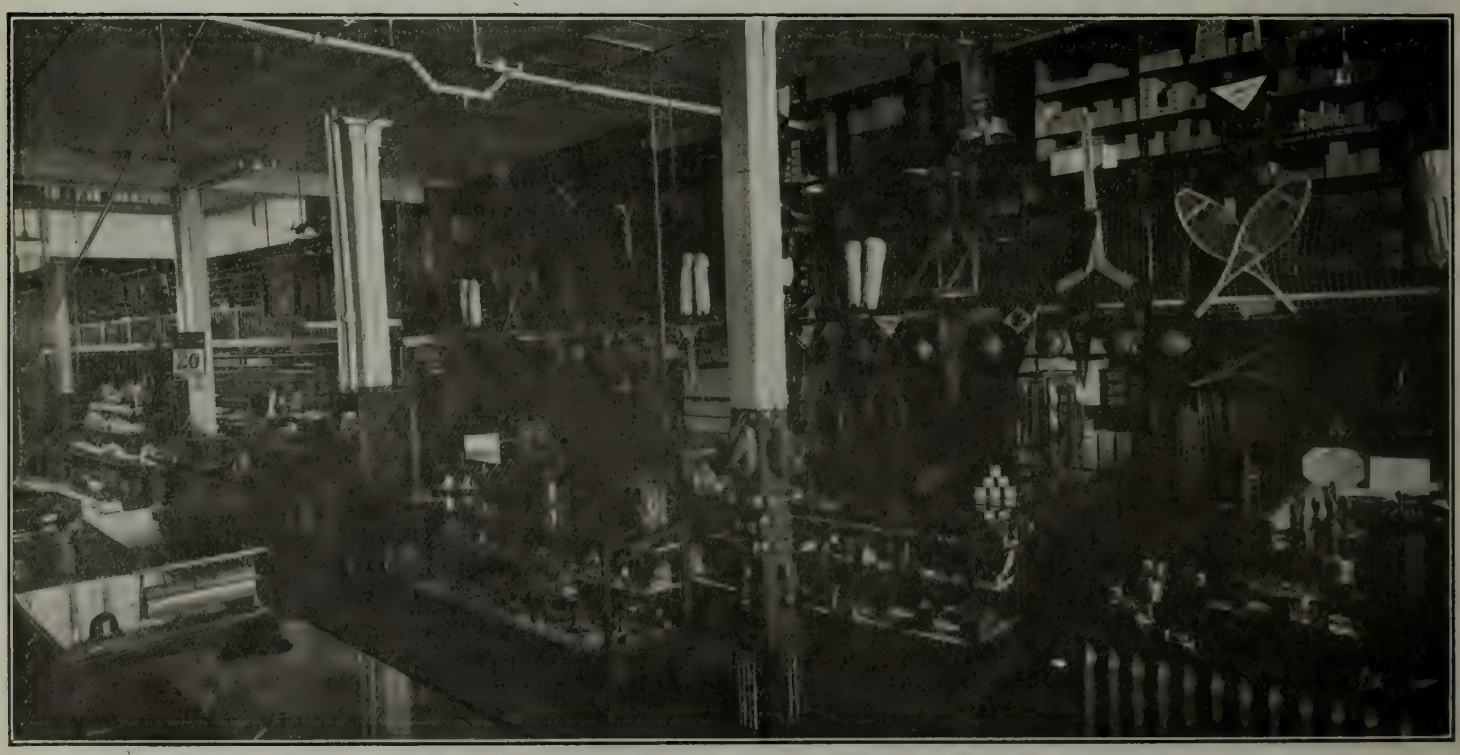
What Constitutes a Good Trim?

Some one has said that a truly educated man is one who knows something of everything and everything of something. The same idea applies in part to windows. It is the window that shows everything of something which is truly educational.

Only this week two young men were standing in front of a Montreal hardware store, one of the windows of which was given over entirely to baseball goods. There were bats, masks, gloves of all styles—fielders' gloves, first baseman's gloves, the big gloves used only by catchers. There were the wicked but necessary baseball spikes, the shoes, the uniforms; and adding a touch of wider interest were framed pictures of some of the baseball celebraties. Ty. Cobb, the Georgian Peach. Baker, of home run fame. Eddie Collins, Christie Matthewson, Big-Chief Bender, "Mooney" Gibson and others.

The young men studied the window for some little time, and spoke of the various players, and of the different gloves. Then one of them remarked that he would like to see some golf clubs in the window.

An Outsider's Judgment.

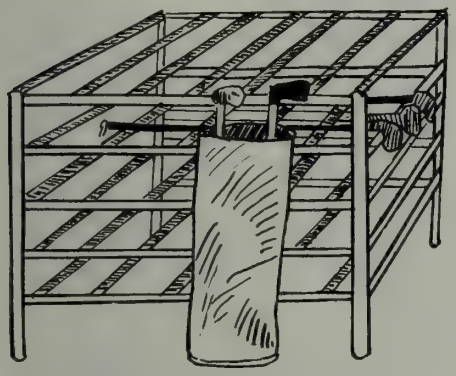


"Well," remarked his companion, "you can bet that there are any number of golf clubs inside. A firm that has such a range of baseball goods isn't going to be content with any poor assortments of goods needed for other popular games."

There is a world of truth in this statement of the young man. People do not only judge a man's stock of a certain line by the display of that line which they see in the window. They judge all other lines by this display too. If they see an Irish stew window—a window in which there is a little of everything and not much of anything—they are likely to think that the stock inside will be similar—varied, but not complete. A fine display of one line, on the other hand, tends rather to give the impression that other lines—not shown—will be as full.

One Window, One Theme.

Frequent changes of windows are undoubtedly desirable, but a window is something like a business letter, it should treat of only one subject.



Inside the store the arrangement of

A Corner in the Sporting Goods Department of the James Walker Hardware Co., Montreal.

sporting goods is as important as is the arrangement in the window. Only in the store everything may be shown by careful scheming. It is not necessary here to speak of all the contrivances which are used to render possible a wide display of goods, but something may well be said of two bits of store furniture just introduced in an up-to-date sporting department.

To this store the management has attracted a high-grade of custom, and the

A Stand for the Display of Golf Supplies but which can be used for other purposes.

demand for tennis rackets and golf clubs is therefore large. Now to show a wide range of these goods was a problem. It was a serious problem too, for the space available was not at all great. The solution, however, is all that could be desired. The floor space is not much reduced, and the range of rackets and clubs which are on hand, is large indeed.

Some Space Saving Stands.

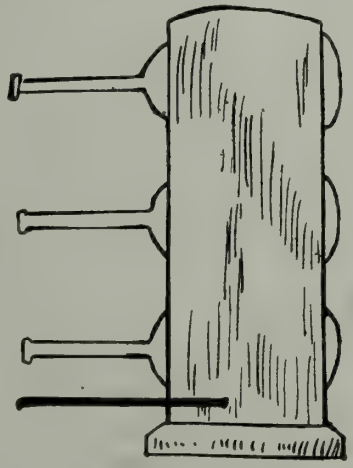
For the tennis rackets the management has had made a stand resembling a book shelf more than anything else. There are three shelves upon which the rackets rest, the handles protruding at one end, being supported by a brass rod which has been built out about nine inches from the shelf. On each shelf there are perhaps a score or more rackets, yet the whole stand is not three feet wide. It is so convenient that the purchaser can try a dozen or more rackets in a very few minutes. Even though the store is not a wide one there is ample floor room left for the rackets to be swung as in a game. Thus the one contemplating a purchase can experiment accurately, until he picks a racket which in weight, balance, and grip suits him entirely.

Along the same line is a stand prepared particularly for the display of golf clubs, but which is also used for sundry supplementary lines.

This stand, a cut of which is here given, is perhaps two feet wide by three feet long, and stands about four feet from the ground. It has not only a top, but shelves arranged in layers, a space of five or six inches being left between each. The shelves are made of slats, so that a better view of what is upon the lower ones can be obtained.

Enables Quick Selection.

But in the case of this stand it is the ends that are most interesting, for the shelves carry golf clubs, the extremes of which protrude so that the club part may be clearly seen at one end, and the handle at the other.



On this stand a wide variety of golf clubs are arrayed. The player looking for an iron can run over the business end of the clubs, and seeing some which appeal to him he can easily draw these out and test them—try the spring and the weight.

This golf club stand takes but little room, and there is good space left for testing the goods. This actual testing is perhaps the best salesman which a dealer has.

A few days ago three young men, discussing tennis, started to speculate upon the best place to buy their supplies. "Well," said one, "I'm strong for ——. They don't everlastingly fuss about with you there. Let you look over their stock quietly, and test what you think might suit you. They have the goods and are not afraid to let a man who knows something about it make a careful examination. I'm going back there."

Avoid Too Much Advice.

Undoubtedly this is a thing to remember. The book-lover does not go to a book store where a clerk, unacquainted with his tastes, rushes about picking up

A Rack for Showing Tennis Rackets.

volumes and saying, "this is something you would like." The real book-lover goes to a place where he is allowed to "browse" among the books. He will buy there, and buy largely. So it is with sporting goods. A man who understands a game thoroughly does not want too many suggestions. He wants to be shown the goods and to be allowed to do his own buying.

There is of course another class of customer. The class who are starting a game, not knowing a great deal about it. Then is the time for good salesmanship—conscientious salesmanship. It is an opportunity for the dealer to unload old stuff. But if the dealer is wise he will not do this. That way future sales are lost, for the novice will not remain a novice long. He will soon learn that he was deceived. He will hold it against the dealer, and will not be slow to say a word against that store, though he may not tell how he was imposed upon.

This is a great sporting year. The fine weather has brought the enthusiasts out in numbers. Saturday last was a banner day, and there will undoubtedly be others. There is large business and large profits to be secured from sporting goods, but the salesmanship, in all its branches, is an important consideration. Upon the wisdom of the methods employed the number of the sales depends.

Catalogues and Booklets

Gas Stoves.

The Burrow, Stewart & Milne Co., Hamilton, have issued a neat catalogue describing their line of Jewel gas stoves and gas appliances for cooking and heating. It is a very complete booklet and gives a large quantity of descriptive information with reference to each style and part. It contains 80 pages, and is fully illustrated. Descriptions are also given of carving or steam table, hot water, tea and coffee urns, cake bakers, hot plates, water heaters, gas heaters, gas burners, air mixers, artificial fuel for grates, hot plate ovens, steel ranges, base burners and warm air furnaces.

Suction Cleaner.

Magic Appliances, Ltd., 6 Farrington Ave., London, have issued a booklet, describing their Magic Suction Cleaner. It is fully illustrated and contains a masterly exposition of the advantages of this new method of housecleaning. Each illustration shows some one way in which the vacuum cleaner can be put to good use in the household.

Wheelbarrows.

The Meaford Wheelbarrow Co., Meaford, Ontario, are issuing a booklet showing their line of wheelbarrows, wheel and drag road scrapers, trucks, dump carts, dump cars, baggage barrows, push carts, mortar hods, etc. It contains 102 pages with introduction and index, and is well illustrated. A large amount of valuable information on these lines is contained.

Hardware Store Publicity

Chapter 8—The Introduction.

The reading matter in an advertisement is divided into a number of parts. The first part is the headline. Second comes the introduction, which, follows up the idea contained in the headline and consists of a more or less general argument with reference to the articles advertised.

The introduction is an important feature. The headline catches the eye but it devolves on the introduction to hold the attention of the reader and awaken enough interest to induce perusal of the body of the ad. where descriptions and prices are given.

It must, therefore, be written logically and forcefully. It must present reasons why certain goods are needed and, perhaps, sketch briefly a few of the advantages of the goods. Several points should be borne in mind in writing introductions. They must be brief. Brevity is the one essential necessary in every section of an advertisement. Exaggeration of any kind should be avoided. In preparing a general statement, one is prone to fall into exaggeration. When it comes to writing an introduction some advertising men can think only in superlatives and they fill their talk full of extravagant and bombastic assertions which are so obviously "stretched" that they ruin the effect of the advertisement entirely. This is unfortunately a very common practice. The tendency should be avoided above all others.

At the same time, the ad. writer should not go to the other extreme and sacrifice force and emphasis in order to avoid the error of exaggeration. A good introduction requires to be both forceful and emphatic. Tell the truth and tell it in as strong a way as you know how.

Study the Subject.

Before writing his introduction, the advertiser should consider the subject thoroughly and endeavor to pick out his strongest argument. Suppose, for instance, that it is in the spring-time and he wants to advertise paint. The appeal is to be addressed to the property owners. The strongest form in which the argument could be presented would be to show that paint was in the nature of an investment rather than an expenditure. Something to this effect would make a forceful and pointed introduction:

MAKE MONEY ON YOUR HOUSE.

"If you have a house to sell or rent, there is one sure way to secure a purchaser or tenant. Paint the house from top to bottom. It will look ten times newer, ten times cleaner and ten times more attractive. Paint will add a big margin to the selling value of the house or bring tenants promptly.

"If you don't want to sell or rent, paint the house anyway. It will add years to the life of the building."

Correcting a Habit.

In other cases it is not necessary to prove that the article in question is a necessity. This may be recognized and yet many people, through negligence or habit, may be without one. It becomes necessary in such cases to train the arguments on the particular form of negligence or the habit which keeps people from buying. Take the case of the lawn mower. Every householder needs a lawn mower, but a great many get along by borrowing from a neighbor. Clearly then, the hardware dealer who wants to sell lawn mowers to people who lack them should get after the borrowing habit. Something in this wise would be effective:

DON'T BORROW THAT LAWN MOWER AGAIN.

"When you borrow you place yourself under an obligation. The threshing noise the machine makes as you cart it back and forth advertises the fact to the neighborhood that you are too mean to buy a lawn mower of your own. Then, you can't get the machine every time you want it. Buy one of your own and save yourself all this inconvenience."

The "Sympathetic Chord."

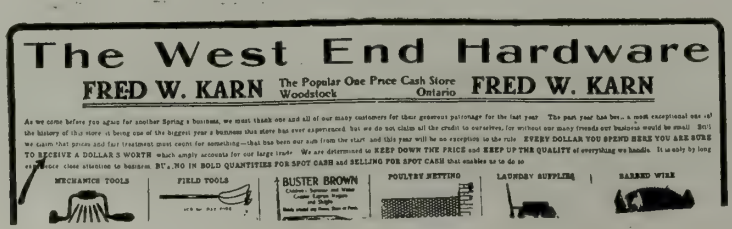
Success is assured the advertiser if he can strike what might be termed a "sympathetic chord." If the reader can thoroughly subscribe to what the advertisement says, he is in a mood highly receptive to suggestion. For instance, the amateur gardener finds before he has progressed far with his work that it is by no means easy. If his equipment is not complete, the labor is increased considerably. Suppose that he runs across an advertisement which begins something like this:

PLANTING A GARDEN IS HARD WORK.

"Unless you have the right kind of tools and plenty of them. In addition to that, you fail to get results in keeping with your efforts unless you have the necessary equipment. Best results can only be obtained by the use of the best tools."

His interest is aroused because he knows from experience that what the advertisement says is right. In addition, he feels that he needs more tools, that he is foolish to be without them.

Applying Emphasis.



There are cases again where emphasis should be the ruling characteristic of an introduction. When the fact, which the ad. writer desires to work on, is generally recognized but not as generally lived up to, he should present his arguments "right out from the shoulder." A hardwareman recently advertised gas ranges with effective emphasis, as follows:

SPARE COOK AND POCKETBOOK.

"It is necessary to have a gas range for use in summer time from the standpoints of comfort and economy. Cooking with coal entails much labor and discomfort on those who do the cooking. It raises the temperature of the house to boiling point and it uses fuel unnecessarily. With a gas range, meals can be cooked quicker, easier and cheaper. Gas roasts the dinner; not the cook."

A General Introduction.

Where the advertisement is of large size and devoted to a number of lines, it is necessary to prepare the introduction in a general way. In such cases, a talk on the seasonable nature of the goods offered or the superior service given at the store will prove effective. The latter plan was adopted by Fred Karn, of Woodstock, in writing an introduction for a full-page advertisement which covered the spring field pretty thoroughly. The accompanying cut shows part of the ad. including the introduction.

The West End Hardware

FRED W. KARN The Popular One Price Cash Store Woodstock Ontario FRED W. KARN

As we come before you again for another Spring's business, we must thank one and all of our many customers for their generous patronage for the last year. The past year has been a most exceptional one in the history of this store it being one of the biggest year's business this store has ever experienced. But we do not claim all the credit to ourselves, for without our many friends our business would be small. Both we claim that prices and fair treatment must count for something—that has been our aim from the start and this year will be no exception to the rule. EVERY DOLLAR YOU SPEND HERE YOU ARE SURE TO RECEIVE A DOLLAR'S WORTH which amply accounts for our large trade. We are determined to KEEP DOWN THE PRICE and KEEP UP THE QUALITY of everything we handle. It is only by long experience close attention to business, BUYING IN BOLD QUANTITIES FOR SPOT CASH and SELLING FOR SPOT CASH that enables us to do so

General introduction on service used for a full-page advertisement.

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 8 shows the method of developing the pattern for a hip bath.

Draw one-half the plan and space same off.

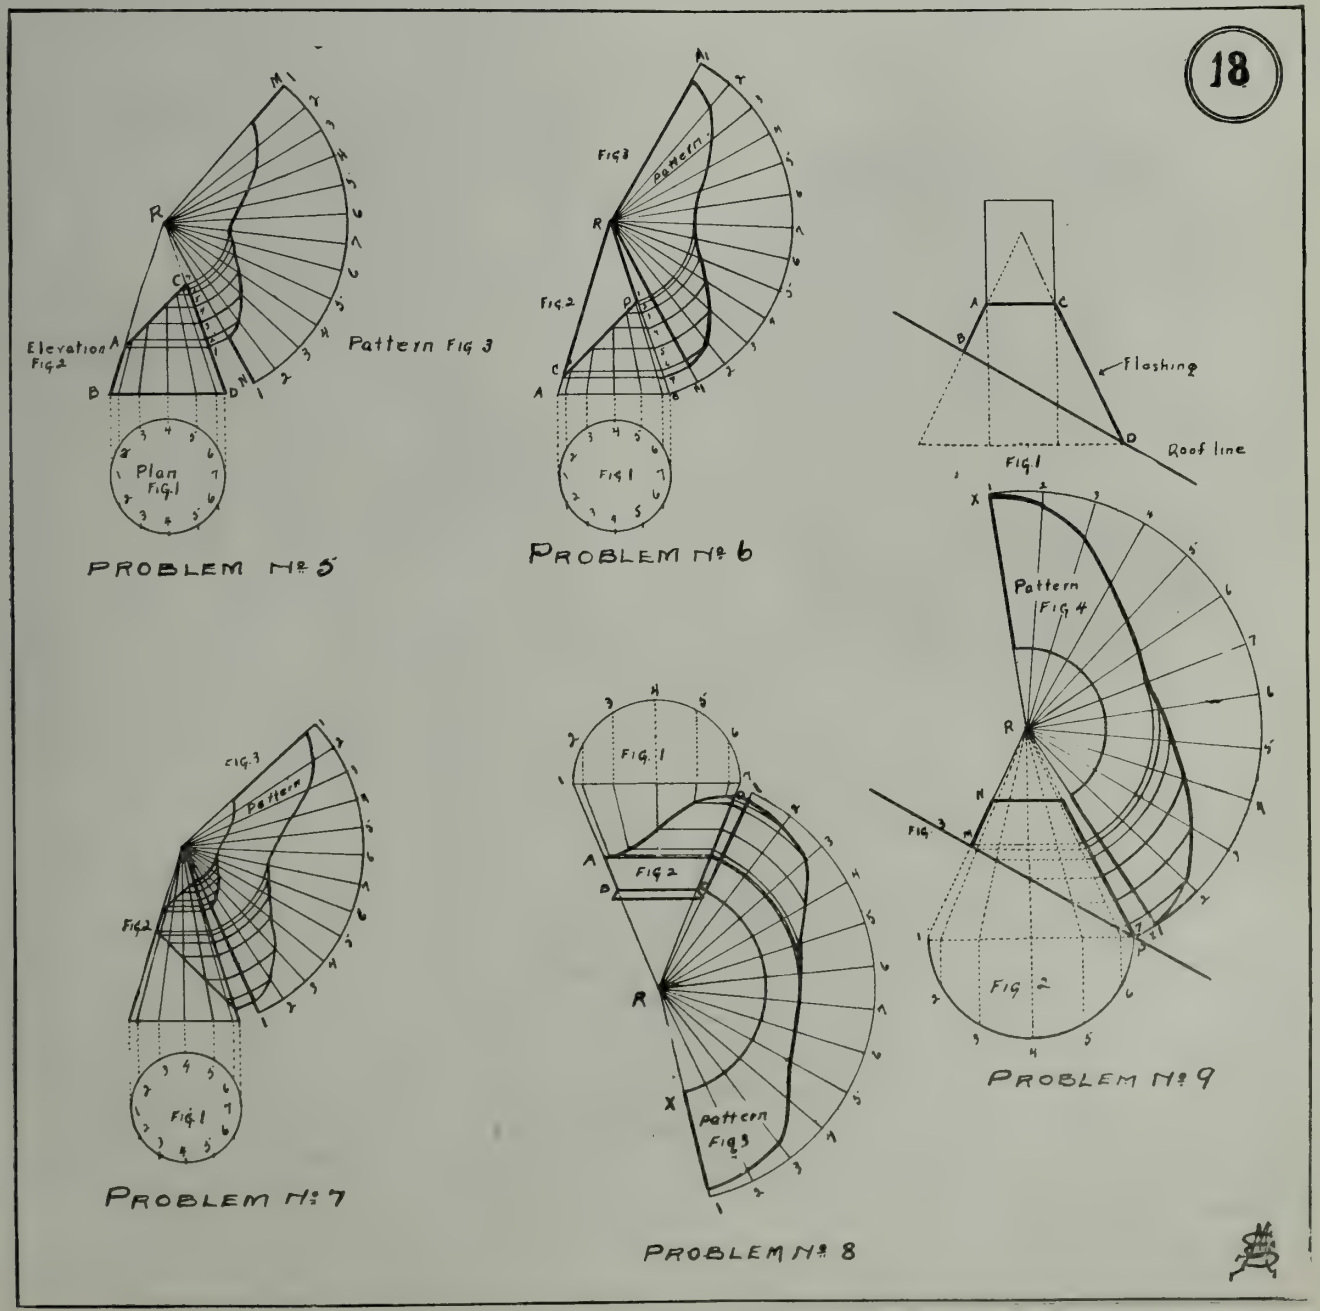
Then draw the cone as shown by the lines R. 1. and 7. Then draw the curved line A.D. representing the top of the bath, and the line B, C, the bottom.

Drop lines from the different points on Fig. 1 until they touch the base line 1 7. Then carry them towards the centre until they touch the curved line A D. Then parallel to the base line until they touch the line 7 R.

The pattern is then developed the same as prob. 5, the only difference being that the point 1, is carried to the line 7, the point 2 to the lines 6, etc., until all the points are intersected. But if the pattern had been laid out on the left side instead of the right then the different points would have been carried into like numbers. We make this change to impress the principle of the pattern upon such students as are apt to follow the instructions in too mechanical a manner.

Prob. 9 shows the method of developing the pattern for a conical flashing to fit around a pipe and against one side of an inclined surface.

The flashing being shown by A B C D, Fig. 1. The dotted lines being drawn to get the full measurement of the cone.



At any convenient place lay off one-half the plan as Fig. 2 and draw the full size cone as R P 1, Fig. 3, and the roof line M P.

Carry the points on Fig. 1 to the line L p, then into the centre R. With R as centre, and R P as radius describe the arc X X and lay off the stretchout, draw lines into the centre R. from each one of the points on the line X X.

Where the lines from Fig. 1 meet the inclined line M P, carry horizontal lines to the side R P.

Then with R as a centre swing a line from each of these points and cut the measurement line having the corresponding position.

If it is desired to have the seam on the narrow side, then develop the pattern on the left side of the elevation, and as previously explained this will bring like numbers into contact.

Lesson 14---Complete Course in Card Writing

Lettering That Has the Good Points of Roman, but With More Speed — The Ribbon as a Decoration — Getting an Easy Swing in Writing.

By J. C. Edwards, Copyright 1911.

AT the first glance one might say that this lettering is the same as the Roman slant or Italic style; but upon examination the difference is quite marked. In the first place, all spurs are eliminated and in every way possible the letters are formed with the object of promoting speed and giving a continuous or writing effect.

Speedier Than Roman Italic.

Considerable time is wasted in executing the Roman Italic, because of the spurs and the abrupt stops as in the "K," "W" and "V."

This style of letter is easily and quickly made and when properly written, each letter will be joined, giving the effect of continuous writing, and yet it is quite legible.

How the brush is held.

Getting the Easy Swing.

There is some knack in getting that most desirable free and easy motion in writing brush script. The brush must be held at the same angle always, and when the stroke is ended at the bottom line the brush should be quickly returned to the top ready to commence the next down stroke.

Practice will give you an automatic motion—almost mechanical. This is desirable, as it gives speed and confidence, which is readily seen in the finished work.

Continuous Stroke Letters.

There are several letters in this alphabet which, in making, there is no necessity to lift the brush off the card until the letter is completed. Such letters as "W" and "V" come under this head, also the "Z" if made as the small shaded letter without adding stroke four, as shown in the larger "Z."

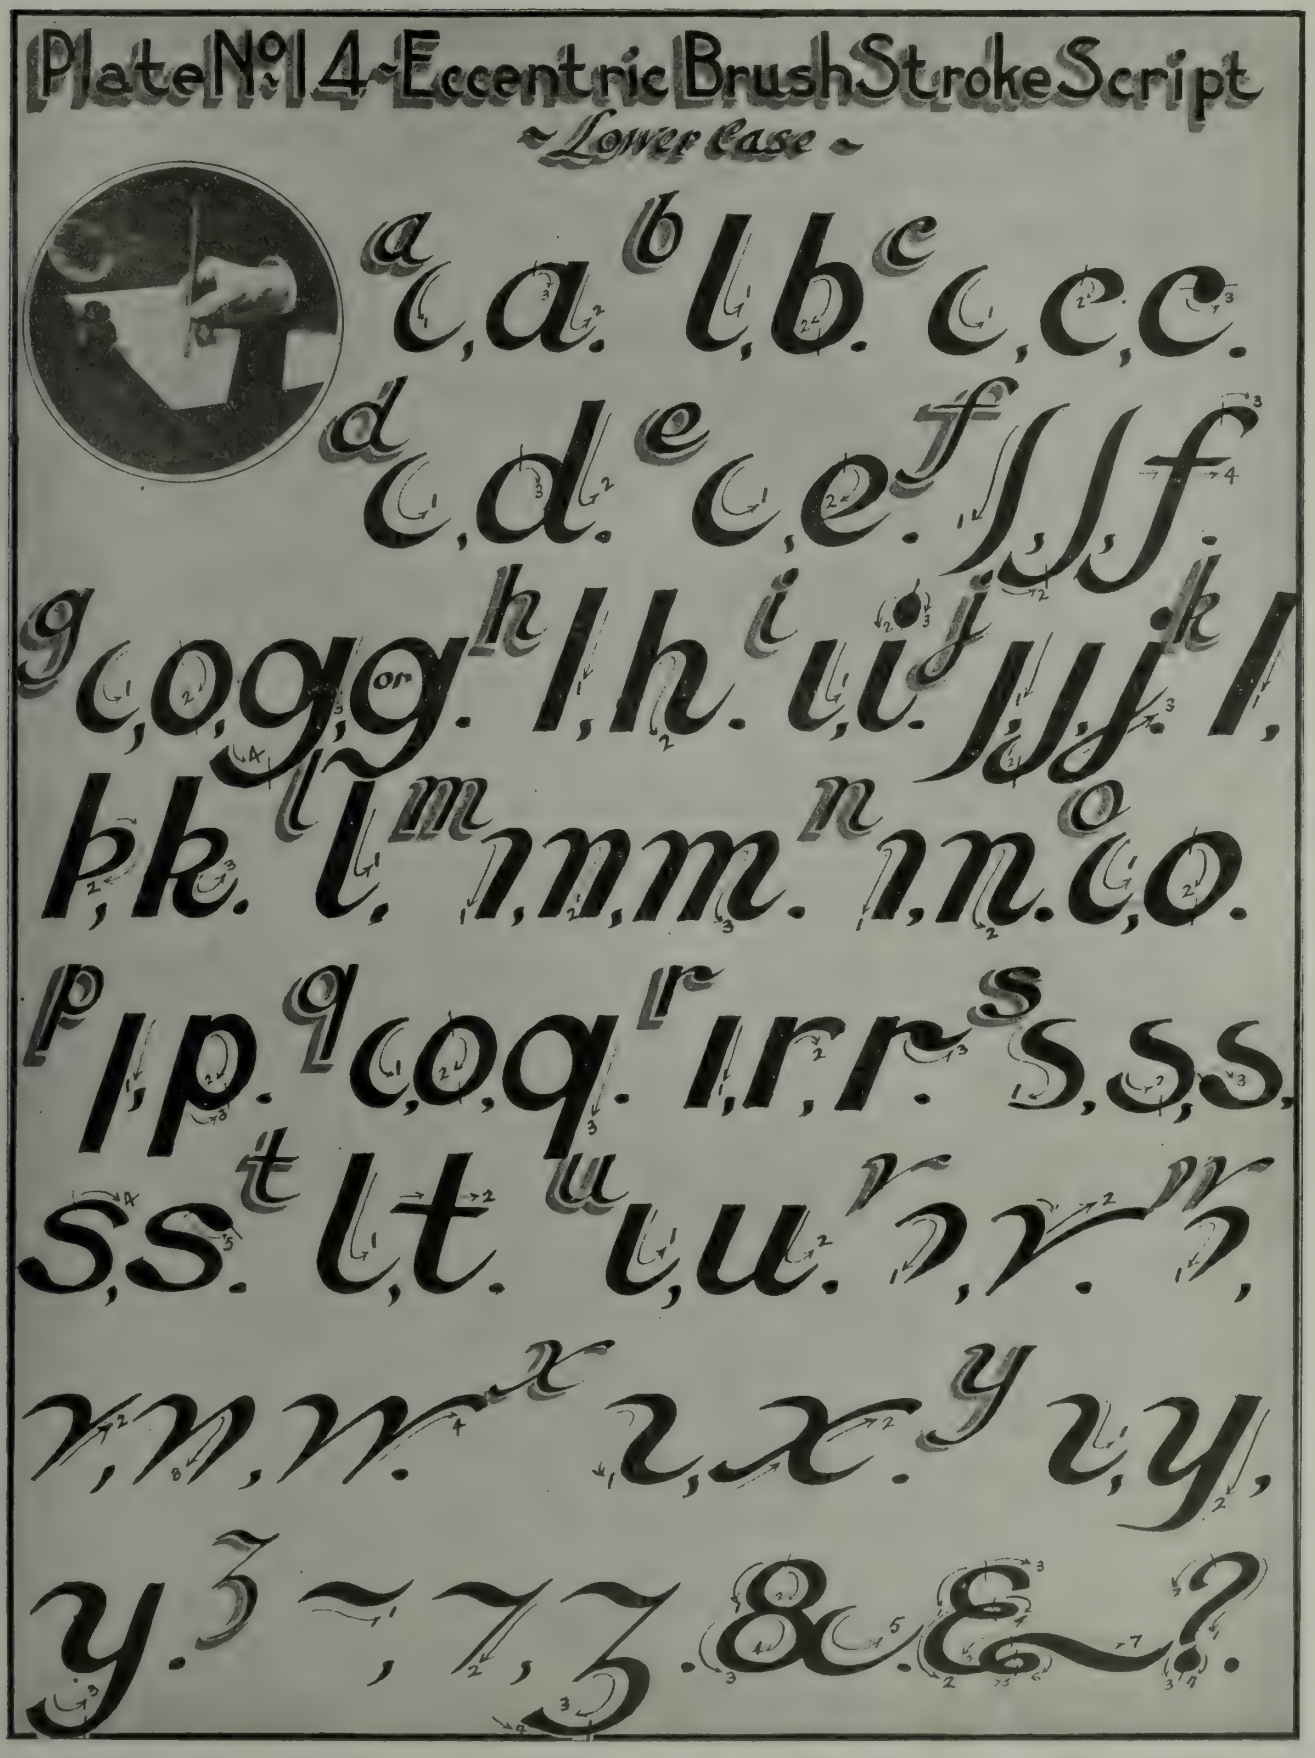
Practical Pen Lettering.

This style of lettering lends itself readily to pen work. The broad flat-pointed ("Soennechen") pens are used in various sizes according to the size of lettering you desire. For small tickets, a No. 2½ pen makes a very neat sized letter, while for larger card work a No. 1 or 1½ is not too broad. A great deal of practice is necessary to use these pens well, but when it is accomplished the result is very pleasing.

The Decorative Ribbon.

In making decorative cards the ribbon in a great many forms may be used to advantage. The simplest forms are easily made and are quite as effective as the more elaborate styles. The one illustrated in the card here shown is perhaps a little complicated, but is quite decorative and adds tone to the card.

Though Effective—Avoid.



You will notice that the lettering in this card overlaps the ribbon decoration and is practically lost, thus breaking the sense of the reading matter. This should never be seen in any card used on a display of merchandise. The ribbon may be made in a flat color or may be made in white shaded with some dainty tint and bearing the heading or the important inscription plainly lettered or shaded.

Card showing application of ribbon design and the brush stroke script.

Many forms of relief are resorted to in show card work. The card here shown gives one idea which is used to advantage behind a ribbon or panel. It is a grey silhouette, but may be made in black or, in fact, any flat opaque color.

Put this into practice, along with other ideas which you may see or think of, and note the various effects you can achieve with very little effort and which adds greatly to a fancy card.

This plate is descriptive of a letter that can be effectively applied to many uses.

Progressive Hardware Retailing

May Bros. Issue an Illustrated Folder—Getting Results From Advertising — Featuring Tools and Paints—Demonstrations Being Held.

ISSUE SPRING FOLDER.

West Toronto.—May Bros., hardware dealers, have issued a neat retail folder to their customers which they have termed "Seasonable suggestions in hardware." It contains illustrated descriptions of many lines now much in demand, such as screen doors, lawn supplies, carpet sweepers, paint, wall stains, washing machines, wringers, gas ranges and water heaters.

The folders are being sent out in wrappers which contain more advertising matter. On the front is the business slogan: "We carry a large stock—we give good values—and make prompt deliveries."

GETTING RESULTS.

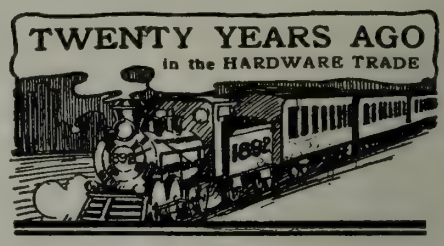
Ritchie & Allen, hardware dealers, of Okotoks, Alta., write to Hardware and Metal as follows:

"The last week in March, we offered through our local paper here a No. 22 single shot rifle and 500 rounds of 22 ammunition to the person bringing in the greatest number of gopher tails to our store in the month of April. You could hardly believe how this small investment increased our rifle and ammunition sales for the month. It created more talk throughout the country and gave us more good advertising than any other ad. we have ever published."

FEATURING TOOLS AND PAINT.

Peterboro, Ont.—The windows of the local hardware stores are featuring paint and tools.

The Peterboro Hdwe. Co. have a very fine carpenters' tools window display arranged by C. McGibbon. Every article is priced, and this alone gives a great selling boost. They have been holding a demonstration this week of interior stains.



The Kingan Hdwe. Co., have a garden tool window and also a paint and varnish display, causing many sales in those lines.

SHOWING HOUSECLEANING GOODS.

Montreal.—After moving day there is general house cleaning, and many hardware dealers, bearing this in mind, having prepared window trims of housecleaning necessities which are bound to draw sales. Mops, floor brushes and window brushes are being shown. So are dusters, brooms and dust layers. Some of the windows present a really striking appearance. It is not easy to use many lines and yet make the whole agree, yet this has been accomplished.

A "WINDOW CAMPAIGN."

St. John, N.B.—A clever illustration of the policy employed at the prevailing season with local hardwaremen may be taken from the window displays in the store of W. H. Thorne & Co., Market Square. The firm have a large frontage of windows, and it is fully appreciated and taken advantage of as a sales producer, for something appropriate is at all times featured therein which is intended to catch the eye of prospective customer. At present a lesson in the course adopted to feature seasonable goods may be taken from the windows both in King street and Market square. The baseball season is just opening and gives promise of being brisk and successful, and one window is devoted to an entire display of gloves, bats, balls, masks, and the various requisites of a ball team, cleverly shown. It is also known that the sporting season will be active with trout and salmon fishing before long, and another window is given up to an exhaustive display of all the essentials of the fisherman. The wants of the farmer and the gardener are attended to in another display window in which the numerous articles of value in amateur gardening, lawn preparation and farm life are shown to advantage, while in still another window are found the tools which are about to be brought into extensive use in the building, and projected development of the city. Those interested in housecleaning will find a window devoted to a display of "work-lesseners," patents, polishes, veneers, etc., of various kinds, as well as another window wherein are shown the many features in painting kept in stock, and the persons intending to improve the interior of their homes are easily satisfied with the showing in another window of pieces of bric-a-brac, ornamental fixtures, etc. The window display has been carefully thought out, and should prove of material assistance in the endeavor to "boost" the spring trade this year.

The following items were taken from the files of May 7, 1892:

"A novel and, as far as Canada is concerned, a new machine has just been brought out by the Cant Bros. Co., Galt. It is an automatic, hollow square chisel-morticer, capable of making mortices in hardwood, thus rendering it invaluable for car, carriage, wagon and furniture factories.

* * *

The spring outlook for trade in builders' hardware does not brighten for city retailers. The building trade is not in a condition to inspire confidence in capital, which is also timid on account of the reaction in real estate. A large number of builders have failed, many with heavy liabilities, and the list is lengthened every week. Not only do these failures auger ill for future business among local hardwaremen, but they fall heavily upon the present affairs of these traders."

Editor's Note.—Affairs are vastly different to-day. A record year is anticipated in building operations, and the sale of builders' hardware has already reached a large volume. Canada's present prosperity looks doubly great when contrasted with the conditions which obtained twenty years ago.

* * *

"Geo. McGiffin, of the hardware firm of McGiffin & Campbell, Miami, Man., has sold out his share of the business to A. Lawrence.

L. A. Brink, hardware dealer, Teeswater, has sold his stock to J. H. McHardy and R. W. McKenzie.

* * *

"Letters patent have been issued incorporating the James Stewart Manufacturing Co., of Woodstock, with a capital stock of $100,000.

Editor's Note.—The firm of James Stewart Manufacturing Co., ranks today among the best known of Canadian manufacturers of stoves.

Current News of Hardware Trade

To Erect Factory.

Montreal.—R. & W. Kerr Hardware Company, are planning to erect a factory this summer which will cost about $50,000.

To Hold Annual Dinner.

The Montreal branch of the Kingston Old Boys' Association will hold their postponed annual dinner at the Engineers' Club, Beaver Hall Hill on Saturday, May 11.

Becomes Manufacturers' Agent.

St. Thomas, Ont.—Geo. A. Ferguson, of the firm of Ingram & Davey, Ltd., has disposed of his interests in that concern, and will become a manufacturers' agent here. He will sever his connection on June 1.

Appointed Agents.

Henderson & Richardson, manufacturers' agents, 224 Board of Trade Bldg., Montreal, have been appointed agents for the Portland Mfg. Co., who are well known to the trade, as manufacturers of washing machines.

Building New Store.

Saskatoon, Sask.—Operations have been started by the Saskatoon Hardware Co. on second avenue on a new store building. It is the intention to build but one story at the present time but another will be added next year. The building will cover a space of ground fifty-two feet by one hundred and thirteen.

New High Water Mark.

Montreal May 8 at the Builders' Exchange here figures have been compiled which bear out the predictions so often made, to the effect that 1912 is to be a banner building year. Work now contracted for, and talked of, amounts to $50,000,000. Much of this, of course, will not be executed this year; but permits already issued, and contracts let, indicate that operations to at least a value of $30,000,000 will be completed during the next eight months within the bounds of Greater Montreal. This figure, which is a conservative estimate, establishes a new high water mark.

To Make Tools.

The Canadian Warren Axe & Tool Co., have been incorporated with head office at St. Catharines and a capital stock of $150,000. They will manufacture axes and other edge tools, peavies, cant hooks, mill hooks, logging and lumbermen's tools.

Hardwaremen Move Around.

Peterboro, Ont.—There have been several changes recently in the clerking staffs of local hardware stores. W. O. Labelle and E. F. Browning are leaving the Kingan Hardware Co. The former is going on the road out West for the Miller-Morse Co. of Calgary, and the latter is going to Niagara Falls, Ont. Mr. Gamble of the Peterboro Hardware Co., has gone West to the J. H. Ashdown Co., of Winnipeg. Ed. Latimer of Madoc, has joined the staff of the Kingan Hardware Co.

Personal Notes.

Lieutenant-Col. Robert Starke, of Starke-Seybold, Montreal, has been promoted to the post of Brigade-Major.

Business Changes.

Burford, Ont.—T. S. Rutherford, hardware dealer, has sold out.

Elkhorn, Man.—Graot Bros., hardware dealers, have gone out of business.

Toronto.—F. R. Jackson has taken over the hardware business of A. C. Graham.

Girvan, Sask — Douglas & Stewart, hardware and implement dealers, have sold their hardware stock to Geo. Hemme.

Webster, Sask. — Dingman & O'Connor, hardware and implement dealers, have dissolved partnership.

Winnipeg.—Geo. Stambler has opened a hardware store here.

Rapid City, Man.—Morley & Edwards, hardware dealers, have dissolved partnership.

Piapot, Sask.—A hardware store has been opened here by J. Bowie.

Laird, Sask.—I. J. Penner is starting in the hardware business here.

Churchbridge, Sask.—A hardware store is being opened here by G. S. Breedjford.

Craik, Sask.—R. J. McNaughton, who is in the tinsmithing business here, has added a line of hardware.

Carlyle, Sask.—G. W. Stockton has disposed of his hardware business to McRae & Dodds.

Calgary, Alta. — Frew & Fleming, tinsmiths, have opened a branch at Hillhurst.

Bawlf, Alta.—Paulson Bros., hardware and furniture dealers, have opened a branch store at Cadogan.

Bengough, Sask. — Wright & Root, hardware dealers, have dissolved partnership.

Rapid City, Man. — Moxley & Foerster, hardware dealers, have dissolved partnership. R. Foerster will continue the business.

Airdrie, Alta.—W. T. Rogers & Co., hardware dealers, have removed to Lackner.

Hardwareman Elected.

St. John, April 30.—A hardwareman, and president of the St. John Hardware Dealers and Manufacturers' Association, namely, Miles E. Agar, was elected this week to the office of commissioner under the new system of civic administration, in which voting took place this year for the first time. Mr. Agar polled a splendid vote and his friends are heartily congratulating him upon the honors bestowed upon him. He is recognized as a shrewd, clever business man, has at all times been interested in the promotion of civic affairs, has taken a keen interest in public matters, and is expected to prove himself a capable commissioner. In the elections, C. B. Allen, another hardware dealer, came within a few votes of being successful. He made a strong fight, and an encouraging one, and that he did not win is due to the strong canvasses made against the "Citizens' Ticket" with which he and Mr. Agar were connected. The other commissioners elected were: R. R. McClellan, H. B. Schofield, and R. W. Wigmore. James H. Frink was chosen mayor with a majority of only two votes over T. H. Bullock.

OPEN NEW BRANCH.

In order to give better attention and meet the demands of their largely growing trade in the West, the Pease Foundry Company, of Toronto, have recently formed a subsidiary company in Vancouver under the title of the Pease Pacific Foundry Ltd., with head offices at 324 Drake St., Vancouver, where a large stock will be kept.

The officers of the Company are:—President, D. J. MacKinnon, (also President of the Pease Foundry Co., Toronto, and of the Pease-Walden Co., Winnipeg); Vice-President, Jas. Gill, Secretary-treasurer, T. B. Medforth (formerly chief accountant Pease Foundry Co., Toronto); Sales Manager, Wm. Crane (formerly Superintendent Pease Foundry Co., Ltd.)

All British Columbia business will be transacted by this company, which will be of great advantage to their customers.

Stoves, Furnaces and Accessories

Get the "Extra Margin" of Stove Trade

Dealers Should Endeavor to Enlarge Their Output of Stoves in the Spring—A Suggestion for a Window Display—Stock Should Not be "Side-tracked" —Making the Most of the Gas Range Trade.

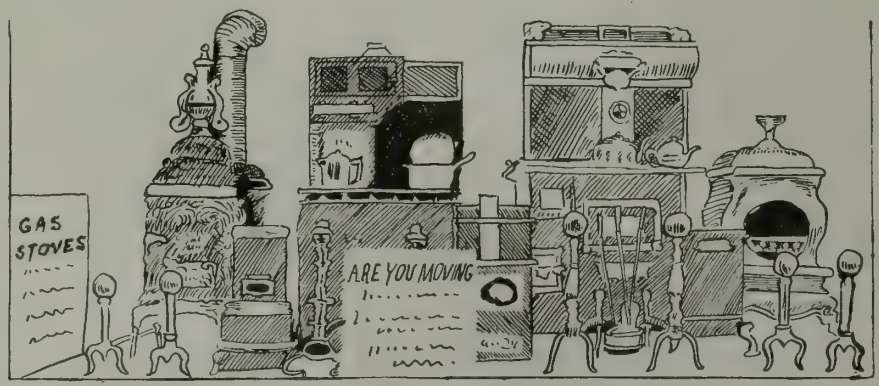
Somebody has said that success in business—or in anything else—depends upon securing what might be termed the "extra margin." It was pointed out that while the majority of men manage to use their working hours well, the man who finds how to profit by his spare time is the one who reaches the highest rung on the ladder; that, whereas most merchants can manage to work up a reasonably profitable trade, it is the dealer who can get a little margin on the others who can be termed the real success.

Pursuing this thought, it may be pointed out that, whereas any dealer can sell a certain number of stoves in the spring, he should endeavor to get the "extra margin," which can be obtained by the exercise of energy and initiative. As a matter of fact, dealers do not pay nearly as much attention to stoves in the spring as they should. They give their whole time to other lines more or less.

In the opinion of some of the most progressive dealers, the stove department can be made just as active in spring as any other branch of the business. There are two reasons for this. The first is that spring is moving time and there is more or less demand for new stoves on the part of people who are changing their quarters. The second is that the gas stove trade, which is growing literally by leaps and bounds, centres prettly largely in the spring.

The gas stove is now regarded as a necessity in all places where gas is obtainable. Many of the smaller towns do not possess gas plants, but the number is diminishing, and consequently new districts are being opened up for the exploitation of the gas range. In all cities, the demand for gas stoves has grown beyond belief in the last few years.

There are, however, many homes still which lack this great convenience. Cooking in summertime is done with a coal range. In addition to the fact that the housewife finds this method laborious and tiresome, it involves a greater expense than the use of gas. A live dealer could, if he made a determined effort, place a gas range in two-thirds of the homes in his section which lacked them.



The present is the time to make this effort. While a personal canvass would undoubtedly be effective, the writer is of the opinion that good advertising and adequate display in the store will prove all that is required. State the facts plainly—and often—in the papers. Give the stock a certain prominence in the store. And run good window displays. As much trade as the average dealer can conveniently handle will be worked up by such means.

The Stove Department in the Store of W. E. Brown, Strathmore, Alta.

A Suggestive Display.

The accompanying drawing shows a suggestion for a stove window display. It is, of course, a first essential that a window display of stoves must have simplicity as its main asset. The suggested arrangement shows an assortment of gas ranges, coal ranges, heating stoves, gas and oil heaters, fire sets and irons. The two large cards shown, one at the left hand side and the other in the centre, should be used for the presentation of facts and arguments about the stocks shown. If desired, the display could be made more elaborate by draping the sides and background with bunting, cheesecloth or some other light material. The floor could be laid with wood-lined stove board.

A Suggestion for a Stove Window—Various Kinds of Stoves, Ranges and Accessories are Shown.

The chief drawback to the success of the spring stove trade of many dealers is the fact that, with so many strictly spring lines of goods to handle, they allow their stove stock to become "sidetracked." The stoves are shoved into odd corners, obscured from view by piles of rakes, hoes and rolls of poultry netting, or are covered with a multitude of small articles. Sales are restricted as a natural result.

A view is shown of the stove department in the store of W. E. Brown, Strathmore, Alta. The stoves are kept free from all encumbrance and with sufficient clear space to make inspection of each article possible. It is a model department in many ways. Dealers who follow the example of Mr. Brown can depend upon securing the "extra margin."

Weekly Market Report---Stoves

ACTIVITY IN STOVES.

The stove market is showing every evidence of unusual activity. Sales at the present time are heaviest in gas, oil and gasoline stoves but there is also a healthy demand for coal ranges and heaters. The furnace industry has got away to an early start.

Montreal, May 9.—While it cannot be said that the demand for ranges is reaching the proportions of the great fall rush, there is nevertheless a big demand for stoves. But ranges are not the busiest line at present. Perhaps kitchen ware shows the greatest activity, though of late there has been a rush for such stoves as are needed at summer resorts. The warm weather is coming. People who spend several months away from the cities are moving now, and many of them are buying oil and gasoline heaters before they go.

Tin Rising, Tinware Steady.

Though tin has risen rapidly in price, there have not been any further advances in tinware. Iron is high, too, at the present time, which would tend to make an advance in tinware likely, were it not for conditions in the United States. For fear of competition from there the local manufacturers will hardly be able to further increase their prices even if the continued upward course of the pig metals should make this seem necessary.

Spring Goods.—The demand for tinware is keeping up. New households are being started. Emigration has already commenced. New kitchens must be equipped, and naturally those wishing to secure a stock come to the hardware store.

Waiting for Navigation to Open.

Shipping departments are being kept busy forwarding this class of goods to the retailers. Some there are who are delaying placing their orders until river navigation is again in full swing, but many who are not waiting for this, are willingly paying the higher freight exacted for transportation by rail.

Gas Stoves.—The same causes which create a demand for kitchen ware create also a demand for gas stoves. True, the emigrants do not clamor for this "energy and time saver," but in the new town and city houses gas stoves are wanted.

The sales have been so heavy that the manufacturers have had some difficulty filling the orders as promptly as they were wanted.

But of ever greater volume has been the demand for coal oil and gasoline stoves. Either more summer homes are being opened, or more people are becoming educated to the use of oil stoves. Perhaps there is something in both these reasons, but it would appear that popular education has had most to do with creating the present demand. Farmers' wives have come to see that while they are denied gas they may secure many of its benefits by securing a gasoline or an oil stove. Those who have no gas connections in the city are also buying.

Many Furnaces Selling.

Ranges, Heaters and Furnaces.—A surprisingly large number of furnaces are being sold now—thanks to the unusual building activity of the winter. New houses, when completed in spring, must have furnaces installed then, if they are to be sold before fall.

Heaters are not in any real demand. An odd stove is sold now and then to someone who wishes to be able to heat his summer home of a chilly evening, but really heaters are hardly worth mentioning. But they will be in a few months. Against that time the manufacturers are continuing production.

Ranges are moving well. In all districts these are being bought, and the hardwaremen who carry this line cannot afford to be without a good assortment.

TORONTO.

Toronto, May 9.—The stove industry is showing exceptional activity for this time of year. Although it is not usual to sell heaters and ranges in large numbers at this season, most of the manufacturers are doing so now. In addition, the gas stove trade has grown to such proportions that the manufacturers are finding the demand rather more than they can handle. Altogether, therefore, the market is so busy that there is every reason to believe that the year's trade will break all records.

Stove manufacturers are still hampered by the unsatisfactory transportation conditions. Deliveries have been slow and there have been some complaints on that score.

Gas Stoves.—The number of stoves sold has been larger by quite a margin than in any previous year. The biggest rush is now on and large orders are being placed. "We have dealers on our list who are selling five and six gas ranges a day," said one manufacturer. "The demand is far ahead of last year. We find that the bulk of the demand is from the cities but there has been an increase in the call from the towns and smaller places."

Bigger Increase Here.

Oil and gasoline stoves.—There has been a larger increase, however, in the demand for oil and gasoline stoves. People are already moving to their summer homes and are taking along an oil or a gasoline stove. The prejudice against gasoline stoves seems to be pretty well abated. People now do not fear that they are dangerous and the sales are growing rapidly.

Ranges.—There is a healthy demand for coal ranges. The manufacturers report that there is a steady outward movement and the demand is pretty well distributed through all sections.

Heaters.—There is not as large a demand, of course, for heaters but each day brings its quota of orders just the same. Small lots are being shipped out.

Furnaces.—Here again there is a good movement noted. The building operations in all sections are on so large a scale this year that the furnace industry is assured of a very busy year. Already a great deal of work is being done. In this city the builders have been at work practically all winter and there is, as a result, plenty for the furnacemen to do already. Sales are reported to be good.

Weekly Market Report --- Metals

METALS ARE STRONG.

The dominant note in the metal market is strength. Tin has been selling at unprecedentedly high prices although the former level has been reached again now. Lead is exceptionally strong and an advance has been made in sheets. Copper weakened early in the week but at time of writing has strengthened up again.

MONTREAL.

Montreal, May 9.—Again there are changes in good numbers to report, and all in an upward direction. Copper, technically, has weakened somewhat, but as far as the Canadian market is concerned, at least, the demand for the metal is so steady, and the supply so limited, that a lower figure is out of the question. It would appear, indeed, that the lower tone in London and New York will be of but short duration.

Tin has seen the greatest jump, but lead, too, has kept on its upward way. True, the pig has not been further increased in price, but sheets have leaped forward. Solder, too, has moved. Upward, ever upward, is the general cry. What the future will be is a matter of some conjecture. There does not seem much reason to look for lower figures on any of the metals—that is in the near future. Iron, indeed, would seem likely to go much higher, while tin and lead also seem likely to take a further advance.

What Next in Tin?

Tin.—It is not long ago since it was found necessary to advance the price of tin from $48.50 to $49.50; but now comes a further and larger advance. This week conditions have become such that there was nothing for it, but to raise the prices on Lamb and Flag and Straits to $52.00. A jump of 2½ cents a pound.

Local scarcity is only one reason. The other, and more important cause, is the scarcity of future supplies. The reserve seems exceedingly small.

The local supplies, it should be said, have been replenished this week by a shimpent from England. Much of this was bought from the dock, however, and the remaining amount is not sufficient to glut the local market.

Copper.—The decline on the primary market is a little hard to explain, for the demand still keeps up and supplies are said to be none too large. Locally the market is firm. There is no probability of a revision downward. A movement in the other direction, however, does not seem very likely now.

Spelter More Plentiful.

Spelter.—Stocks have improved. Some delayed cars have arrived, and now all that is wanted can be had. Prices remain steady.

Lead.—Here the price increases have been numerous, though not very large. It is not lack of stock locally which has brought about the change. Early shipments have resulted in the local market being well supplied, but since the handlers have had to pay more for the metal, they are naturally compelled to make others pay more for it. Sheets have been raised from 30 to 35 cents per cwt., thus following the advance in the pig.

Lead pipe and waste has not been further advanced, but solder has been set at a higher figure. Bar, half and half, is now quoted at 27c instead of 26½; while wiping is quoted at 24c instead of 23½c.

Iron.—For a long time this has been the steady metal, but there is no denying that iron is now on the rise too. There have been no increases in price locally as yet, which just means one thing—namely that this is a good time to buy. The advance can not be long in coming. One of the straws which show the way the wind blows was seen this week. One of the large local buyers sent in an order for a good supply. They expected the old price, but got back word that a shilling more would have to be charged.

TORONTO.

Toronto, May 9.—The metal market has been featured by sharp advances and declines during the past week. The situation has altogether been unsettling but matters have steadied now, leaving prices where they were at last writing.

Business is brisk all around. Demand is heavy and, as there is still a scarcity of metals, the situation has become a little strained in places. It is particularly difficult to get hold of any spelter, although the shortage in this metal is not as complete as it was a couple of weeks ago; at which time, in fact, the market was absolutely devoid of spelter.

Tin Up and Down.

Tin.—The course of tin during the past week has been marked by rapid fluctuations of a steep nature. Early in the week tin went up sharply on the primary markets and, had the local price been modelled on London quotations, it would have reached the unprecedented level of about 53 cents. However, tin has steadied down at time of writing and is now being quoted around 50 cents. The demand is strong.

In this connection it is interesting to note the following comment in the American Metal Market: "The Straits output promises no increase, and as there is no question but that the consumption of the world for tin is steadily increasing, this question of output becomes a serious one, and is the basis for the belief in higher prices that exists in the best informed quarters."

Copper.—It has been the other way around with copper. The price declined earlier in the week but is now up again to the same level as last week. Confidence in copper was a little weakened by the declines but is now being restored as it seems fairly certain that the price will be maintained. Demand is good here.

The condition of copper in the United States does not seem quite as satisfactory. The American copper trade has been at a complete standstill as regarding business for some time. The statistics to-morrow will probably give some indication of the condition of production and American consumption and may start some new business.

Lead is Strong.

Lead.—While no changes have been made in local prices, there is a very firm tone to lead. Stocks are still light and promise to remain so in the face of the heavy demand which is steadily maintained.

Spelter Still Very Scarce.

Spelter. — The outstanding feature about spelter is the great scarcity. While it is now possible to secure some spelter, it involves great difficulty, and trading, as a result, is by no means active. The price remains the same.

Plates and Sheets.—The situation is quite satisfactory. Demand has been large and supplies have been coming forward to meet it. The tone is healthy and prospects point to a continuation of brisk trade right through the year.

REACH RIGHT READERS.

"Please accept our thanks for the applications received that were forwarded to us this a.m., and yesterday. We are in turn sending them on to our customers. It certainly looks as though your paper reached the right class of readers."—Lewis Bros., Limited, Montreal.

Weekly Market Report --- Hardware

FEATURES OF MARKET.

The hardware market has been featured by the heavy demand in nearly all lines. This is particularly true with regard to refrigerators. Dealers are ordering early to insure fdll shipments, the scarcity which existed last fall being the cause.

Although no price changes have been reported, there is a tendency toward firmness noted. The hardware situation is more interesting at present than it has been for some time.

MONTREAL.

Montreal, May 9.—While there have been no price changes this week, price lists are still being altered, all the brass goods not having been advanced immediately upon the decision that a ten per cent. increase in price would be needful. Only certain classes of brass goods were raised in price last week, but the others have followed naturally.

What will be the future of brassware is not quite certain, since the price of the ingot metal has dropped slightly during the past few days. There seems little likelihood of a lower level coming, however. The present decrease in the ingot metal is slight to begin with, and seems only in the nature of a temporary change.

In all lines ordering is reported large. Especially is there a strong demand for harvest tools and contractors' suppplies. Both are to be expected at this season.

There is still some trouble being experienced with securing proper transportation. But river navigation is now open, and relief will come as a result.

Spring lines. These are undoubtedly the leaders at present. Lawn and garden tools are moving rapidly. The retailers hardly seem able to keep ahead of the demand. Swings, hammocks, and lawn furniture generally are being ordered daily. This is a line which has been developed greatly during the past few years. Hundreds of up-to-date retailers are making big profits out of this class of goods. The low prices now asked for these makes a large number of sales possible.

Hay forks, pitch forks and rakes are wanted by those who conduct business in the farm communities. It is a little early perhaps for retail selling, yet immediate delivery is being asked.

Kitchenware.—There seems some expectation that tinware will rise in price before long. Doubtless the high price of pig tin has given rise to this belief, yet it must be remembered that tin is not the material most used in tinware. At present it does seem that an advance may be expected, but it will be because of the price of steel as well as the high level to which tin has attained.

Brass goods are selling rapidly, in spite of the higher prices recently struck. For kitchenware of all kinds there is now a genuine demand, and the wholesalers and manufacturers are having some trouble shipping as promptly as their customers would like.

Builders' Hardware.—The advance in brass and copper has not as yet exerted an influence upon the various forms of builders' hardware in which these materials are so largely used. That these will be raised in price seems inevitable, however. Perhaps it is the realization of this which is producing such heavy buying at present. In all parts of the country orders are being written.

Contractors' Tools Wanted.

For contractors' tools, too, such as spades, picks and scoops, there is a heavy demand. The promises of a heavy building year are being borne out, and contractors are finding great need for tools.

Cement.—Again there has arisen a big demand for this material. Partially the demand comes from the contractors, but a great deal is also being bought by the farmers, who are coming more and more to see what improvements they can themselves make by the use of this material.

Sporting Goods.—The retail sales are now exceedingly larger — a fact for which the improved weather must be largely thanked. Goods are being displayed wisely, and the natural result is heavy ordering.

TORONTO.

Toronto, May 9. — The numerous changes which have been made in hardware lines recently have resulted in awakening a considerable degree of interest. Dealers are beginning to "sit up and take notice." They are watching the market with more interest than for some time back.

The situation is undoubtedly an interesting one. There is a strong tendency toward firmness noted in many lines and further advances would not cause any surprise. This is due in some cases to the fact that demand has outstripped the supply; in others to the tendency of the market to readjust itself. The latter was the case in regard to cotton goods which were advanced 10 per cent. last week. Prices previously had been too low and the advance had been anticipated for some time.

There have been no price changes since last writing except that the 10 per cent. advance in brass goods has been made general. It now applies to practically all lines.

Business is extremely good. The local jobbing houses are rushed with orders at the present time, demand being spread pretty evenly over all lines.

Seasonable Goods.—There is a steady call for spades, hose, rakes, sprinklers, lawn mowers, wire netting and the many other lines now largely in demand in the stores. Business has been persistently good in this department. The number of repeat orders being received indicates that the trade of the retailer is brisk and steady.

Household Goods.—The feature of the market, perhaps, is the demand for refrigerators. Despite the fact that the weather has been far from warm this spring the demand started much earlier than usual. This was probably due to the fact that last year dealers experienced considerable difficulty in getting their orders filled. In order to escape this, they have been stocking up earlier. "I estimate that we have sold more already than we did all last year," said one sales manager to-day. In view of the fact that last year saw the biggest demand for refrigerators experienced up to that time, the present size of the demand will be appreciated.

While no scarcity has yet been felt, it seems a moral certainty that, as the season advances, the demand will outstrip the supply.

Other household goods are in active demand.

Builders' Hardware.—The demand is still growing. Dealers are already ordering in large bulk and the number of repeat orders coming in indicates that there is a good business being carried on with the public despite the comparatively early season. Travellers report that, with the amount of building in sight throughout the province, the demand will be very large all summer and fall.

Heavy Hardware.— Business is brisk. Deliveries have been satisfactory in practically all lines.

Sporting Goods.—Sales are heavy in sporting goods. The opening of the baseball leagues has revived interest in that sport to such an extent that the demand for balls, gloves and bats has become very heavy. Dealers are now stocking up briskly in these and all other lines. Canoes and paddles are reported to be selling well. Trap-shooters' supplies, rifles and ammunition are selling in better volume now.

Weekly Western Market Report

Record Trade in Builders' Supplies—General Trade Outlook Excellent—Rapid Increase in Building Permits.

Winnipeg, May 9.—There is a good seasonable demand for all classes of general hardware, and a very brisk movement in all lines of builders' supplies. This will be readily understood when it is stated that Winnipeg permits jumped $1,000,000 in two weeks, and now exceed $5,000,000, a record for the first four months of the year.

Some anxiety is felt as to threatened labor troubles in the building trades in the province of Saskatchewan, where painters are on strike and other unions are very dissatisfied with the maximum wage scale as announced by the Association of Builders' Exchanges.

Navigation is now open on the lakes, and some reduction in prices of heavy hardware will probably be announced shortly, following the cheaper freight rates by the lake-rail route.

The result of the work by the railroad commission in investigating freight rates is being watched with much interest here, and adjustment more equitable to the West is looked for by Western business men.

Wheat is very strong and the advance in prices during the past week will add much to the spending power of the West, where there are many millions of bushels yet to market.

Never was the general outlook in the West more generally satisfactory than to-day. Wheat seeding has made wonderful progress and will be finished by May 1 in the majority of districts.

The soil is reported to be in perfect shape for germination, and fields are already green in many localities.

Fine weather has given a decided boost to certain lines, notably gas ranges and oil stoves, and camp cooking outfits. Every year sees a larger number of people take up their summer residences along the river banks and groves in temporary bungalows. The supplying of outfits especially adapted for such style of housekeeping is becoming every year a more important line of busines to the hardwareman.

Winnipeg Hardware Quotations.

Ax Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.95; p.g. oak, $2.90.

Augur Bits—"Irwin" bits, 47½; other lines 70 and 10 per cent.

Barb Wire.—Lyman 4 pt., $1.85 f.o.b. Fort William; $2.26 per spool of 80 rods f.o.b. Winnipeg; Guidden 2 pt., $1.75 f.o.b. Fort William; $2.12 per spool of 80 rods f.o.b. Winnipeg; Baker 2 pt., $1.73 f.o.b. Winnipeg; Waukegan, 2 pt., $1.74 f.o.b. Fort William; $2.12 per spool f.o.b. Winnipeg; Alberta 2 pt., $1.73 f.o.b. Fort William, $2.05 per spool, f.o.b. Winnipeg; American special, 2 pt., $1.45 f.o.b. Fort William; $1.73 per spool f.o.b. Winnipeg; plain twist, $2.80 f.o.b. Fort William, $3.20 per 100 lb., f.o.b. Winnipeg; coil spring wire, No. 9, $2.07 per 100 lbs., Fort William; $2.50 at Winnipeg.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3; small lots, 2½; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.25; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $15.

Blocks—Steel, 50 per cent.; wood, 60 per cent.

Cut Nails—$3.15 per keg base.
Wire nails, base, $2.80 Winnipeg; $2.35 Fort William.

Copper—Sheet and planished copper, 30c per lb. Tinned, 24c. Copper wire, 3-inch gage, 24c, to 20-inch gage, 29c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corrugated iron, 28 gauge, $3.87; 26 gauge, $4.18; pressed standing seamed roofing, 28, painted, $2.84; 26, $3.24.

Canada Plates.—Half-polish, 6 and 7-inch, $3.40; 8-inch, $3.60; full polish, 6 and 7-inch, $4.25; 8-inch, $4.50.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 5; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron—Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 6, $4.20; 28, $4.60; 30 gauge or 10¾ oz., $4.80; Queen's Head, 20, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Iron Pipe—⅜ in., $3.25; ½ in., $4.05; ¾ in., $5.00; 1 in., $7.20; 1¼ in., $9.80; 1½ in., $11.80; 2 in., $15.30.

Galvanized Ware.—37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.90; No. 2 and larger, $4.65; snowshoes, No. 0 to No. 1, $5.15; No. 2 and larger, $4.90; steel No. 0 to 1, $5.35; No. 2 and larger, $5.10; featherweight, $6.50.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $2.75; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50, 5 and 5 per cent.

Hinges—Light T and strap, 65 per cent.

Hooks—Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 40 per cent.; smaller lots, 35 per cent.

Iron Pipe, Black—⅛ in., $3.15; ¼ in., $2.30; ⅜ in., $2.35; ½ in., $3.15; ¾ in., $3.80; 1 in., $5.45; 1¼ in., $7.45; 1½ in., $8.95; 2 in., $11.55; 2½ in., $18.40; 3 in., $24.15; 3½ in., $32.25; 4 in., $36.75; 4½ in., $42.50; 5 in., $47.50; 6 in., $61.50; 7 in., $95.50; 8 in., $118.

Logging Chain—¼ in., $7.50; 5-16 in., $6; ⅜ in., $5.50.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead.—$4.75. Lead Pipe—$5.85.

Lead Waste—$6.85.

Rivets and Burrs—Iron rivets, 55 per cent.; copper, No. 8, 30c; 10, 32c; 12, 34c; copper burrs, No. 8, 40c; 13, 43c; 12, 46; copper rivets and burrs, No. 8, 31c; 9, 32c; 10, 33c; coppered, No. 8, 17c; 9, 17½c; 10, 18c.

Rope — Sisal, 8¾; Pure Manilla, 10½c; British Manilia, 9c,; lath yarn, 9¼c.

Staples.—Bright wire, $2.50 F.O.B. Fort William; $2.90, Winnipeg.

Steel Squares—40 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 6 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—Half and half, $28 per cwt.

Screws.—Bright iron round head, 82½ and 10 p.c.; flat head, 87½ and 10 p.c.; round head, brass, 72½ and 10 per cent.; flat head brass, 77½ and 10 per cent.; coach, 65 per cent.

Staples—Bright wire per cwt., $2.50 at Fort William, $2.90, Winnipeg.

Paints and Oils.

A very brisk trade in paints, oils, varnishes and decorators' supplies of all kinds is now being done, and prospects are bright for a first rate season's business. Prices remain firm.

Linseed Oil.—Raw, per gal., $1.00; boiled, per gal., $1.03;

Turpentine, per gal., barrel lots, 80c.

Dry Colors.—White lead, lb., 7c; red lead, kegs, $6.50; yellow ochre, in barrel lots, 2½c; less than barrel lots, 3c; golden ochre, barrels, 3½c; less than barrels, 4c; Venetian red, barrel, $2.50; less than barrels, $3.00; American vermilion, 15c; English vermilion, $1.00 per lb.; Canadian metallic oxides, barrel lots, 3a 3½c; English purple oxides, in casks, 3½c; less quantities, 4c per lb.

Methods of Retailing Paints and Varnishes

The Great Need for Paint Advertising

People Do Not Fully Appreciate the Possibilities of Paint—Dealers Should Do All in Their Power to Spread the Knowledge by a Liberal Use of Printers' Ink and by Other Methods of Advertising—What Some Hardwaremen Are Doing.

There is probably not one dealer in a hundred who would dispute the truth of that statement, which is fast becoming an accepted axiom, "It pays to advertise." But is there one in a hundred who applies it intelligently to the conduct of his paint department?

There is a wide field for the advertising of paint. Besides the ground which the dealer covers in boosting the particular make of paint he is carrying, behind the competitive side of advertising, there is the great opportunity offering to talk the need of paint—not any particular brand, but just Paint. The truth of the matter is that people do not fully appreciate Paint; they do not understand its protective and preservative qualities, nor have they a complete appreciation of its decorative possibilities. Some men—their number is legion—allow their property to go to rack and ruin when a few dollars a year spent in paint would ward off the devastating effects of time. The appearance of rooms is spoiled by blotches and discolorations, because people have not awakened fully to the fact that a tin of paint and a brush, together with the utensils recently put forward, can effect wonderful transformations.

There is no blinking the fact that people do not appreciate the full possibilities of Paint. There is only one way to remedy this condition of affairs and that is to advertise. The word advertise has a wider significance than the meaning usually attached to it. Advertising is not limited to the use of newspaper space; it includes window displays, good display methods in the store, talking to customers and so on. For the time, however, attention is to be devoted exclusively to the one branch of advertising—newspaper publicity. For the purpose of spreading knowledge on the score of paint, it can be made a very potent force.

Is Retailer Doing Share?

The manufacturer is doing his share of the work. Publications with national and international circulations carry a large volume of advertising, telling the story and explaining the many uses of paint and varnish. Attractive posters and billboards are to be seen on all sides, conveying the same message. But is the retailer doing his share of the advertising?

The writer knows a prosperous hardwareman who had built up a big business largely on the strength of the good advertising he he has done. And yet he never advertises paint. When taxed with this fact once, he found some difficulty in explaining just why he omitted paint. "The truth is, I haven't thought much about it," he stated. "I have so many other lines to advertise. Then the demand for paint is pretty much of a staple quantity—and there's so little you can say about paint anyway."

There are scores, even hundreds, of dealers who still think the same way, who are laboring under the impression that "there's so little you can say about paint, anyway." Wonder if there are as many dealers who have grasped the truth that there is so much to be said about paint that the only difficulty is to find the space and the time to say it?

It is gratifying to note, however, that more dealers are advertising paint now than has been the case in the past. The writer has before him a grist of advertisements now being used by Canadian hardwaremen, all devoted exclusively to the subject of paint. The retailer is making a more determined effort this year, we believe, to hold up his end in spreading the gospel of paint and its possibilities.

Under the heading "Springtime is painting time," the Gravenhurst Hardware Co., Gravenhurst, Ont., have an attractive advertisement, in which the public are admonished to "protect and beautify your home by using high-grade paints."

Unique and effective paint display in the store of the Lawrence Hardware Co., Revelstoke, B.C.

The Bond Hardware Co., Guelph, have been conducting a demonstration of stains and varnishes and have been devoting their full advertising space in the newspapers to boosting this event.

P. S. Stewart & Son, Renfrew, are running a forceful talk on the importance and economy of painting buildings to protect them from the wear and tear of the weather.

Gardner & Co., Woodstock, are advertising paints as a means of improving and beautifying the house and grounds in spring.

The list might be continued indefinitely but the above are fair samples of what an enlightened percentage of dealers are doing to increase the public's belief in the utility of paint.

The time will come, in all probability, when all dealers will adopt this course. The future development of the paint industry will be greater than might at present be deemed possible. Comparatively speaking, men only dabble with paint now; in the future, they will "use" it. The future will see the value of paint fully recognized and the demand will increase accordingly.

In the meantime, the retail dealer should do all in his power to bring about that condition of complete public understanding.

Using Paint for Straw Hats as Bait

This Attracts the Women, Who Are Liable to Buy Other Lines —The Specialty Brings Good Profits Itself Too—A Valuable Sideline.

From time to time people may be heard conversing about some special sale which is then being held in a department store. "I don't see," one will say, "how they can possibly afford to sell these goods at that price. I don't see where they make any money."

It is quite possible that there is no money being made by selling these lines. They may be just bait—just a special line displayed to attract people to the store. This is the principle of many department store sales. The management determines to sell a certain line at a figure so low as to preclude the possibility of any real profit. The goods may bring a small amount more than they cost, but certainly the margin will not be enough to provide for rent of floor space, payment of clerks, and other overhead expenses. If all lines were sold this way the business would go steadily behind, until the final crash came. But all departments are not run this way. There are a few "leaders" selected. These are marked away down, and are widely advertised. People come by the score to buy them, and they remain to buy other things which have been arranged to attract their attention, and which offer the management an ample profit. It is from these other lines that the profits are made.

No Reduction Sale.

Undoubtedly, it is good business to use one class of goods to draw people to the store, so that they will see others and be led to purchase them. But a special sale is not the only way this may be accomplished. A Montreal merchant is using a somewhat different system at this present minute. He is using a paint specialty, which he is not selling at ununusually low figure, but which is attracting a desired class of custom because it meets a real need of the desired class of customers.

Every hardware dealer realizes the value of getting women to his store. A man is good to deal with. He usually comes for something, gets it and goes away. What he sees will undoubtedly influence him, but he is not half as likely to be led to make any unplanned purchases as a woman. She, once in the store. will see several things which she needs. She will buy them too.

Bait Not Costly.

So it is particularly worth while attracting women inside, and this is what this Montreal dealer is doing. His bait, moreover, is not costing him anything. It is rather yielding him a good profit. He is simply using a display of paint which can be used on straw hats.

This is the season when straw hats are coming into style once more. The last season's creations have now been brought out. Most of these have fallen into disfavor, their owners deciding that they simply must have a new hat. But that new hat once purchased they will be willing and anxious to make such changes in the old straw that it, too, will look like new. The straw paint, or enamel—it goes by both names—makes this possible. So the display in the window is attracting attention. Young girls are drawn as well as women who are seriously engaged in the work of running households. The girls are not as good customers as the women—they are not likely to see any other line which they feel they must buy. But they do buy the straw paint, and thereby the dealer reaps a good profit. The women, however, get not only the paint. but they also look about the store. They see the garden tools, the pots and pans, the cutlery. They see picture wire and thumb tacks. They see domes of silence. They are sure to see something beside the paint which they want. Moreover, while they came in for paint for straw hats, they notice also paint for other purposes. Good salesmanship will result in these other lines being sold, for the women readily appreciate the need of applying a fresh coat either inside or outside their home.

Only a Small Display.

This paint for straw hats has proved a splendid line for one dealer. It has brought him profits and brought him trade which he would not otherwise have secured. And all this he has achieved by merely arranging an attractive display in one part of his window. He did not give the whole show space to this particular kind of paint. That might not have been wise. He merely showed the straw paint among other painting goods. But this particular part of the display proved of great value through its attractive features.

At this season paint or enamel which will enable an old hat to be changed into a new one, will be in demand everywhere. It is not a class of goods which exerts a genuine appeal in the city only. The smaller places will provide a ready market for this line. Country people. too, will be glad to buy Indeed, this is one of those side lines which would seem well worth some attention. The profits accruing will not be tremendous, but a number of these fair sized profits will make a substantial aggregate That old song which we sang so many years ago, "Every Little Bit Added to What You've Got Makes Just a Little Bit More," applies very well to profits. It is the little extras which make a business pay. But this extra. received from the sale of paint for straw hats, will not only swell the earnings of the paint department, but will also attract custom which will mean sales for other departments. That is one of the advantages of specialties. They not only earn money themselves. but make other lines earn more.

DELIGHTED! IT'S M.L. PAINT.

$5,000 FOR A MAN

This is the sum the Vancouver Lacrosse Club is to pay Newsy Lalonde for three months' service. The reason for this offer is that Lalonde is not only a wonderful player, but that he infuses life and vigor into the whole team.

In the game of business, great success is often attained by securing an article of such merit that its very presence starts your whole stock on the move, or in other words, an article that infuses life and vigor into your business.

Lowe Brothers "High Standard" Liquid Paints often prove the pivot around which is swung a successful Hardware Business. These paints show customers the real meaning of the word "value," for in fact, not in theory, they have greater covering power, greater durability, as well as every other virtue which go to make paint "best."

We back this statement by tests. Investigate and you will be convinced.

Weekly Market Report --- Paints

WHITE LEAD UP.

The expected advance in white lead has materialized, a 15 cent increase having been put into effect. Other commodities have remained the same, but there is a firm tone all round. An advance in putty is forecasted.

The demand is so large now for all lines that the manufacturers and jobbers are freely and confidently predicting a record year.

MONTREAL.

Montreal, May 9.—Not the least let-up is being shown in the demand for paint, and similar lines. The manufacturers are having their hands full getting the goods out. Indeed the shipping departments can hardly keep up; for, since navigation opened, some who have delayed ordering so that they could secure this cheaper means of transportation, are demanding immediate delivery. Some who expected to save a little freight by waiting for the boats, are finding that they are losing the early trade instead, by reason of their depleted stocks.

Oil is being ordered extensively from points reached by the river boats. The supplies laid in before navigation closed are exhausted, and dealers are anxious to secure a new stock.

Lead Up Fifteen Cents.

The feature of the market this week is the advance in white lead—an advance which was predicted in the market reports for some little time back. It was thought last week that the new figure would be only 10 cents higher than that for which lead has been selling, but this was not regarded as sufficient, an advance of 15 cents having been determined upon.

Other prices remain steady, though it is generally agreed that linseed oil is being quoted too low. A buyer of large quantities, indeed, found it impossible to secure what he wanted at the figures quoted. Some firms still set their price at .93 and .96, but .96 and .99 is considered more correct. At that figure oil could be bought. It would be exceedingly difficult to get much at the old figure, indeed a number of purchases have been refused.

The Fear of Substitutes.

Turpentine.—Figures are still generally quoted at .70, but the market is uncertain. A higher price might be struck almost any time. There is danger, however, that too high a figure will result in the use of substitutes. This fear exerts some restraining influence on the market.

White Lead.—After showing an upward tendency for some weeks, white lead has finally been advanced, the figure now being $7 per cwt., instead of $6.85. The high price of pig lead has made this advance absolutely necessary. Indeed at this new figure the profit to the manufacturers is not great.

This new figure is likely to hold for some little time. Certainly any revision which may come will not be in a downward direction. In a couple of months, however, there may be another advance, if lead continues to climb. Eight-cent lead, according to one manufacturer, is something quite possible.

Putty.—Grinding is continuing day and night. The demand for putty is already large. It will grow, and the manufacturers are doing their best to be prepared.

Mixed Paints.—It is here the demand is exceptionally large. Dealers are selling largely, and are necessarily placing supplementary orders. Nor is exterior paint the only style wanted—the specialities, the interior paints, the floor paints, and the varnishes are moving rapidly. Such novelties as straw hat paint are also selling readily. This weather puts the thought of painting in the minds of all who are interested in their homes.

TORONTO.

Toronto, May 9.—There is no escaping the fact that a record demand for paint is being experienced. This is apparent on every hand. The paint manufacturers and jobbers are busier than ever before. "I would not have believed it possible," said one man to-day. "We are away ahead of last year on sales and we understand that the other firms are doing the same. The demand for paint has grown wonderfully in the last few years, but the increase was never so marked as at the present time."

This applies to all lines more or less. White lead is in heavy demand, and, although somewhat unseasonable at present, glass and putty will have heavy sales later on. Enquiries indicate considerable interest in these lines.

The only price change this week is in white lead which has been advanced 15 cents. Other changes are rumored, however.

Linseed Oil. — There has been no change in the oil situation. The advance of 2 cents made last week has been firmly maintained, and oil is still selling at 98 cents for raw and $1.01 for boiled. Rumors of further advances have been heard, showing that the tendency of the market is all toward firmness at the present time. The demand has been consistently heavy.

Turpentine. — No change has been made in turpentine so that the selling price is still 70 cents. If any changes are made in the near future, they will almost certainly be in the upward direction; but it is not at all certain that changes are pending. Demand has been good.

White Lead Advances.

White Lead.—The long expected advance in white lead has come at last. Late last week a general advance of 15 cents was put into effect. It is not considered, however, that this change has solved the situation by any means. Talk of further advances in the future is heard. Substance is lent to this view by the fact that the advance declared is not as large as had been anticipated. Locally it was thought that the grinders would make it 25 cents, and it is, therefore, believed that the new price will not prove high enough under all circumstances.

There is a splendid demand for white lead, and shipments have been very heavy.

Glass.—The glass trade is not very active yet. Dealers will soon be placing their orders, however, and in the meantime the situation is being watched with considerable interest.

Putty May Go Up.

Putty.—Will the price on putty be advanced? A local jobber stated to-day: "If linseed oil remains firm, the price of putty will surely advance. White lead has gone up several times since the present quotations on putty were fixed." It seems reasonable to assume from this advice that there is a strong probability of putty going up. Present prices are:—Standard bulk in casks, $2.20; in 100-lb. drums, $2.40; in 25-lb. drums, $2.50; bladder, in barrels, $2.65. Pure putty prices are as follows:—Bulk, in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder, in barrels, $3.

Prepared Paint. — The demand is very heavy. Dealers are sending in repeat orders, with a persistency which hints at a bigger store business than usual. Business undoubtedly is good, so good that the manufacturers are freely and confidently predicting a record year.

Varnishes and Japans.—The condition of trade is identical in these lines. There is a particularly heavy demand for floor stains.

Quebec, Feb. 4th, 1910.

Messrs. Brandram-Henderson, Limited,
Montreal.

Gentlemen :—We, the undersigned, declare that we have used **Brandram's B.B. Genuine White Lead** for a great number of years.

We used this White Lead in the painting of at least sixty churches, among which are the Basilic of Quebec, and the Basilic of Ste. Anne de Beaupré, and it has always proven entirely satisfactory.

There is no White Lead that can come up to the standard of this brand.

Yours truly,

LA COMPAGNIE GAUTHIER & FRERE,
Per JOS. GAUTHIER.

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time during the winter months, NOW, to investigate the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

MORE ECONOMICAL DELIVERY

That the motor truck will soon replace the horse and rig for commercial delivery purposes is the contention of a writer in MacLean's Magazine for April, who deals with "The Future of the Motor Truck." The trucks are now in general use in the larger centres of the United States and are rapidly growing in popularity in Canada. There is no question as to the better service which they provide; the only issue is as to the cost of operation. To merchants this is a vital problem. The facts, figures and conclusions which are presented in the article would seem to indicate that the motor truck will soon supersede the horse and rig.

Let us repeat :-

our best paint selling argument is **inside** each can we ship and the moment a new customer of yours uses his first can of

Ramsay's Paints

our argument makes him a confirmed and highly satisfied customer of yours, so that, whenever afterwards, he needs paint, he comes to you for Ramsay's. **Your** selling work is over with the **first** can and **this** is the sort of paint trade that **pays.**

Why not adopt it?

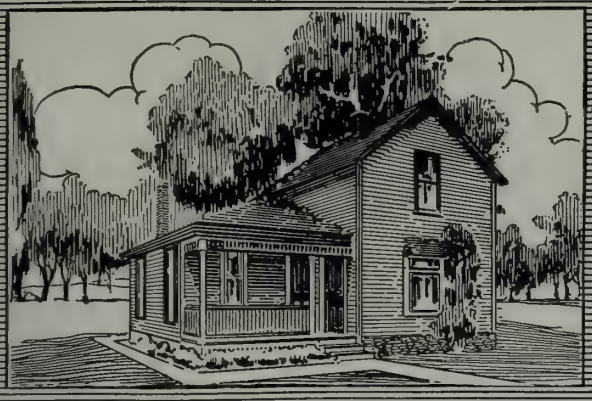
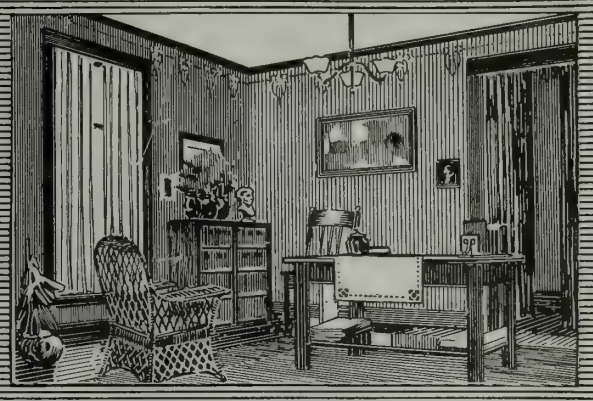
Sterling Prepared Paints

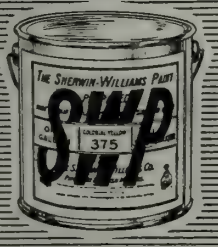
"Sterling" Agents say;—



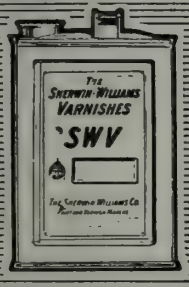
The *quality* and *reasonable price* of "Sterling" Brands is their excuse for the great increase in their sales.



CANADIAN OIL COMPANIES, LIMITED



TORONTO



HALIFAX ST. JOHN MONTREAL QUEBEC WINNIPEG

CALGARY EDMONTON HAMILTON LONDON OTTAWA

Summer's coming—bright sunny days—evenings on the porch. You don't want your home dark, dingy and unattractive when all the rest of the world is busy brightening up—not when it is so easy, so economical, and so satisfactory to brighten it up inside and out with

SHERWIN-WILLIAMS PAINTS & VARNISHES

They include a finish for every purpose around the farm and farmhouse—durable, protective paints for house, barns, wagons and implements; stains, varnishes and enamels for interior furniture, woodwork, floors and all the other worn places about the home. Each Sherwin-Williams Finish is made for a particular use from carefully selected pure raw materials, mixed and ground in proper proportions by the best of modern machinery.

Sherwin-Williams Paint is the paint that will give the outside of your home the longest, surest protection at the lowest price per year. Made of pure lead, pure zinc, and pure linseed oil and the necessary coloring pigment and driers, SWP spreads further and costs less by the year than inferior paints that cost less by the gallon.

Sherwin-Williams Mar-not will give your floors that tough, durable varnished surface that you have been looking for—a surface that will not easily show heel-marks or scratches, and is not affected by hot or cold water.

If you prefer a painted floor, be sure to use Sherwin-Williams Floor Paint, the tough, elastic gloss paint, made to withstand foot-wear and frequent scrubbing. Eight appropriate colors make it an easy matter to select a shade to harmonize with the rest of the room.

To secure artistic and washable walls, use Sherwin-Williams Flat-tone, the new sanitary wall finish that comes ready-to-use in twelve beautiful soft colors. This handsome flat finish wears durably, and may be repeatedly cleaned with soap and water.

Sherwin-Williams Brighten-Up Finishes include a paint, varnish, stain or enamel ready for use for every household purpose.

Sherwin-Williams Paints and Varnishes for the Farm, include special ready-for-use finishes for barns, fences, roofs, wagons, and implements.

Look for the familiar "Cover the Earth" trade-mark when buying Paints and Varnishes.

THE SHERWIN-WILLIAMS Co. of Canada, Limited, Montreal, Toronto, Winnipeg, Vancouver

Another of Those Impressive "Trade-getting" Ads.

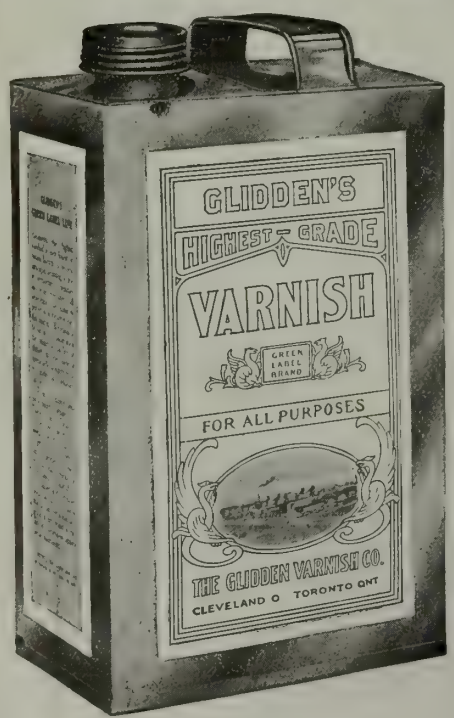
which "The Sherwin-Williams Co. of Canada" are running regularly in the Farm Journals and Leading Weekly Newspapers of the Dominion. Such advertisements DO create interest and lead to an increased demand for S.W. Paints and Varnishes.

IF THERE IS NOT ALREADY A SHERWIN-WILLIAMS AGENT IN YOUR TOWN, GET IN TOUCH WITH US AT ONCE. Our "Selling Helps" to bring customers into your store are most effective.

Glidden

Challenges Comparison

Our terms are Sixty Days—some varnish houses give four months.



Why should you deal with Glidden?

There's just one answer, Mr. Merchant: The quality of the goods and the profits to you.

The Glidden discount is so much more generous than the discounts made by other varnish houses that *the discount discounts the terms.*

The discount we offer the trade on Green Label Varnishes, Stains and Specialties makes it possible for you to *make more money* absolutely regardless of four months'—five months'—or six months' terms, and Glidden's Green Label Varnishes are in a class by themselves.

Have you been reading our advertising in the painters' publications?
We challenge any painter in the land to send us a sample of any exterior varnish equal in quality to Glidden's M.P. Durable Exterior, or any interior varnish equal to Glidden's M.P. Durable Interior, or any floor varnish equal to Glidden's M.P. Durable Floor.

We are giving this challenge bold advertisement in the Master Printer, The Painter and Decorator, The Modern Painter, practical Decorator, Painters' Magazine, Cement World, American Carpenter and builder, etc.

That is the sort of challenge that shows *faith* in the quality of our goods, and the painters know it.

Write for our New and Most Generous Proposition to the Trade on Green Label Varnishes, Endurance Wood Stains, Endurance Colorspar, and Specialties. Use the attached coupon.

87 Years' Varnish Selling Behind this Dealer's Testimony

The following letter is from a house established 87 years—a house which, in its time, has seen plans for selling varnish for the dealer come and go. When such a house comes out with the statement that the "P & L" Line is the *best* proposition they have ever had from both *quality and selling standpoint*, that means best of not one or two lines but perhaps of almost every line of varnishes on the market. It is your opportunity now to profit by the 87 years' experience of this firm by investigating the Pratt & Lambert Proposition from every standpoint.

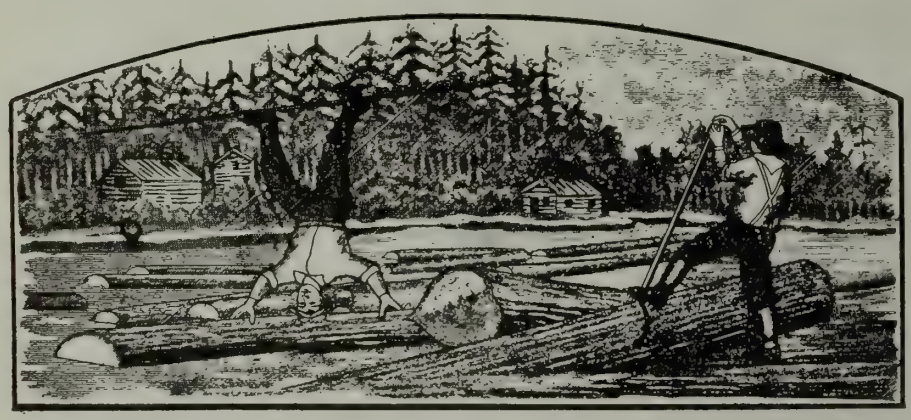
MESSRS. PRATT & LAMBERT Dec. 1st, 1911

Gentlemen: We want to say that your line is the **best** proposition we have ever had, from **both quality and selling** standpoint. Our future efforts, we can assure you, will be **centered** on the P & L Line.

Thanking you for your kind co-operation, we are,

Respectfully yours,

THE BOOTH & LAW COMPANY



There is no reason why you cannot duplicate the success of this and other Pratt & Lambert Dealers in all parts of the United States and Canada. Pratt & Lambert advertising is creating the same kind of a varnish selling demand. This Spring this demand should be greater than ever, owing to the tremendous Pratt & Lambert Spring Advertising Campaign. Do not let this Spring go by without at least investigating what we can offer you in increased varnish sales and profits.

Publicity that Helps Reduce Your Selling Expense

The Berry Brothers' Trade-Mark Label is so well known that it cuts out a lot of the argument and selling-talk formerly needed to sell good varnish.

It means quicker sales and better satisfied customers.

All varnish labels used to look alike to those outside the trade.

Now there's one that the buying public recognizes at sight. Big space advertising in which the Berry Brothers' Label looms large has helped solve your selling problems.

Berry Brothers' Business Builders

The Big-4 with which every dealer can most easily satisfy the quality-demands of his trade.

TRADE LIQUID GRANITE MARK
For finishing floors in the most durable manner possible.

WOOD LUXEBERRY FINISH
For the finest rubbed or polished finish on interior woodwork.

ELASTIC INTERIOR FINISH
For interior wood-work exposed to severe wear and finished in the full gloss.

ELASTIC OUTSIDE FINISH
For front doors and all other surfaces exposed to the weather

Berry Brothers, Ltd.

The World's Largest Varnish Makers
WALKERVILLE, ONT.

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

"Safe-Lock" Wire Fence

is the easiest fence to sell, because it is by far the strongest fence made.

The strand wires of the "Safe-lock" Fence are not kinked—thus each wire retains its full strength.

And just note how the stay wires interlock where they wrap the strand wires. This lock absolutely prevents the slipping of the stay wires along the strands or in any other direction from any cause whatsoever.

A local agency for the "Safe-lock" Fence will bring you the bulk of the fencing business in your locality.

Be wise—write us to-day for Catalogue and particulars.

CANADIAN AGENTS:

H.S Howland, Sons & Co., Toronto; Stark, Seybold, Montreal; Wm. Stairs, Son & Morrow, Halifax.

Make More in 1912

WITHOUT adding to your expenses, you can add a good deal to your profits by selling the farmers of your neighborhood the Louden Line of Barn Equipments as described below.

Selling the LOUDEN LINE of Barn Equipments

is made easy because Louden Barn and Hay Tools are well and widely known throughout the whole of Canada by reason of persistent advertising in the agricultural papers of the Dominion. Also the Louden Line without doubt represents the very best Barn and Hay Tools made—they are the result of 46 years of intelligent thought and practical experience.

Louden Sanitary Steel Stalls and Stanchions

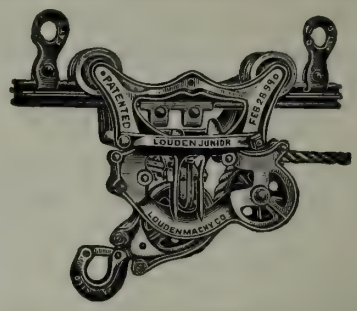
positively increase the yield of milk by adding to the comfort and contentment of the cows. Learn all about them from our Catalogue. Press home the point that to install these devices is an **investment**. We can give you a wealth of testimony.

Louden Hay Carriers and Forks

You do not need to urge the point that the scarcity of labor requires the use of labor-saving appliances, especially for the quick handling of crops. Our **Junior Hay Carrier**, and **Balance Grapple Fork** are an ideal equipment. We also make a **Double Harpoon Fork**.

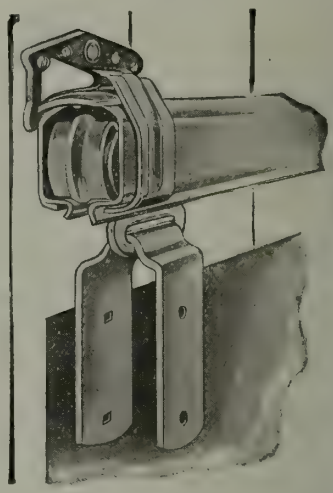
Louden Bird-Proof Barn Door Hangers

This Hanger you are doubtless already familiar with, since it is on pretty general sale by Hardware dealers everywhere. Being bird-proof and snow-proof, simple and strong, it is the best Barn Door Hanger in the world.



Louden Feed and Litter Carriers

Now and in the early autumn is the time to suggest Feed and Litter Carriers to dairy and stock farmers. The Louden Carriers are **marvels of efficiency**. You can sell them—many of them—with our help. Send us the name of progressive farmers and we will work with you to get an order.



Write for our proposal to dealers. Send for catalogue "Everything for the Barn."

THE LAIDLAW BALE-TIE CO., Limited, Hamilton, Ontario

GEO. W. LAIDLAW, Vancouver, B.C. HARRY F. MOULDEN, Winnipeg, Man.

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.

The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

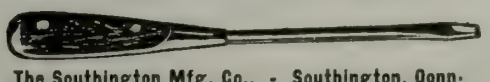
"ACME"

are the strongest and sharpest low-priced Shears and Scissors on the market.

Why were 15,000 pairs of Acme Shears sold daily 5 years ago; and why are 30,000 pairs of Acme Shears sold daily to-day?
Because "Acme" on a shear or scissor spells **satisfaction** to the **customer** at a **low price** and a **handsome profit to the dealer** with greatly increased sales.
Special Representatives, Wiebusch & Hilger, Ltd., New York City.
MR. DEALER: Write your jobber to-day for prices on the "Acme" line, supplement your high priced shears with "Acme" shears and scissors and watch the gratifying results.
Jobbers should write for our W-2 Catalogue, illustrating the most complete line of shears and scissors manufactured.



The No. 701 Oval Steel Screw Straight Trimmer is one of our newest patterns.

Knowledge Is Power

Every hardwareman can get valuable pointers and make his business a more profitable proposition if he will study the experiences of experts who have 'made good.' Our Technical Books for hardwaremen cover a wide range of subjects, among which may be mentioned Metal Working Books, Hardware Window Dressing, Store Business Methods, Paints and Painting, Salesmanship and Sales Plans and Advertising. We have also the very latest books on the plumbing and heating problems.

TECHNICAL BOOKS, 143-149 University Ave., TORONTO

TWO CENTS PER WORD

You can talk across the continent for two cents per word with a WANT AD. in this paper

W. 186 Waterproof Wrapping Papers

May SEEM unnecessary to the average merchant, but consider the reason why so many progressive concerns are discarding ordinary wrapping for one which will effectually prevent the rusting or tarnishing of metal goods.

It is just as economic inasmuch as one sheet is sufficient to wrap goods where two or three would be used of ordinary paper purely as a means of protection.

Suggest to your wholesaler that it will be found mutually advantageous to use.

THE LITTLE GIANT

THE "BAYARD"
AUTOMATIC POCKET PISTOL
Calibre .32 (7.65$^{m}/_{m}$)

A MIDGET AUTOMATIC

THE LITTLE GIANT—A MIDGET HIGH POWER AUTOMATIC.

The .32 cal. (7.65 mm) "BAYARD" Pistol has been designed to meet the demand for a POCKET pistol COMBINING EASINESS OF MANIPULATION AND SIMPLICITY OF CONSTRUCTION WITH MAXIMUM EFFICIENCY.

Its size is that of a .25 cal. pistol, although it shoots THE POWERFUL .32 CAL. CARTRIDGE.

The "Bayard" pistol possesses consequently THE ADVANTAGE of having a size REDUCED TO THAT OF THE .25 CAL. PISTOL and a CAL. OF .32, GENERALLY CONSIDERED EFFECTIVE and heretofore found only in pistols of greater bulk. These features make the "BAYARD PISTOL" the IDEAL POCKET ARM.

"BAYARD" AMMUNITION.

The .32 Cal. (7.65 mm) "BAYARD" Cartridges adapted to Automatic Pistols of this calibre have no equal on the market as to quality, regularity of charges, penetration, etc. We are specialists in the manufacturing of this class of ammunition and guarantee against misfire, hangfire, etc.

Length of Pistol . . .	4$\frac{3}{4}$ inch	Weight of pistol, magazine empty	15$\frac{3}{4}$ oz.
Height " . . .	3$\frac{3}{8}$ "	Weight " " filled	17 "
Thickness " . . .	$\frac{7}{8}$ "	Initial velocity of bullet . . .	837 feet

Penetration at 10 yards: Four $\frac{3}{4}$ inch pine boards placed 2 inches apart
" 100 " Three " " " "
The magazine is made to contain 5 cartridges.

Clinch the Roofing Contract

You positively cannot say too much for BRANTFORD ROOFING. The cut shows the George White & Sons Co.'s plant situated right beside the G.T. main line in London, Ontario. Even the Boiler House and Foundries are covered with

BRANTFORD ROOFING

and **a roofing that successfully withstands the combined action of fierce heat within** and **flying sparks** and **hot cinders**, flung from passing trains, without—besides defying wear and weather—**cannot be too highly recommended.**

N.B.—When you see excavation work going on go after the Roofing Contract and clinch it. BRANTFORD ROOFING will enhance your reputation, and there is a reasonable margin of profit in it for you. Write for our new catalogue.

The Tri-Angle Manfg. Co., 75 Grand St., Freeport, Ill., U.S.A.

This is Soclean Season—Get Yours!

If you have not a stock on hand at this season of the year you are missing an opportunity of a good trade now, with big profits, and a steady trade throughout the year.

SOCLEAN
The Dustless Sweeping Compound

has made many friends, both among users and dealers. Here are some dealers reasons for stocking:

Costs less than others of the same nature.
Earns more than similar lines.
Advertises itself.
Turns quicker than any other.
Requires fewer salesmen.
Appeals to more people.

It's time to go after the profits of this popular line. Put up in attractive tins, sizes to suit every purpose.

Send an order to-day.

SOCLEAN LIMITED, - Toronto, Ont.

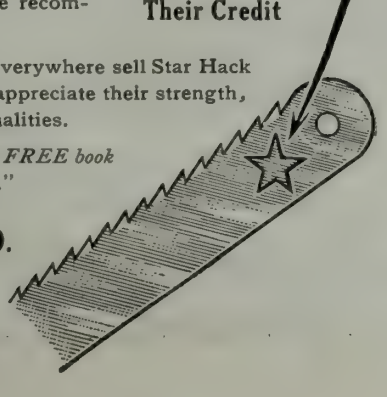
The Smile of Satisfaction

always follows the use of Star Hack Saw Blades. They will stand up to any class of work, cut with every stroke, and have surpassed all Hack Saw Blades in quality and service for over twenty-five years.

STAR HACK SAW BLADES

with fourteen teeth to the inch are suitable for all classes of work except tubing with walls less than 1-16 inch thick—for tubing of this thickness, Star Blades with twenty-four teeth to the inch are recommended.



25 years of Good Work to Their Credit

Enterprising dealers everywhere sell Star Hack Saw Blades because they appreciate their strength, durability, and cutting qualities.

Write for a copy of our FREE book "Tool Practice."

Write to-day for a

New Torrey Honing Strop

It is yours

Absolutely Free

EVERY dealer who has not already received one of our strops free should write for one to-day. It is the greatest advance in strop making in many years—the result of half-a-century of experience. The New Torrey Strop will keep a razor in perfect condition—so it will always give you a close, clean, comfortable shave.

So you will know by experience how good the New Torrey Honing Strop is—so you can tell your customers how perfectly it keeps a razor—tell us the name of your jobber and we will send you a strop absolutely free, except for duty.

Write for it to-day, to Worcester.

Don't make the mistake of selling a cheap arm to a man who can afford to buy a more expensive one

It pays you to sell the "Ross 280" High Velocity.

Not only is it the best sporting rifle made, but the retailing price is $70.00 and it is a sale worth making.

Moreover, any man fortunate enough to own a Ross High Velocity is sure to be proud of it and it will prove itself a walking advertisement for your store.

ROSS RIFLE CO. - QUEBEC

PAT. FEB. 2, 1909

ROBERTSON

SOCKET HEAD

WOOD SCREWS

have a new and very important feature in the square hole. It is a feature that wood workers are quick to notice, as it not only preserves the screw, but also saves much of their valuable time, as it does away with all possibility of the screw driver slipping. It is certain to create a large demand in your vicinity after once introduced.

We also manufacture Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails, Wire and other high-grade products.

The P. L. Robertson Manufacturing Co., Limited, - Milton, Ont.

CATALOGUE ON REQUEST

STANLEY'S
Wrought Steel Screen Door Hardware

Set No.
1750

Each Set Complete in a Neat Box with Screws

DEALERS and BUILDERS alike are **PLEASED** with the high quality of the hardware and the convenient way it is packed ready for use.

Set No. 1750 consists of two 3 x 3 Ornamental loose pin Butts; one 5-in. wrought-steel pull; one No. 3 high-grade steel-wire spring, greatly superior to the ordinary screen springs; and one gate hook and eye. This is the very best set of screen hardware on the market, but sells at prices comparing favorably with other makes of greatly inferior quality.

Set No. 1752 is less expensive, but fully equal to the screen-door sets of other manufacturers. It is made up of two $2\frac{1}{2}$ x $2\frac{1}{2}$ Butts; one $4\frac{1}{2}$ in. pull; one No. 2 steel spring, and one gate hook and eye.

These sets are handsomely finished in Japan, Antique Copper or Dull Brass, or the new **"Stanley" Sherardized,** rustproof finish, which is just the finish for outside use. Packed twelve boxes in a carton, one gross sets in a case.

Send in your order now and be prepared for the Spring Business

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Carborundum Co-Operation

IT is one thing to sell a dealer a bill of goods—it is quite another thing to help him sell what he has bought. Every time a dealer buys a stock of Carborundum Sharpening Stones he gets the full benefit of Carborundum sales helps—of Carborundum advertising that always has created the demand—of the prestige of Carborundum quality.

The Carborundum Company is doing more than ever before to aid the dealer to turn over his stock—to make his sharpening stone account one of his leaders.

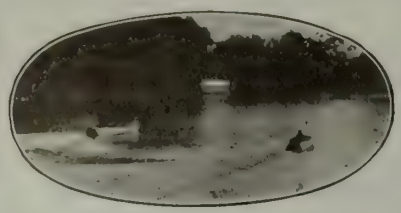
Carborundum window displays—lithograph cut outs—circular matter—booklets—display cases—prepared newspaper copy—all free to the dealer, and are doing great work in identifying the Carborundum dealer as the dealer who sells more sharpening stones.

Have you our catalog—discounts—trade help offers. A letter will bring them.

The Carborundum Company, Niagara Falls, N.Y.

THE LIGHTNING AND BLIZZARD

FREEZERS



stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.

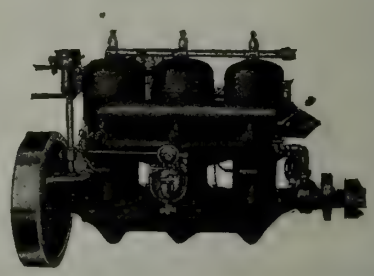
Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

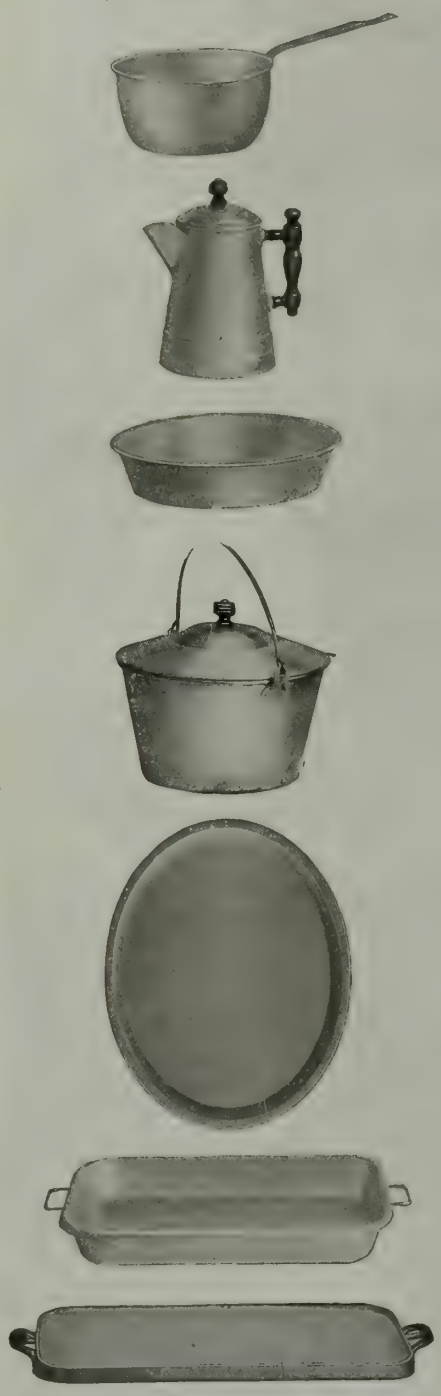
WEAR-EVER
NA ALUMINUM LTD
TRADE MARK

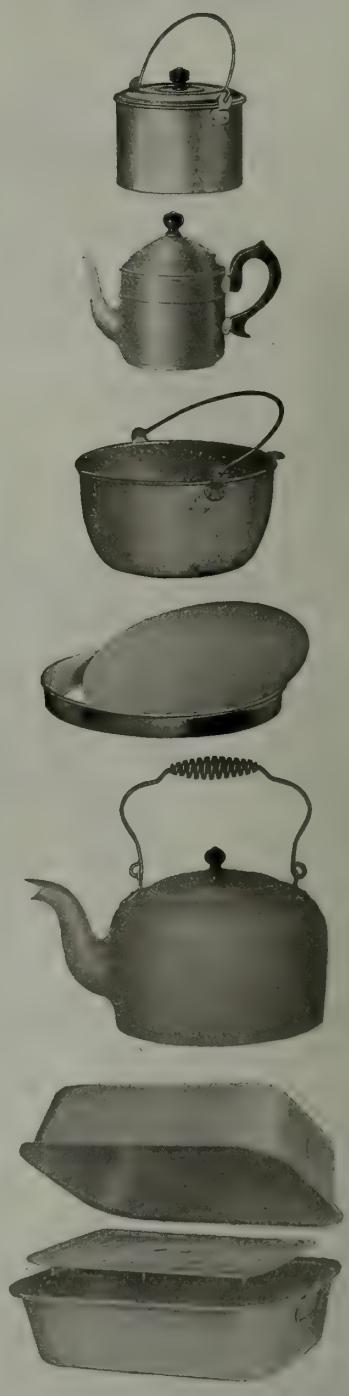
"Wear-Ever" Aluminum Ware

"No! They are not all the same."

"Wear-Ever" Aluminum Utensils *are different.*



Of course, aluminum is aluminum; but utensils may differ in thickness, in handles, in finish.



Thickness. They are made thick enough to prevent denting readily; thick enough to guarantee a lifetime of satisfactory service.

Handles. The handles of **"Wear-Ever"** utensils are made of the best tinned steel. Aluminum handles would become too hot—wooden handles would burn off or break. The handles of **"Wear-Ever"** utensils are gripped to the utensils by aluminum rivets with large heads. The heads are not sunk into the side of the utensil—the side remains of uniform thickness, strong enough to hold the handle on firmly for years.

Finish. The outside is polished. The inside is hardened by an electrical process which makes the metal harder, smoother, less liable to be discolored by food or water containing alkali or iron, and more easily cleaned than would be possible if the utensils were not so finished.

Replace utensils that wear out with utensils that "Wear-Ever"

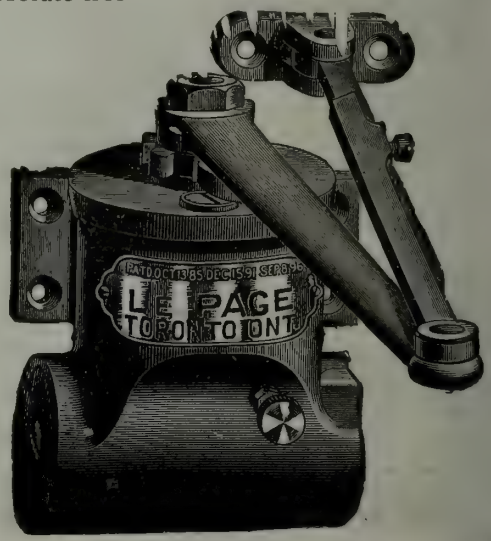
LOWER DOOR CHECK

The "LE PAGE" Patent OIL DOOR CHECK and SPRING

is a marvel of simplicity and has a mechanical action that is perfect.

It is the only door check made without packing in its working parts, which assures absolute freedom from packing friction.



The door on which this device is used cannot slam, as the oil in the spring cup of the check forms a cushion, which keeps the door under perfect control and allows it to close quietly.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumbscrew at the right.

The bearings are long and the spindle, with crank at lower end, is drop-forged from cold rolled steel.

Toronto public schools, Simpson's, Eaton's, etc., use this door check exclusively.

Write for circular and prices.

43 EXCHANGE PLACE

NEW YORK CITY

Put the FORD to this test.

Take an ordinary piece of wood, after starting the screw point, do not use any pressure on the brace. After the lip begins to cut, count the number of turns it requires to bore through the wood. Then do the same on the end grain of Hickory or any hard wood you wish. Then—try any other Bit you may have in these same ways.

The result will prove our claim that the Ford is the fastest boring, smoothest working and most accurate boring Bit yet produced. Give the FORD the above test.

and be convinced of its superiority

It is universally used by all progressive carpenters and electricians, and its almost phenomenal sale tells the story of its practicability for all kinds of work.

It bores almost twice as fast as the average bit in both hard and soft wood, wet or dry, or even frozen. It is unexcelled for the finest, fussiest work.

No clogging, no turning off—a knot can't stop it, it is accurate to the fraction of an inch. The FORD is imitated but not equalled.

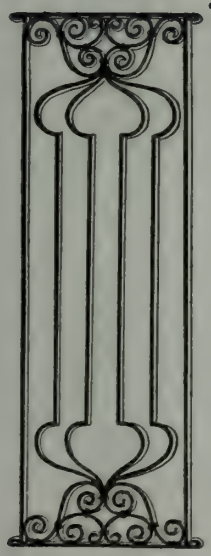
Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In "The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.



How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

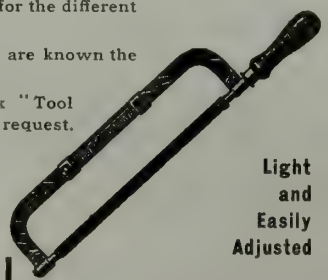
INSURES HACK SAW RESULTS

STAR Hack Saw Frame No. 10

is light, handy and one of the strongest tools of its kind on the market.

It is quickly adjusted, and has that combination of lightness with a maximum of strength which is so indispensable in a tool of this description.



STRENGTH WHERE STRENGTH IS NEEDED

The strength of the Star Frame is due to its simple and sensible construction, and to the fact that the greatest strength of the tool is concentrated where the greatest strain comes—in the centre of the frame.

The steel is tempered and the appearance of the frame is excellent. This tool is adjustable to carry blades 6, 7, 8, 9, 10, 11 and 12 inches long and is marked for the different lengths.

The merits of Star Hack Saw Blades are known the wide world over.

An interesting and instructive book "Tool Practice" sent to anyone FREE upon request.

Dealers Must Solve the Problem of Interesting People in This New Article—Does Renting Pay?—The Demonstration is Regarded as a Safe Method—Some Dealers Hold House-to-House Canvasses—The Future Will Find Vacuum Cleaners a Household Necessity.

There is one outstanding problem in connection with retail handling of the vacuum cleaner. The machine must be introduced into the home. It devolves upon the merchant to find some way to get the public interested in vacuum cleaners. Once a person is interested, conviction soon follows.

The vacuum cleaner is distinctly new. It is only of recent years that it has come to the front and people are slow to accept innovations. This may be a rapid age, an age of radical changes, but the average person nevertheless is encased in a hard crust of conservatism. Up to a certain point, the average man is an advocate, unconsciously perhaps, of the let-well-enough-alone principle. When you add to that the fact that he is naturally suspicious and highly skeptical, reasons are not wanting for the slowness with which innovations are generally received. It is a fact that our immediate progenitors thought a long time before they abandoned their open grates for that "new-fangled contraption," called a stove.

As stated before the vacuum cleaner is distinctly new and it is going to take quite a lot of educational work before it is accorded the universal recognition it deserves, and that it is going to receive in time. Quite a share of this work will fall upon the shoulders of the retail merchant.

The Renting Method.

The common method adopted to introduce the machine is to rent it out at so much per hour or day. This is undoubtedly effective in convincing people of the powers of the machine. It is calculated to break down all skepticism on that score and to establish the supremacy of vacuum cleansing over the old one-broom-power method, but at the same time it raises certain other obstacles in the way of sales. When people find they can rent machines, they do not buy. Cases are known where dealers have been renting machines for a couple of years and have not yet made a sale. They find no difficulty in renting the machines so it is a reasonable assumption that they have convinced a large number of the value of the machine. The fact that none of these people have purchased machines, would seem to point to the fact that the possibility of renting has deterred them.

That, however, is a debatable point and space does not allow further reference to it, here.

Holding Demonstrations.

The most effective method of introducing anything new is to hold demonstrations. People, nowadays share one quality pretty generally with the Missourian; they must be "shown." They hear and read that a new machine will do a certain thing but they want positive proof, occular proof preferably, before they will extend the sanction of their belief. The flying machine was looked upon with frank disbelief until Bleriot sailed across the English channel. Men awakened then to the practical possibilities of flying and the doubters are becoming fewer all the time.

The story of the Pied Piper of Hamelin, who drew all the rats in a vermin-haunted town from their hiding places and led them into the River Weser with the sheer fascination of his music, is a quaint fiction which still interests people but has never begot belief. Every housewife has heard that there is a machine on the market which sucks up dirt and draws dust with irresistible force from unseen crevices, leaving everything clean and new. But very few have seen it done. They may not regard it as an absolute fiction but they want to see it done themselves. The thrifty matron is not easily convinced that any machine can clean a house better than she can do it with her tried and trusty helpers, the broom, the mop, the scrub brush and the duster.

Clearly then the duty of those interested in selling vacuum cleaners is to see that the necessary proof is supplied. To hold demonstrations in hardware stores is the method being adopted and the results are found to be good.

Are Selling Machines.

Quite a number of Ontario dealers have held demonstrations this spring and in almost every case immediate results were obtained. One dealer has already sold nine electric vacuum cleaners and six hand power machines. This enterprising salesman is located in a town of less than 3,000 people, so it is apparent that he is making considerable headway. Another dealer—in Hamilton this time—has sold four electric cleaners and six hand machines. The same record has been made by a hardwareman in a small place not far from Hamilton. Others still, have sold one and two as the direct result of demonstrations.

Methods of Handling.

To make a success of a demonstration, one phase of it must not be neglected. The news must be spread around so that a goodly number will take advantage of the opportunity. It is waste of energy to demonstrate to an audience of two or three, or even to a good-sized crowd made up of the wrong kind of people. Women whose husbands have sufficient means to purchase a machine are wanted particularly at a demonstration of this nature, and the dealer should see to it that he gets this kind of an audience.

When it comes to publicity, the merchant falls back upon his daily paper. It is the best medium he had of spreading news. Consequently, when a demonstration is decided upon, he cannot do better than plan a live advertising campaign, starting it a few nights before the time when the first demonstration is to be conducted. It is doubtful if a real success can be achieved without the assistance of printers' ink.

Called Up Customers.

However, there are methods of very effectively supplementing the advertising. The Playfair, Preston Co., Midland, Ontario, adopted a plan which

other dealers might well follow. They prepared a list of the likely prospects, including in it the names of such of their customers who were well-to-do, and could reasonably be expected to show interest. They then called up each person on the list, explained about the demonstration, and extended an invitation to be present. The plan worked out extremely well, and they had a big attendance.

By way of digression, it might be pointed out that a direct invitation or anything in the nature of personal attention is keenly appreciated by the average person. If a merchant goes to the trouble of calling up one of his customers with an invitation to visit the store, the customer accepts it as an evidence of his or her importance in the eyes of that dealer, and is flattered accordingly.

Demonstrating in Homes.

Good advice is often obtained from the most unlikely sources. It was a "red-hot tip" which our old friend Mahommed handed out about the mountain. If all men would realize that mountains never move and that, therefore, they must do the moving, there would be a whole lot more accomplished in this world.

This is not another digression, but merely a way of leading up to the statement that if people will not come to the dealer's vacuum cleaner demonstration, the demonstration must go to the people. Quite a few dealers have realized this and have been conducting house demonstrations.

A House-to-House Canvass.

D. Cinnamon, of Lindsay, Ontario, writes as follows:—

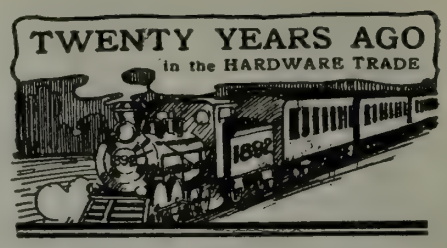
"We had an agent here for a few days, but simply had him go from place to place and show the machine. On account of the earliness of the season it was hard to get customers interested, but he succeeded in making sales. I believe that the only successful way to sell vacuum cleaners is to have a house-to-house canvass and make practical demonstrations of same."

Mr. Cinnamon is a firm believer in demonstrations in all lines. During the last few weeks he has held paint and varnish demonstrations, and has found them successful in every respect. He has had steady sales ever since, as a direct result, he believes.

The house-to-house method has also been adopted by the Playfair, Preston Co., who send a man out to demonstrate the machine in the home. Macnab Bros., of Orillia, have also followed this plan.

An Effective Method.

This is undoubtedly a most effective way of introducing the vacuum cleaner into the home. When the canvasser has gained entry into the house (which is sometimes difficult) he cannot fail to interest the housewife. Every woman is more or less curious to see how "new contrivances" work, particularly when they promise to lessen labor and improve results. The curiosity they feel in regard to the vacuum cleaner is sufficient to counteract the prejudice they entertain against "agents." It is well, by the way, for the demonstrator to remove this prejudice at once by stating that he represents a local firm. If he lets his hearers think that he is an outsider, the chances are that many will refuse him a hearing.



Once inside the house, however, the demonstrator has a splendid opportunity. The looks of the machine alone stimulate curiosity. It has a mysterious appearance, and, after the demonstrator has cleaned up a rug and removed a pile of flour from the carpet without leaving a speck, the women are quite willing to concede that the machine has powers quite in keeping with its appearance.

Demonstrations and calls may not cause sales, except in a comparatively small percentage of cases, but they perform the still more valuable purpose of "introducing" the article. And that is an important consideration at the present time.

The future will see the vacuum cleaner a necessity in every home. This is not a mere idle prediction, but a probable condition to which the trade can look forward with a reasonable degree of certainty. The eminently useful nature of the machine assures this. The time is coming when the vacuum cleaner will be regarded as quite as necessary in the home as plumbing appliances, baths and furnaces. This condition can be brought about by systematic "missionary work" on the part of the manufacturers and the retailers.

BACK DEBTS HELD TRADE.

It is interesting to recall the experience of a Western hardware dealer who changed over to the cash system about eighteen months ago. Collections had been slow and he found that he had about $8,000 on his books. This load was more than he could carry, and yet he hesitated to "take the plunge," because he feared that it might prevent him from making his back collections; and he could no more afford to lose the amount than he could afford to go on piling up the total. Finally he did take the step and he found that the back debts served as a protection for him against loss of trade. Customers who were "on the books did not have the face to stop dealing with him when he came out with his cash ultimatum.

The following items are taken from the issue of May 21, 1892:

With this issue the name of the paper is changed to "Canadian Hardware and Metal Merchant." The cover is also changed and the paper presents a brighter and newsier appearance.

Editor's Note.—There have been a number of changes since that time, culminating in the Hardware and Metal of to-day, with its attractive front and back covers, and many other new and valuable features. The improvement in the paper has kept pace with the improvement in general trade conditions.

* * *

"The trade in gas stoves has grown by a little larger increment every summer since it began, and manufacturers expect a big call this year. The reports of travelers, who have just started out on this line, so far, bear out that expectation."

Editor's Note.—The gas stove industry has had an increase every year since. The increase this year will probably be greater than the total volume of trade at that time. Had stove manufacturers of twenty years ago been told that the demand for gas stoves in 1912 would reach present proportions, they would probably have been frankly incredulous. The growth of trade has dwarfed expectations. What of twenty years hence?

* * *

"The hardware merchants in Vancouver, B. C., have taken the initiative steps in the early closing movement this summer. After next Saturday they will close on Saturday at 2 o'clock, and at 6 o'clock on other week days."

Eidtor's Note.—Progress is slow in some lines. The question of early closing is no closer to a permanent settlement than it was twenty years ago. A great number of hardware dealers still keep open every evening. This practice is not confined to the smaller places. It is most common, in fact, in the large Canadian cities.

"The C. F. Smith Co., Belleville, have sold out the machinery plant and goodwill of their pieced tinware business to Edwin Chown & Son, of Kingston."

A System to Keep Track of Expenses

Dealers Should Have a Thorough Metod of Keeping Tab on Overhead Expenses—An Expense Ledger is Kept by H. H. Otton & Son, of Barrie, With Best Results—The Question of the Proprietor's Salary — How Many Times Should a Hardware Man be Able to Turn His Stock in a Year?

"There is not one retailer in ten who keeps close enough tab on his expenses," was the comment passed by a man closely in touch with both the retail and manufacturing ends of the hardware business.

Two problems face the merchant in handling his overhead expense—First, keeping track of all expenses and second, seeing that the proper percentage is charged on all sales. Of the two, the first is by far the more difficult.

Overhead expenses include every indebtedness incurred in the maintenance of the business. A close check should be kept on store expenditures for the double purpose of keeping the expense down to a reasonable level and of seeing that the full amount is allowed for in fixing selling prices.

A great many dealers are extremely loose, however, in their methods of checking expenses. A business accountant relates an incident which shows just how careless some merchants are. He had been called in by a hardwareman to go over his books and "fix them up." The dealer told him that the books had been muddled somewhere for, although he had done a bigger business than ever before on what seemed to be a reasonably large margin, his profit had been of about as negligible a quantity as that of the famous, "Sawyer, late Nockemorf." "The trouble must be with the system," sagely concluded the dealer. "Arrange a new one for me."

The accountant went over the books and concluded that they had been reasonably well kept. He was puzzled, however, by the smallness of a number of expense items. Cartage costs were entered for each month, and they seldom aggregated more than a dollar.

"How do you get off so light for cartage?" he asked.

"Those figures represent the balance against me for cartage," explained the dealer. "I have an account with the cartage company, and they have one with me, which we adjust each month. There is generally a little something for me to pay them, which I enter as a business expense."

"Then you do not charge the goods which you supply them with as business expenses also?"

"No," admitted the dealer. "I haven't."

The accountant found a number of other items of a somewhat similar nature, which had not been charged up. "It's easy to see where your profits have gone," he explained. "Check up your expenses closely and you will find that you have not been charging enough to cover the cost of doing business."

This may be an extreme case, but it is typical of the laxity of the methods followed. What is needed is a good system for the checking of all expense items.

Keep Expense Ledger.

A good system is that followed by H. H. Otton & Son, of Barrie. F. W. Otton explains it as follows:

"We arrive at our expenses by keeping a special expense ledger in which are posted all items daily, and at the end of the year we find an average cost of doing business by comparing it with our cash receipts, which we use as the amount of business done each year. Our average cost is about 20 per cent. This does not vary 2 per cent. from year to year.

"We can tell you every day, week, month or year what our expenses are for various things, such as wages, rent, fuel, light, water, taxes, stationery, phone, stable (such as horse feed, wagon repairs, harnes repairs, horseshoeing, etc.), insurance, express, freight and other lines."

Keeping Close Check.

This system results in every expenditure being entered. It has another very tangible advantage, also. A close watch can be kept on expenditures. When it is possible to check over expenses every night, ascertain the total and compare it with past records, the dealer is less likely to let his overhead expenses "run away with him." He can detect leaks more readily and take steps to stop them.

Proprietor's Salary.

The article in last week's issue on the question of overhead expenses has stirred up considerable interest. One merchant writes as follows:

"You are quite right about proprietor's salary. Every dealer should allow himself a salary and a liberal one; not an extravagant one, mind you, but sufficiently large to cover the work he does. Personally, I enter $2,000 among the store expenses as my own salary. That may seem large, but figure it out this way. I have a head clerk who draws $22 a week. All he looks after is sales. When I have to do the buying, manage the finances, look after collections, write the advertising, do all the worrying and shoulder the responsibility as well as doing a certain amount of clerking, surely I am entitled to the figure I have charged. That $2,000 item is figured in the selling price of the goods just the same as the salaries of the clerks."

How Many Times?

Another merchant writes: "I have been interested in your article on "Fixing the Selling Price' and 'Overhead Expenses.' It seems to me that the matter of fixing the selling price depends to a great extent on the number of times that you are able to turn your stock. For instance, if I invest $5,000 in stock in the first place and turn it three times, making 5 per cent. clear profit on every sale, I will make 15 per cent. on my original investment of $5,000, or if I figure on the selling price, probably 10 per cent.

"It seems to me that the oftener a merchant turns his stock, the lower the profit he should charge. He should not try to put his profit so high that the public will come to think that he charges an extortionate price.

"Now, as to overhead charges. They certainly run high, and the dealer cannot afford to cut them down. At the same time, competition is so keen that we cannot put big margins on the price of goods. The remedy lies here. The dealer must pay atention to the selling end. Get the latest ideas, push sales and turn your stock oftener. Then you will be distributing the overhead expense over a larger total, and it will reduce the percentage.

"Figuring in every line in my store, I reckon that on the average I turn my stock three times in the year. What do you hardwaremen down East do?"

Albertan.

HELD DEMONSTRATION.

Lucan, Ont.—A demonstration of oil stoves was held in the hardware store of G. A. Stanley on Friday. The services of an expert demonstrator had been secured. Biscuits and coffee were distributed throughout the day to all who called.

GET GOOD IDEAS.

"We often see some very fine window displays and get some good ideas from your journal."—British America Paint Co., Victoria, B.C.

PUBLISHED EVERY SATURDAY.

A REMARKABLE EXPANSION.

Significant evidences of prosperity come from all sections of the country. It is quite apparent that the predictions of a record year so confidently voiced at the first of the year are not only going to be substantiated, but made to appear moderate in tone by the actual occurences. The following figures, reproduced from Bradstreets, tell concisely the story of conditions in the West:

Reports from the West indicate that the remarkable progress which has characterized that portion of the country is continuing with no signs of abatement. Bank clearings, building returns and customs receipts show heavy increases over the corresponding period of last year, notwithstanding the fact that those of 1911 were very far in advance of the previous year. Winnipeg's bank clearings for April totalled $115,851,068, as against $82,148,419 for the urevious year. Building permits, for the first four months of the year, $5,005,810, against $3,327,650. Calgary's permits for the first four months of the year total $4,114,098, against $2,769,216 for the same period last year. April bank clearings were $20,-761,573, an increase of over 44 per cent. over April, 1911. Custom receipts increased forty per cent. Edmonton's bank clearings for April were $16,335,538, against $8,-836,436. Building permits were $2,060,000, against $359,-027. Regina's April clearings were $9,038,385, as against $5,293,218. Building permits, $6,574, against $5,624. Returns from all other centres of population show similar increases.

It is no wonder that the transportation and manufacturing facilities of the country are being taxed to the utmost to keep pace with so remarkable an expansion. It must be considered also that the East, while not progressing in the spectacular manner of the West, is nevertheless growing beyond all expectations.

A BAS THE HANDBILL.

The handbill has few friends. As a means of advertising it has become generally discredited, although some dealers find that it pays them when they use it as an adjunct to a newspaper advertising campaign. The chief objection is the fact that people have become prejudiced to this form of advertising. So much printed matter is shoved into letter boxes or wrapped around door knobs that everything gets scant attention, if any.

A writer in the Ironmonger voices the following derogatory opinion of the handbill:

"It will take a lot of evidence to convince me that this method of advertising has any points of outstanding merit, and I am sure that the handbill that has must be exceptional in character. As a rule, the destiny of a handbill is to be carried from the door mat to the kitchen fire with all possible speed. If it escapes combustion we may rest assured it has justified its existence, and has carried some unusual message. The great argument against the handbill is that it cannot be made personal, and therefore can never be truly effective. One is pushed into the letter-box of the squire, its fellow underneath the door of his lodge-keeper. The same message cannot be suitable for both, and probably it appeals to neither."

SELLING TO CATALOGUE HOUSES.

In this issue a letter is published from a correspondent who claims that the only way to eliminate unfair catalogue house competition is to refuse to buy goods from firms who sell to the mail order houses. This view cannot be accepted, for its obvious unfairness to the manufacturer who sells to catalogue houses, but at the same time protects the interests of the retail dealers. It is surely within the rights of the manufacturer to sell his goods to the large city stores when he makes provision that the goods are not to be offered to the public at a price below what the retailer can sell at a profit. Many manufacturers set a selling price which the catalogue houses are not permitted to cut. This restriction serves as an adequate protection to the retail dealer. The catalogue house cannot offer the goods at a price lower than that asked by the local dealer and, as the retailer has every other advantage, he need entertain no fear of the competition of the mail order firms. In such cases, the fact that the catalogue houses handle these articles is of great advantage to the retailer. The goods are extensively advertised through the catalogues. People see them there and, when they find that the local dealer sells at the same price, they buy from the dealer. Thus, the articles are well advertised and the fact that the catalogue quotes the same price as the dealer serves as an object lesson. Some people believe that the catalogue house is always lower than the home dealer. When they find out that such is not the case they are not so prone to buy by mail.

THE MARGIN OF SAFETY.

The ill-fated Titanic had life boats sufficient to accommodate only some 800 people. It had, however, palm rooms, gymnasium and swimming baths sufficient to provide for the comfort of 2,000. There seems something incongruous in this, for owing to the calmness of the sea all who could be loaded into the lifeboats were saved. A few great rafts and the safety of all would have been assured. These rafts would have proven their value after the much vaunted air tight chambers had failed in the hour of need.

The Titanic is but a case in point. This tendency to obtain a maximum of comfort without too great thought of safety is seen on every hand. The Titanic, it would seem, was made safe. But the air tight chambers proved vulnerable, and then the boats were inadequate. The margin of safety was too small.

Architects declare that this is so with a number of buildings. They will bear the stress which is expected of them, but under an unusual strain the result could

not be guaranteed. The fire chief of Montreal has stated that there are a number of apartment houses which are none too safe. Yet people still continue to live in them. They take the risk.

There is too much of this taking a risk now-a-days. The margin of safety in ships and buildings is often too small. Occasionally a railway bridge gives way; a rail breaks; the margin of safety was too small.

Extra safety, of course, means extra cost. But the additional expenditure might be saved elsewhere. Fewer palm rooms and plunge baths, and more life boats would seem both a common sense and an humanitarian principle.

TRADE WITH WEST INDIES.

The Minister of Trade and Commerce has announced a trade agreement between Canada and the British West Indies. The terms have not yet been made public, and will not until ratified by all the Governments and Legislatures concerned. The only general statement made is that the agreement is of comprehensive scope in regard to the freer exchange of nearly all the items of exchange between Canada and the West Indies. It is expected that it will come into effect on January 1, 1913.

Provision is made for including the Bahamas, Bermuda, Jamaica and British Honduras in the reciprocal trade arrangement at any time they so desire.

POINTED EDITORIALS.

Handbills have one valuable purpose in life anyway. They are mighty handy to start fires with.

* * *

The white man carries a heavy burden. The burden of the retail dealer, who works from 8 in the morning until 10 at night, is the heaviest of all.

* * *

When hours of service are too long, a man's efficiency suffers. And every other part of him too.

* * *

The man who can get the "extra margin" every time is the man who ends up by getting coupon cutters' cramp.

* * *

Modern frenzied finance methods can be declined as follows: I divide, thou dividest, he divides, we divide—they wait.

* * *

Selling plenty of garden tools nowadays? If not, depend upon it that the other fellow is having a double trade. Find out how it is that he has secured the "inside track" on you.

* * *

Shopping weeks are again coming into vogue. They are good institutions if managed right, and brought on only at sufficiently long intervals.

* * *

"The magic of paint" is a good subject for a forceful talk to customers who own houses. Give them the facts and figures. They have probably never heard them before.

* * *

Handling water heaters? There will be a demand for them as soon as fires are allowed to go out finally and definitely.

* * *

J. Pluvius, Esq., seems "to have it in" for the hardware dealer and the baseball player. The continuous succession of showers that he is arranging hurts the business of the one and spoils the fun of the other.

"Whippen"

UNDER this heading, a story was published in a recent number of the Saturday Evening Post, which contained the strongest argument for pushing quality goods which the writer has encountered for some time.

Whippen was a clerk in a grocery store. He had ideas of his own and was just chockful of confidence. He discovered one day, more by accident than anything else, that people like to pay the highest price for things under certain circumstances—that they do not think they are getting the best unless they pay the highest price. This, he decided, was a law of human nature which contained the promise of a fortune for those who used it. Whippen used it. He went to New York and bought a share in a candy business, taking upon himself the responsibility of the sales end. He rented a store on the most exclusive street, fitted it up regardless of expense, and put in a stock of candy made of the very best material. Before his advent, the most expensive candy to be obtained in the American metropolis was 80 cents a pound. The audacity — or shall we say genius?—of Whippen made it clear to him that he must not only beat this topmost figure, but he must beat it good. He fixed his price at $1.50 a pound In doing so, he believed that the unheard-of height of his price would make people believe the candy to possess unheard-of merit.

Just to make sure, he started to advertise, and again that shrewd instinct of his told him that he must advertise extensively or not at all. He signed advertising contracts for figures which would have staggered a man with the least touch of timidity in his nature. Soon the newspapers and weekly publications blared forth the fact that

IF HE DOESN'T GIVE HER WHIPPEN'S,
HE DOESN'T GIVE HER THE BEST.

People looked at the price and were convinced instanter that Whippen's must be the best. There was no getting away from the proof in that colossal figure of $1.50 a pound. It was a challenge to every young man in Gotham with a "best girl" to buy Whippen's.

To make a long story short, Whippen captured the cream of the candy trade. He sold as much as he could make; and could have sold more, only again his genius came to the rescue, showing him that to restrict the output was to insure permanence to the craze.

This story may seem exaggerated and partaking more of fiction than of fact. In the opinion of the writer, however, it reveals a basic truth. People who can afford the best, want the best, and are prepared to pay for it. Furthermore, paying the best price is the surest way that people have of convincing themselves that they have got the best. When a man buys an article at a low price, he does so at the dictates of necessity, and he suspects flaws in the goods. If he pays the topnotch figure, he accepts the value of the article absolutely. He may grumble at the price, but he never questions that he is getting quality.

It should be understood, however, that Whippen sold a candy which was as good at least as any other on the market. The margin he demanded was possible, perhaps, in that line of business. It would not be possible in the sale of the necessities of life. A hardwareman who marked his goods 80 per cent. higher than the others in the trade would soon have the sheriff in charge.

The story demonstrates two truths, however. The first is that it pays to handle quality goods. The second is that when an article is the best on the market, it is safer to put the price above the market level than to cut below.

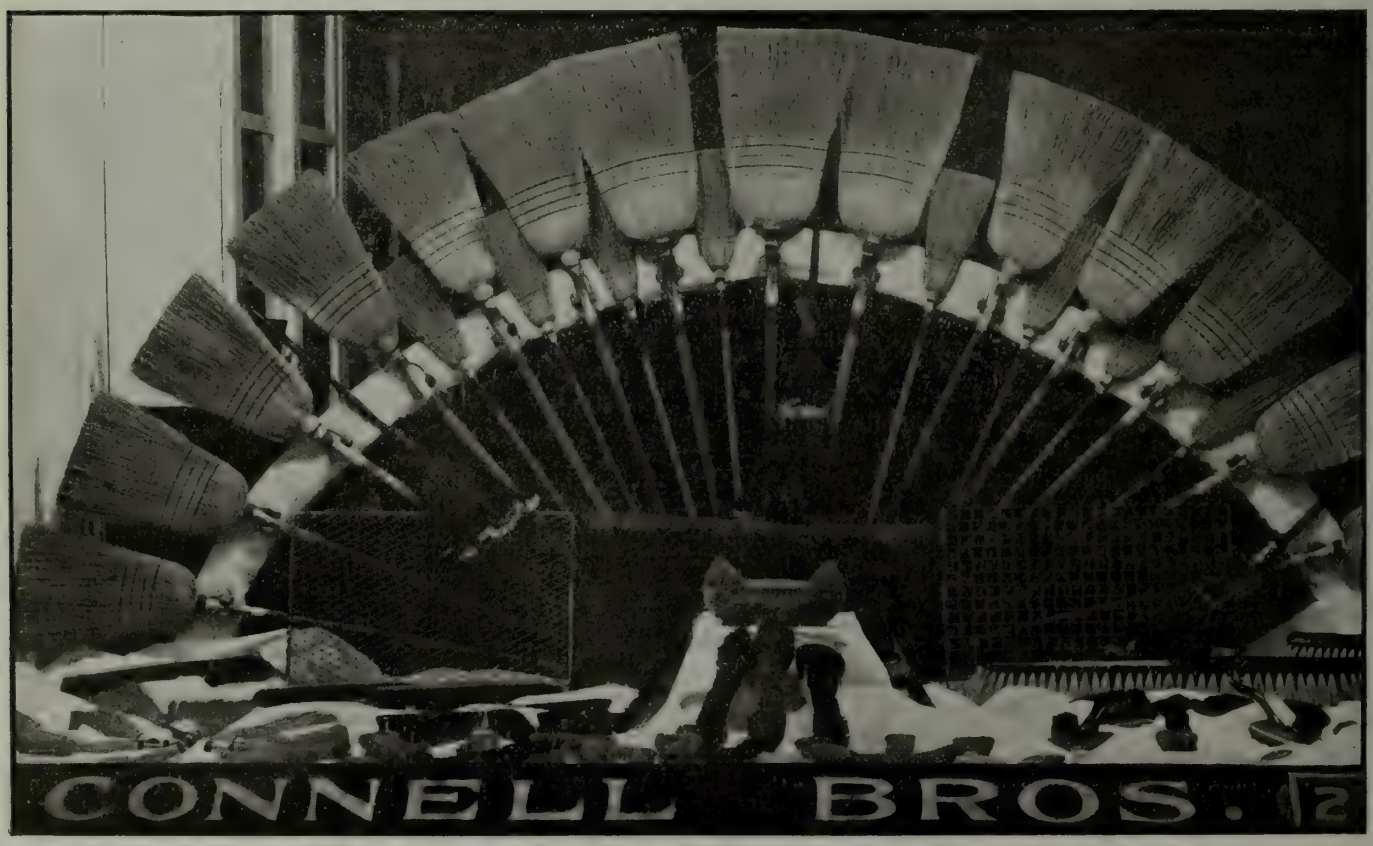
Keeping a Hardware Store Seasonable

The Goods Which are Chiefly in Demand Should be Featured — The Dealer Should Always Keep up With the Seasons—Samples of Good May Advertising and Window Dressing—The Wisdom of Changing the Stock Around.

The word "seasonability" means a great deal to the retail merchant. It expresses one of the real secrets of success in handling the sales end of the business.

The hardwareman who keeps step with the seasons or even gets a little ahead is bound to secure a larger share of the trade than the man who lags behind. The question which the aggressive dealer asks himself is: "What lines should I be featuring now, and what goods will be coming in soon?"

Apply that question to the present and the answer is readily forthcoming. The lines to be featured now include garden tools of all kinds, farm tools, wire fencing, seeds, gas stoves, etc. The goods which will be coming in soon include particularly the articles which will be needed when the first mid-summer warmth is felt and when people start to flit to summer homes; to wit: screen doors, window screens, oil stoves, camping kits, camping stoves, inexpensive table equipment and other goods of that description.



Under ordinary circumstances, it would be a little late to feature gardening tools. The weather has been unduly cold, however, and only a few of the most hardy of the spring crop of amateur gardeners have started to work. This is the last chance, however, for an appeal to this class of trade. In a week or two, Old Sol will have started to work in real earnest and the dealer who has not demonstrated that he handles gardening equipment will not get his full share of the trade. Many progressive dealers began their garden tool campaign several weeks ago and they have been making sales ever since. They may have seemed to be "rushing the season" but it has brought them results.

Featuring a seasonable line consists pretty largely of advertising it extensively and arranging window displays. The dealer has two methods always at hand of catching the public eye — through the press and through the store window.

A Timely Effort.

A good sample of seasonable advertising is contributed by Stanley Mills & Co., Hamilton. On Saturday, May 11, a six-column space was devoted to hardware lines now in demand and the goods which the public will be needing in the very near future. The headline of this advertisement was, "Here are your summer needs for home, lawn and garden" and the introduction was as follows:

> "The 'growing time' is with us again. Seemed long in coming but, when you think of it, nature runs along pretty regularly and, whether we think it or not, she brings things ON TIME for the best interests of humanity. And now that the trees and bushes and lawns are turning green—and the gardens are sending forth their fresh new life, men and women everywhere find summer needs demanding their attention. This is just where the Stanley Mills Store fits right into the order of things, for this is Hamilton's headquarters for summer needs for the home, indoors and out. Screen doors, window screens, paints, hose, garden tools, lawn mowers, hammocks, washing machines, refrigerators, campers, and cottagers' supplies of all kinds are specialties here."

A reasonable window display in the store of Connell Bros., Edmonton—Reproduced by courtesy of Stephens Paint News

The different lines mentioned in detail included garden tools, lawn mowers, hammocks, screen doors, wire cloth, paint, sprinkling needs, awnings and flower bed fencing.

The Coming Demand.

It is probably true that few housekeepers have considered the necessity for screen doors yet, but this advertisement contained a reference which brought an immediate demand for screen doors and which can be depended upon to effect sales right along. It read as follows:

To "Swat That Fly" is all right —if there were nothing better. But it's a good deal like "locking the stable door after the horse is stolen." The RIGHT way to fight the fly IS TO KEEP HIM OUT OF THE HOUSE ALTOGETHER — **AND NOW IS THE TIME TO DO IT!**

You can't hope to exterminate the flies—not yet. But screen your doors and windows completely NOW —then darken your house on the bright days—and you'll have little or no trouble with flies this summer! We have everything you need for screening—in fact, no other store in Hamilton shows you such a variety at such low prices (complete with hinges, etc.), as we have here for you NOW—ready to go ahead of all the flies.

The above cuts illustrate some of the splendid designs we have for you to choose from in Screen Doors. Made of thoroughly seasoned wood, securely fastened, and only the best grade of fine mesh, rust-proof enamelled wire cloth is used. The solid panel doors are, of course the best to buy—their construction eliminates almost entirely the possibility of troublesome warping—and they are "filled" with varinsh to withstand rough weather.

Window Displays.

A great many dealers do not always use their window space for the display of seasonable goods. In the first place, they do not change the trims as often as they should and in the second place, they regard some lines as unsuitable for window displays. When the time rolls around for these goods to sell briskly, some less seasonable and consequently less salable line is found in the window.

It is not putting it too strongly to state that there is not a single article in the store which cannot be used profitably in a window trim. "I can use anything in the store for window trimming," once confidently stated a clever designer of hardware displays. "Just give me a few rolls of cordage or some lengths of conductor pipe and I'll make something worth while."

It is probably true that a good many dealers would not concede possibilities in household goods for effective display. Consider the broom—It is a mighty instrument in the household, but it is an every-day sort of an instrument and the window dresser, who was asked to construct a display with a bunch of brooms as the central attraction, might be inclined to give it up in despair. However, there are great possibilities in the broom, as witness the clever display shown a few weeks ago in the hardware store of Connell Bros., Edmonton. Arranged on a semi-circular support, the brooms formed a rainbow, holding forth the promise of a clean household to all who purchased.

Spring and early summer are the housecleaning and moving seasons, so that there is a constant demand for brooms, dusters, and scrub brushes. Furthermore, spring is the season of mud; and the need for feet scrapers and door mats is always particularly felt. Considering everything then, this highly effective display was eminently seasonable. After the good results obtained in this instance with brooms, who will be hardy enough to declare that there are certain goods which can baffle the most ingenious of window dressers?

How Not to Do It.

The writer has seen within the last week, a window which contained skates and one which contained mitts and gloves. These can be accepted as samples of how not to do it.

The interior of the store should be kept seasonable. The goods most in demand should be placed where they will greet the eye of the customer. A man is not interested in sleigh bells in May and he will not be interested in the store where he sees sleigh bells. He wants to see the goods that meet his present needs.

Changing Interior Arrangement.

This point was clearly demonstrated by E. J. Hofford, of the Glidden Varnish Co., in the course of a recent letter to Hardware and Metal. To elucidate the matter, we take the liberty of quoting a part of Mr. Hofford's remarks:

"Placing the seasonable article to the front should bring people into the store and most people who enter a store buy more than one article. The live dealer not only knows when to place baseball bats where the boys can see them, but he knows how to make the boys see them and shows them to the best advantage. The progressive dealer continually shifts as much of his stock as he can. He keeps his store going through a continuous change. His old stock, dusted off and neatly arranged in a new place with the addition of a couple of display cards, looks like a new stock. His store looks fresh and is fresh because he sells all his old goods. The whole business has an air of success and is a success. His entire stock is made up of bright, clean, new, well-advertised salable goods. His customers like to buy at the store. He is pushing to the front and in a short time he has the popular store of the town."

Mail Order House in Competition

Prince Albert, Sask.

Editor, Hardware and Metal. — We have from time to time noticed the ways and means adopted by others to overcome the department store business. The following is the way we generally fight them in the West. If the same method were followed in the east, we would very soon have the goods we sell protected. The first question we ask a traveller when he calls is, "Does your firm sell to the department store people?" If the answer is "No," we deal with him. If it is "yes," we bid him good day. We have adopted this method for the past three years, and have cut out all lines handled by the department houses, including some lines we used to sell. We are now never asked for these goods and have not lost any sales as we handle other lines just as good. Get together, you eastern men, and cut out the goods that are sold in this way.

Hardwareman.

Manufacturers of Joist Hangers.

Kent, Garvin & Co., Hamilton, Ont.—"Will you kindly advise us what firms manufacture joist hangers."

Lane Bros., Poughkeepsie, N. Y.; Duplex Hanger Co., Cleveland, O.; Taylor-Forbes & Co., Guelph.

Pinko and Brasso Polishes and Cleaners.

W. F. Mickus, Preston, Ont.—"Where can I procure "Pinko" for cleaning brass buttons, and "Blanko," for cleaning white military belts?"

Joseph Pickerling & Sons, Ltd., Sheffield, Eng., manufacture Blanko. Can any reader supply information about "Pinko?"

Iron Fencing.

The Morgan Hardware Co., Norwich, Ont.—"Kindly give us the names of makers of iron fence to put around dwellings."

Canada Foundry Co., Toronto; Dennis Wire and Iron Co., London.

Saturday Savings Ads. Become General

This Form of Advertising is Now Being Adopted by Many Hardware Dealers—It Originated 11 Years Ago With the Russill Hardware Co., Toronto—Some of the Advantages of This Method—Direct Results Can be Traced.

There has been a marked tendency of late years among hardwaremen to adopt the "Saturday Savings" idea in handling their advertising. The first hardware firm to take up this method of appealing to the public was the Russill Hardware Co., of Toronto. With them it proved so successful that other firms are now following it and are meeting with a considerable measure of success in most cases.

The idea originated with Mr. Russill himself about 11 years ago. He found at that time that the departmental stores were making big headway through the agency of well illustrated advertisements, particularly in dry goods and groceries. The value of illustrations appealed to Mr. Russill, and he decided that they could be used in the hardware business as well. He then planned out the first "Saturday Savings" advertisement, using it in the Toronto dailies. It was an instantaneous success and has been kept up ever since. There can be no doubt of the success of a method which has survived for eleven years.

Mr. Russill has been gradually enlarging his space during that time. He now uses four-column space the full length of the page in four daily papers every Friday. The space is divided off into small panels, each panel being devoted to one article and an illustration. The descriptions are brief and concise and prices are always clearly marked. The heading across the top is invariably the same—"Saturday Savings."

The Price Problem.

The plan followed is to shade prices in some lines. For instance, if an article is sold ordinarily at 65 cents, it may be listed among the Saturday bargains at 59 cents. This price holds good for the one day only.

Mr. Russill states that this advertising shows direct results so markedly that they have never questioned its value. The lines advertised sell heavily each Saturday and, what is more satisfactory still, for several days afterwards.

Other Firms Follow.

The plan has been adopted by other dealers until to-day, nearly every city and town has one hardwareman advertising "Saturday Savings." Among those to take up the idea are some of the best hardware dealers in Canada.

Whole Trade Benefits.

All who have been approached on the subject have expressed themselves as satisfied with results. "It benefits not only ourselves but the other hardware dealers in town," said one man. "I know for a fact that the other dealers find their sales increase in goods which we advertise. You see, people notice the advertisement and are reminded of some article they need. They may not be in the vicinity of our store on Saturday, and so they drop into the nearest hardware store. We don't begrudge our competitors what they get out of it, for we benefit the most ourselves."

A good advertisement of Saturday Savings by the Purdom Hardware, London.

A dealer in a Western Ontario town, who has followed the plan for a couple of years now holds two savings sales each week, on Wednesdays and Saturdays. He advertises them in the same way and finds that his business on both days is heavy. "The advantage of this system," he explains, "is that the two sales keep business running along all week. Trade keeps up until Friday on the impetus given by our advertising for Wednesday's sale and the effect of our Saturday savings announcement keeps business on the move on Monday and Tuesday as well."

One of the chief advantages of the system is that it constitutes a direct appeal to the farm trade. The farmer does all his shopping in the market town on Saturdays and it is not often that he fails to visit a hardware store. When the announcement of "Saturday savings" at a certain hardware store appears in the weekly editions of the newspapers, he gives his attention forthwith. The farmer is a close buyer and that word "savings" has a great attraction for him.

"We have a much larger farm trade now since we have started advertising Saturday sales," declares a hardware dealer in an Ontario city which boasts a large market. "That is where the real value of the idea comes in. Can we trace direct results? Oh, no doubt about that. The ad. brings the farmers to the store."

Moving Slow Sellers.

Another advantage which the method offers is the opportunity to move slow sellers. No matter how careful and discriminating a dealer may be in his buying and how progressive he may be in his sales methods, he is sure to get a certain number of "stickers" on his hands. When a certain line is not selling, the dealer must take some steps to get the goods off his hands before they become shopworn and depreciate in value. What better way to work them off than to include them in the list of Saturday savings?

This is done by a number of dealers and they find it reasonably effective. There is always a certain demand for the "stickers" as well as the more seasonable articles on the list and in time the line can be cleared out.

It is Good Advertising.

Speaking from an advertising standpoint, it is "good stuff." The idea compels attention. The use of illustrations, the distinct marking of prices and the brief descriptions of each article, are all salesmaking factors of rare potency.

The one contestable point is with reference to the price inducements. Many merchants stick rigidly to the principle that it does not pay to cut prices even where the reduction is purely nominal. The objection they raise is that, when a cut price has once been offered, it is difficult to secure the regular price afterward. This objection is met by advocates of the system with the statement that, inasmuch as the special prices are clearly marked for the one day only, people understand that they cannot expect the same inducements on other days.

A Word for the Early Closing Movement

Why Should Dealers Work Twelve or Thirteen Hours a Day?—A Case Where Big Hardware Store Closed on Saturady Evenings and Did Not Lose a Dollar in Trade—Concerted Action Seems to be the Remedy for the Situation—The Present is the Time.

Now that the early summer season has arrived, the question of early closing becomes one of foremost interest. No man likes to spend the summer evenings in a close store if he can help it.

The trouble with the retail dealer is that he fears he can't help it. "If I close early, I'll lose trade," is the bogie which chains him to his counter from 8 in the morning until 10 at night. Sympathy is always extended to the heathen slave; but what slavery is more abject than that of the merchant who spends twelve or thirteen hours a day behind the counter or at his ledger?

It is recognized that every man needs a certain time each day for recreation and ease. The heavy-eyed merchant, locking up shop at 10 o'clock at night, does not dispute the fact that he is working too hard and too long. He feels it in every aching bone. But he has become obsessed with the notion that his business depends upon it. If he were to close up at 6 or 7 p.m. people would have to go somewhere else for their goods, would "get the habit" of going somewhere else, his business would go all to pieces, and so on.

If it were not for the fact that in many localities the dealers have gone together and decided on a mutual basis of early closing, it is doubtful if the movement would ever have made much headway. In some cases, however, courageous individuals have closed down, allowing their competitors to do as they saw fit. They have never suffered by it.

Here is an instance to prove it. The facts have appeared before in Hardware and Metal, but they will bear repetition. The proprietors of one of the largest hardware stores in one of the largest cities in Ontario came to the conclusion that they should not keep open after 6 o'clock on Saturday nights. Saturday nights, please note. They had adopted the early closing plan for ordinary week nights long before.

It takes considerable courage to close a store up all Saturday evening. When stores on every hand are lighted up and crowded with Saturday night shoppers, the one lone store with doors locked looks distinctly "out of it." When the firm in question went into the figures as to their trade, they were considerably shaken in their resolution. The Saturday evening trade, they found, accounted for a very large percentage of their total business. However, they had the courage of their convictions and decided to risk losing that percentage. The store was closed at 6 p.m. every Saturday.

They never lost by it. Business just sort of readjusted itself and then jogged along in the same old profit-making way. Sales during Saturdays increased and the Monday trade doubled. In other words, the people who had been accustomed to doing their hardware shopping on Saturday evenings, either got down town before closing time or left it until Monday. The store did as big a business as ever and had the trade more evenly distributed.

It simmers down to a case of having the nerve to "take the plunge." The public are dominated largely by habit. People may have the habit of leaving their shopping until the evenings, but, if the merchants decided to emancipate themselves from the slavery which late closing entails, shopping before six o'clock would become the general habit in no time. Shoppers adjust themselves to circumstances.

Some Headway Made.

The early closing movement is making some headway, but it is not growing as rapidly as it should. In the large cities, a majority of the stores still remain open. You can buy most anything you want in Toronto at 11 o'clock at night. In the smaller towns, the drudgery of a merchant's life frequently entails attendance at the store for the better part of each evening.

The remedy seems to lie in concerted action. The merchants in one place, or section of a city, engaged in the same line of trade, should get together and mutually agree to close at a certain hour. For instance, if the hardware dealers were to agree that they would close at 7 o'clock, none would suffer, for the public would be compelled to make their hardware purchases before that hour.

There is probably not one retailer who would not gladly accept the chance of shortening his hours, if he could do so without hurting his trade. Complete surrender to business, to the exclusion of all rest and recreation is not a pleasant existence. Concerted action, resulting in a general closing hour, offers a chance to shorten the hours without injuring trade in any way. Why not try it?

The present is an opportune time for action. Pretty soon the evenings will grow long and warm. Outdoors will have an irresistible attraction. Are you going to spend your evenings at the store when an avenue of escape is open?

TO CLOSE EARLY.

St. John, N.B., May 14.—Local hardware dealers with the exception of about three or four are much concerned in the matter of early closing, which is once again agitating store-keepers in this city. A meeting of those interested in the movement was held this week, and those who are promoting the early closing scheme, expressed themselves in optimistic strain that during the coming summer all shops would be closed at 7 p.m. except drug stores, barber stores, liquor stores, and small "corner groceries," such as are kept by widows, etc. At the last session of the local legislature, an amendment was passed upon the early closing by-law which last year was declared ultra vires by the police magistrate here, and it is thought that there will be a more thorough understanding, and a more appreciative trend of sympathy with the early closing movement in St. John. Probably eight or ten hardware and stove dealers are affected by the by-law.

HOLDING "SHOPPING WEEK."

Ottawa, Ont.—A shopping week is to be held here and all stores are joining in the preparations with vim. Stores are being decorated, special window displays are being planned and general preparations are being made to do a big business during the week.

An effort is being made to attract out-of-town buyers and, with this purpose in view, a number of stores are offering to refund fares. Mulhall Hardware Ltd., are making this offer in their four stores.

Complete Course in Sheet Metal Work

By L. W. KOSER

Prob. 10, plate 19, shows a method of getting the pattern for a square pyramid. Fig. 1 shows the plan, Fig. 2 the elevation, Fig. 3 a diagonal elevation, and Fig. 4 the pattern.

First draw the outline A B C D, of Fig. 1, which represents the size and shape of the pyramid at the bottom. Then draw the diagonal lines into the center O. These lines are the hips or corners.

Then erect the elevation Fig. 2, making the line R P the desired height.

Then erect the diagonal elevation Fig. 3, in which the height F V equals the height R P of Fig. 2, and the base line U V W equals one of the diagonal lines on Fig. 1 as B O C.

Then a line drawn from F to U or F to W, gives the true length of the hips.

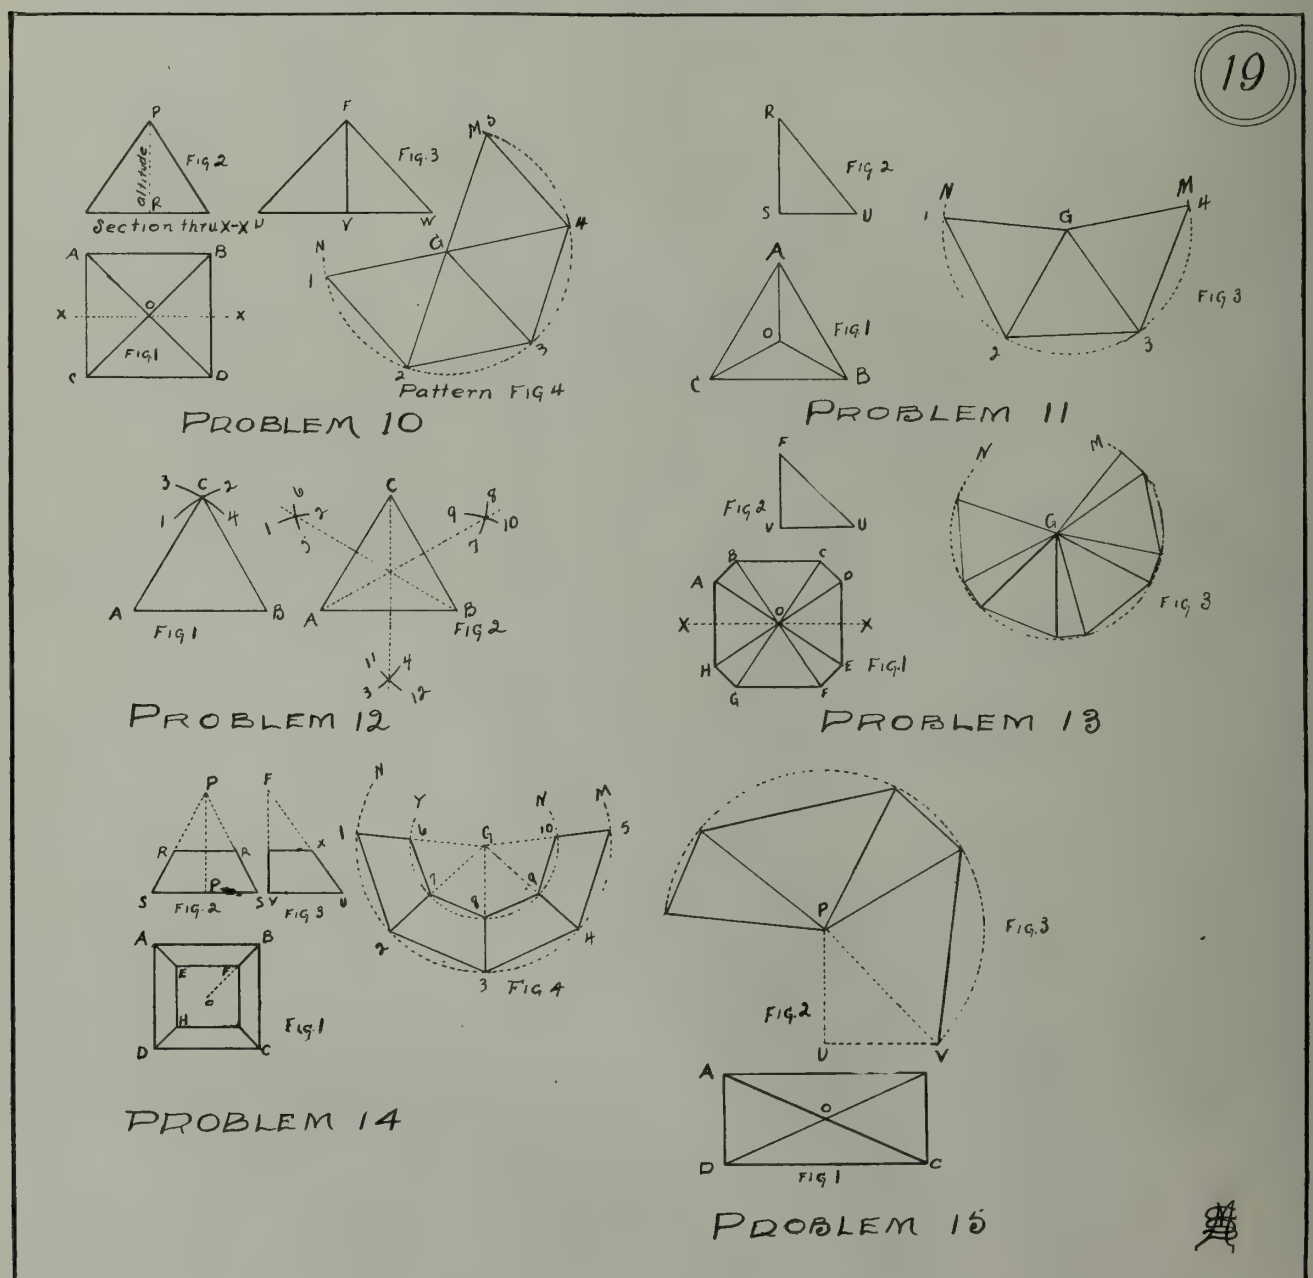
Place the point of the dividers at F and the lead at either U or W, and at any convenient centre, as G describe the arc N M.

Now place one point of the dividers at A, and the other at B. Fig. 1 and transfer this space to the arc N M. Transfer each of the other spaces of Fig. 1 to the arc N M, as shown by 1, 2, 3, 4, and 5.

Draw a straight line from 1 to 2, 2 to 3, etc., as shown. Then draw lines into the centre G, and bend the pattern on these lines.

Allow for lap or fold, the size of which varies according to the size of the article wanted.

Prob. 11 represents a triangular or three-sided pyramid, and is developed in practically the same manner as prob. 10.



First draw the outline A B C, of Fig. 1. Then find the centre and draw the lines into same as shown by A O, B O, and C O. (See prob. 12.)

What we want to get now is the true length of the hips, so we draw the lines S U of Fig. 2, making it equal in length to any one of the hip lines as A C.

Then we erect the vertical line S R, making it any height desired.

Then a line drawn from R to U gives the desired length of the hip.

Set the compass to this space and with either R or G as a centre describe the arc N M, and lay off on this the sides of the triangle. The total distance around any straight-sided figure is called its "herimeter."

Progressive Hardware Retailing

"Shopping Week" is Being Held at Ottawa—Western Firm Hold a Reception for Mechanics—Hot-Point Day—A Strong Case Made Out in Advertisement of "Life Preservers" Sold in Hardware Stores.

MAKING STRONG CASE.

Moose Jaw.—Under the heading "Three Life Preservers," the A. E. McKenzie Co., are advertising water filters, refrigerators and gas ranges. They say in part:

"What we eat and what we drink sustains our lives. But hygienic methods of preparing our food, as well as preserving it in a sanitary way while in process is an easy ninety-nine per cent. of life preservation."

"We have the exclusive right to sell in Moose Jaw three of the most scientifically constructed food-preparing and food-preserving mechanisms known to the 20th century. We mean this for a strong statement and are prepared to prove it. Call and see them and be convinced by your own senses."

The advertisement takes up two columns the full length of the paper with forceful copy relating to the three articles. In regard to the refrigerator, they quote the medical health officers of a number of Western cities, to show the sanitary qualities of the same.

HOT-POINT DAY.

Fredericton, N. B.—James S. Neill & Sons, Ltd., one day this week observed what they termed a "Hot-Point Day," and the results which they obtained were quite satisfactory, owing largely to the originality of the idea, and the advantages offered. Their customers were advised that on that day "a rare opportunity would be given them, which they certainly could not afford to miss. On Hot-Point Day there would be sold at exactly half-price, a three-pound hot-point electric flat-iron. Its cost would ordinarly be $6.00, but on that day alone the reduced cost would be $3.00."

HELD RECEPTION FOR MECHANICS.

Vancouver, B. C.—The importance of featuring tools is recognized by Kydd Bros., hardware dealers, as evidenced by the special efforts they have been making in this branch of the hardware business. The mechanic is always keenly interested in a good tool and nothing interests him more than a display of tools or a chance to inspect an assortment. Realizing this, Kydd Bros. held a special reception for mechanics from 7 to 10 p.m. last Saturday evening, the feature of the evening being a demonstration of a number of the latest tools. Expert representatives were secured from various manufacturing firms to give a demonstration of their products and the time was pretty well occupied in this way. Five experts were in attendance.

A large stock had been placed on display, the lines shown including stonecutters' mallets, mitre saws, chisels, loggers' striking hammers, stonemasons' hammers, bricklayers' levels and trowels, blacksmiths' driving hammers, riveting hammers, one-man crosscut saws, as well as carpenters' and machinists' tools and all varieties of builders' hardware.

There was a large attendance, the store being filled with men, not only between the hours set for the reception, but at all other times of the day as well. It is understood that the sales were eminently satisfactory.

Kydd Bros. are moving into a new store shortly, and by holding the reception they were "killing two birds with one stone." Not only did they arouse a big interest in the tool question, but they reduced their stock in preparation for their removal.

WELL-ATTENDED DEMONSTRATIONS.

Seaforth, Ont.—The Seaforth hardware stores have been making business hum this week. On Tuesday and Wednesday, G. A. Sills had a demonstrator to prove the great merits of varnishes and stains.

Henry Edge also made a stir in the hardware world. He had his opening days on Wednesday and Thursday and had experts in attendance demonstrating the merits and advantages of his stoves. This was done in a very practical way and visitors were furnished with refreshments prepared on some of the stoves and ranges on sale. The visitors were also regaled by pianola music.

Both stores had many visitors to see the special displays.

OTTAWA SHOPPING WEEK.

Ottawa, Monday, May 13.—Five hundred and twenty-five excursionists on the New York and Ottawa line arrived in the city a little after ten o'clock this morning—the first arrivals to take advantage of the bargains offered and also the refund of return railway fares by the local merchants during shopping week.

The visitors came from as far south as Cornwall, and at Black River, Harrison, Northfield, Newington, Finch, Berwick, Crysler and all the stations, in fact, between there and Central station, passengers boarded the special train.

There are a good many other excursions, both by boat and rail from all points in the Ottawa Valley.

Women alone did not make up the entire number of passengers. There were nearly as many men aboard as there were women. Quite a few children accompanied their parents and in their midst appeared one clergyman.

One excursionist explained the large number of men in this way:

"Well, you see, it was a good chance to get a holiday in the city, so when our wives wanted to come we came along with them and while they are done their shopping we will take in the sights."

The shoppers will find the stores tastilly decorated and genuine bargains displayed. They will no doubt go home with their suitcases, valises, etc., filled to overflowing with bargains and goods that will make them happy.

A New Store.

Calgary, Alta. — A. McBride & Co. have moved into their new store at Tenth avenue and Third street east. The building is three storeys in height and plans are already being laid to put on three more storeys. It has a frontage of 50 feet and runs back 120 feet. When completed, the cost of the building will be $75,000. It is built entirely of concrete, floors and all.

BRASS WORKS MOVED.

The Hamilton Brass Manufacturing Co., Hamilton, are removing to 21 Walnut street.

Current News of Hardware Trade

To Close Early.

Hespeler, Ont.—The merchants have again decided to close their places of business for half a day during June, July and August, but this year will close on Wednesday afternoons instead of Thursday as formerly.

Earl Construction Co.

Athens, Ont.—The business of W. F. Earl is being continued under the name of the Earl Construction Co. The new company will manufacture Earl acetylene generators, odorless sanitary closets and other lines and will also continue in the retail hardware and plumbing business.

Found Business Brisk.

W. S. Fisher of Emerson & Fisher, St. John, N.B., and of the Enterprise Foundry Co., Sackville, N.B., has returned from a business trip through the West. He reports that he found conditions exceptionally brisk wherever he went. Mr. Fisher stopped off at Toronto on his way east again and was a welcome visitor at the office of Hardware and Metal.

Touring Canada.

W. Vernon Mitchell, representing James Cartland & Son, Limited, Bradd Foundries, Birmingham, is again in Canada calling upon customers of his firm and exhibiting a particularly full range in the furnishing art metal and general builders' hardware. Mr. Mitchell intends going right through to the Pacific Coast. Many friends in Canada will be pleased to see him there again.

Rutledge-Chapman.

The marriage was solemnized at London, Ont., on Thursday, May 9, of Laura Eloise Chapman, daughter of John H. Chapman, to Gordon Rutledge, of Montreal, eastern editor of Hardware and Metal. Mr. and Mrs. Rutledge left for a honeymoon trip to New York.

Mr. Rutledge is well known to the hardware trade through his connection with this paper and many friends will extend heartiest congratulations.

Improving Stores.

Gull Lake, Sask.—Hutchinson's hardware store is being improved by the installation of a complete metallic fronting. Busse Bros., hardware and implement dealers, are also improving their store premises.

Wallaceburg, Ont.—Munroe & Zavitz are having a new front built to their hardware establishment. This time there are two windows, with the door between, instead of the one large window with the door at the side.

Fire Losses.

Winnipeg, Man.—J. C. Wilson, tinsmith, has suffered a loss by fire. The loss will be about $3,000.

Officer of Club.

Milton Carr, hardwareman of Cobalt, is one of the prominent members of the recently organized "New Ontario Retail Hardwaremen's Club." At the organization meeting at North Bay on Good Friday, he was elected as a member of the executive.

Milton Carr, Cobalt, Member of Executive of New Ontario Retail Hardwaremen's Club.

New Retail Firms.

Winnipeg, Man.—H. Paul & Son have started in the sheet metal business here.

Winnipeg, Man.—Fraser & Magel have opened a plumbing business.

Bengough, Sask.—Frank Humphrey has opened up a hardware store.

Saskatoon, Sask.—Beaton & Brady are starting in the plumbing business.

Elkhorn, Sask.—The J. J. Fallis Hardware & Implement Co., of Elkhorn have been incorporated.

Briercrest, Sask.—A hardware and plumbing business has been started here by Chenworth & Young.

Cupar, Sask. — The new hardware store of Mr. Pechet is now in course of erection. It will be opened shortly.

Business Changes.

Cupar, Sask.—Mr. Shepherd, of Meldrum, Ellis & Shepherd Co., hardware and implement dealers, has sold out his interest in that concern.

Pelly, Sask.—R. C. Brown has been succeeded in the hardware business by Bay & Katz.

Vancouver, B.C.—Kolonski & Walker, sheet metal workers, have dissolved partnership.

Bedford, Que.—McNamara & Jones, hardware dealers, have dissolved partnership.

Girvin, Sask.—A. Moulton has disposed of his hardware store to George Hemme.

Scott, Sask.—S. S. Beebe & L. R. Beebe have dissolved partnership. They have been conducting business under the name of the Scott Hardware Co. L. R. Beebe will continue the business.

Webster, Sask.—Dingman & O'Connor, dealers in hardware and implements have dissolved partnership. W. Dingman will take the hardware end of the business and D. O'Connor the implement end.

Donalda, Alta.—S. K. Holton has taken over the business of the E. W. Grice Hardware Co.

Ramsack, Sask.—T. Miles, hardware and furniture dealer, has sold his hardware department to J. G. Hallson.

Hickson, Ont. — Richard Nicholson, hardware dealer, has sold out.

Wawansea, Man. — Couling & Co., hardware dealers, have disposed of their business to W. S. Peters.

Clinton, Ont.—J. T. Harland has taken over the hardware business of Harland Bros.

Belleville, Alta.—Burnett & Laing have sold their hardware department to the Crow's Nest Pass Hardware Co.

Three Hills, Alta.—C. H. Conrad, hardware dealer, has sold out.

Personal Notes..

Charles Stewart, of the James Stewart Manufacturing Co., Woodstock, was in Toronto on Tuesday, and visited the office of Hardware and Metal. He is taking a short trip accompanied by Mrs. Stewart.

Montreal Trade Notes.

C. C. Ballantyne, vice-president of the Sherwin-Williams Co. of Canada, has left for a tour of inspection of all the company's factories and warehouses throughout Canada.

Congratulations were the order of the day in the office of Lewis Bros. this week when C. J. Walker became the father of a bouncing baby girl.

George Caverhill has returned to Montreal from Europe.

Stoves, Furnaces and Accessories

Furnaces Out--Water Heaters in Demand

This a Splendid Time to Push the Sale of Instantaneous Heaters—This Can Be Done by Advertising, by Personal Letters, and by Good Window Displays—Must Make the People Think of Heaters.

In so many cases the people come to the sanitary engineer, that the sanitary engineer is in danger of forgetting that it is often to his advantage to go to the people.

This is a time of year when there is a great deal of plumbing being done. It is also a time when people are moving. It is, therefore, a season when new bath room accessories are in demand, and when business can be secured by arranging attractive displays of these. It is not sufficient to have a stock, so that a customer may be accommodated when he asks for a certain article. The successful dealer must also put the thought of the article into the customer's head. A dealer is not expected to supply the people with brains, but it is to his interest to provide something for the brains to work upon.

A Seasonable Line.

By showing accessories people may be led to think that they need some such articles as are shown. But more than accessories might well be brought forward at this time. Water heaters, for instance, will be well worth displaying in the next few weeks.

This is the between seasons. In some districts people are wondering whether they should allow their furnace to go out. Those who have babies or young children are deciding against this. Others—especially those who are blessed with some open fire places—are dismissing the furnace man, or are taking a rest themselves. The warm weather is about here and furnace fires hardly seem necessary.

This is the thing which makes the present an opportune time to bring water heaters prominently forward. In many cases the discontinuance of the furnace means a discontinuance of hot water. Now heat may not be wanted in the rooms, but heat—in a certain degree— is a very desirable thing in water. This is the off-season for the use of coal, but it is not the off-season for baths. And while there are those who declare they love a cold plunge, the majority of us are only poor weak mortals after all, and are exceedingly pleased that it is possible to take our dip in water from which the chill at least has been removed.

The People Are Interested.

But to remove that chill is the thing. If the furnace has been discontinued, it means that there will either be cold water, or that some other means of heating the water must be adopted. Ergo it is evident that people will be interested in suggestions of heating methods.

There are a number of ways in which water can be heated and taken to the bath room. One is to light the stove, fill the kettle, and when the water is heated take it up to the bath room where, mixed with the cold water, the proper temperature may be secured.

But this means work. It is not a pleasant thing to walk down stairs of a morning, light the fire, and then have ample proof of the truth of that old saying, "a watched kettle never boils."

What Must Be Shown.

This is a luxury loving age. People not only want warm water for their bath but they want to be able to get that warm water easily. Some, for economic reasons, may continue to carry up their hot water from the kitchen; but there are a great many who will be glad to buy one of the quick heaters now upon the market, if they can be shown that these will give them the service which they desire, and at a fairly reasonable price.

There are a number of water heaters. Some are located in the cellar, near the furnace, though not in any way connected with it. They are admirably suited to some households, but perhaps are less handled by dealers than are the heaters which may be installed in the bath room. These heaters, moreover, appeal especially to those who will be letting their furnaces go out early. They mean that hot water can be obtained quickly and without any trouble. With the heater in the cellar it is necessary to go down there to turn on the gas which does the heating. Where the heater is in the bath room, on the other hand, the water can be started heating as preparations for the bath are started. Such a convenience is bound to appeal to all.

There can be no doubt that a great number of people will be disposed to look favorably upon the suggestion that they should get an instantaneous heater. This being so, the question resolves itself into how best to make the suggestion. Of course, there are a number of ways. One is for the dealer to write letters to those for whom he has done work and those whom he knows have not already got an instantaneous heater. This has been tried by several dealers, and has brought good success.

There is then the plan of advertising. And this, too, has brought results. Advertising always does if it is done wisely.

But whether circulars be sent or not; whether the hardwareman advertises or not, he should attempt to do something to make his store speak of instantaneous heaters. One man has arranged a forceful window display. He has equipped a small bath room in his window. In it there is the enamel bath, and beside the bath the instantaneous heater. Printed cards point out that hot water can be secured in a moment by the use of this heater.

Value of Wagging Tongues.

Such a display causes people to pause. It is an object lesson. It holds the attention of the Missourians as a newspaper advertisement will not. It is not as far reaching as good printers' ink, yet the influence of a window is hard to trace. If the trim be good, people are started talking; and tongues once started it is impossible to say what the result will be.

Yes, this is a fine time of the year to advocate the purchase of instantaneous heaters. Perhaps hardly enough dealers are handling such lines. Those who are—and their number is large even if it should be larger—are reaping profits. Those who are playing their cards in the best way are reaping large profits.

TO INCREASE PLANT.

Owing to the great demand for their products, the Benjamin Moore & Co., Toronto, have found it necessary to increase their facilities. A new addition to their factory will be commenced early in the fall.

Company Incorporated.

The Manitoba Gazette contains notice of the incorporation of the Aikenhead-Clark Hardware Co., Thos. E. Aikenhead, president, with a capitalization of $40,000.

Weekly Market Report --- Metals

COPPER HIGHER.

The feature of the metal market has been an advance in copper. Tin is also very firm, although no change has been made in the price.

Business generally is very brisk in all metals.

MONTREAL.

Montreal, May 16.—The metal markets have not changed materially since last week, the only change being in copper, which has advanced half a cent a pound. The opening of navigation has stimulated trade to a great extent; as it is possible that some buyers have been waiting for cheaper rates before purchasing. Shipping has not yet reached its full activity, however, and it is to be expected that an even greater volume of business will be done during the coming weeks.

Copper.—The scarcity of this metal, which has been apparent during the past weeks, shows no sign of abating; that is, if it can be properly called a scarcity. There appears to be a goodly quantity of copper around, but the consumption is so large that, should the sources of supply for any reason show a falling off, a scarcity would be at once apparent. High prices still prevail, and this week copper is quoted at 18c, which is an advance of ½c over last week's price. The high price which is now being obtained for this metal has resulted in the re-opening of a number of mines producing low grade ore. The proprietors found it impossible to mine this ore at a profit while prices were low, but at the prices which prevail at present, it is thought work can be done on a profitable basis. If these people have confidence enough to start work again on the basis of present prices, it is not very likely that cheaper copper may be looked for in the near future.

Tin.—"Tin is still kiting," said one jobber, in speaking of conditions in this market. It would certainly take a prophet to tell what next might be expected of this metal. Some shipments are being received from England, but stocks are none too large here. The prices remain unchanged from last week.

Pig Iron.—This market remains unchanged, as far as price is concerned, from last week. Large consignments have been received by steamer, and the demand is reported to be fairly good. Consumption is fairly heavy, but supplies at the present time are quite adequate.

Spelter.—There is none too much spelter to be had just now, and stocks are said to be a little on the low side. The demand remains about the same, and no change in price has been heard of.

TORONTO.

Toronto, May 16.—The upward trend in metal prices has been steadily maintained. Although the only metal to actually advance has been copper, extreme firmness is noted in others. Tin is strong and lead is very firm.

Supplies are not too large, although the very marked shortages in some lines have ceased to exist. As the demand continues brisk, it is assumed that stocks will not gain in size, although no more anxiety is felt.

There is a good tone to trade all around. Those in close touch with the market state that conditions have never been better. Steel and iron is largely in demand for railway and structural work.

Tin.—The price of tin is still quoted around 50 cents, although some are askink higher than that. Demand is reported to be good. Tin has been exceptionally high now for some weeks, and much speculation is being indulged in as to the probable future of the metal.

Reports from the primary markets show that there has been no sign of a break. Prices have continued to advance, and the temporary reactions which usually feature an advance have been conspicuous by their absence. In regard to this point a despatch from New York reads: "Market is irregular to-day, but not unnaturally so, considering the advance which has taken place; in fact, the absence of the usual reactions, which has been quite noticeable, is probably accounted for by the movement being free from much of the usual speculative character."

Copper Advances.

Copper.—When copper declined a little early last week, many freely predicted that the end of the upward trend had been reached. However, copper can "come back." This was clearly demonstrated this week when the price was advanced to $18.00, the highest level yet attained. There is every evidence that the strength of the copper situation will be further demonstrated in the near future.

This may be due to the fact that the consumption has been sufficiently heavy to reduce the visible supply. The visible supply of copper on May 1, 1911, was 340,428,228 pounds for America and England combined; on May 1, 1912, it had been reduced to 176,573,229 pounds, or almost cut in half. Even allowing for an increase in consumer's stocks the world's supply of copper has been reduced very heavily.

Antimony.—The situation is very quiet in antimony, although there is a fairly good demand.

Lead Continues Strong.

Lead.—The situation has not changed in any way. Frmness is still noted in the price. Stocks are still light and promise to remain so in the face of the heavy demand, which is steadily maintained.

The lead situation on the primary markets is not as satisfactory. It has been dull and featureless for some time, despite the fact that the consumption has been quite up to the normal. Locally there is a heavy demand.

The "Metal Market" in commenting on the situation at New York says:

"We have on several occasions compared the weak and unsettled condition of the lead market with the buoyant conditions prevailing in other metals, and we have wondered whether the consumption of lead was relatively any different from the consumption of copper or tin or spelter which are supposed to be the best on record. We have taken some pains to investigate, and our investigations lead us to believe that the lead consumption is quite up to normal. For instance, the consensus of reports from the white lead industry—which accounts for the bulk of the lead consumed in this country — indicate that the demand for white lead is better than at any time in two years, and very much better than in 1911. The same is said by other consumers, therefore the weak market must be due to some other cause. The fear of new competition may have something to do with it."

Some Spelter in Sight.

Spelter. — The shortage has ceased to exist in spelter, although stocks are still very light. However, it is possible to obtain the metal, and orders are being filled again.

Plates and Sheets.—Trade is satisfactorily brisk, with no price changes to note.

Khedive, Sask.—The hardware and general store business of M. Fladager & Co., has been taken over by J. L. Farnum.

Weekly Market Report --- Hardware

FEATURES OF MARKET.

The cold weather has retarded trade to some extent but the wholesalers are not complaining as business is still brisk. They anticipate a marked stimulation in the demand as soon as normal weather conditions are restored.

MONTREAL.

Montreal, May 17.—The fine summer-like weather which prevailed during the past week has proved to be a benefit to the hardware trade, judging by the amount of business which the various wholesale houses report. The opening of navigation has undoubtedly helped to stimulate trade, which gives every primise of breaking records. Travelers report that the retailers are showing great confidence and are buying freely. Builders' hardware has been in strong demand, and judging by the report recently issued by the Builders' Exchange, which shows that this will be a record year for building operations in Montreal, a splendid business in these lines may be looked for.

General housecleaning lines have been moving well, while a number of sorting up orders have been received for seasonable goods, hose, mowers, freezers, ice tongs and hammocks being most prominent.

As far as prices are concerned, no changes have been made, and they therefore remain the same as last week in every department.

Household Goods.—Tubs, pails and washing machines are going out in good numbers, while the orders for screen doors and windows show that the pest is expected to be just as troublesome this year in spite of many "Swat the fly" campaigns.

Seasonable Lines.—The demand for summer lines is making itself shown in good style. Many sales of refrigerators have been made, and lawn mowers are also well to the fore.

Builders' Hardware.—This is the line which has been getting the most attention recently. Good demand has been shown for practically every line required by the building trade. It is not always that a real estate boom is accompanied by a building boom, but at the present time both are in evidence here and show good signs of continuing.

Harvest Tools.—Warm weather, and consequently better roads have caused more activity by the farmers in buying, and the sales of these goods are reported to be improving. The season is said to be fairly well advanced in some districts, and business appeared to be quite satisfactory.

TORONTO.

Toronto, May 16.—Whatever ground was lost during the past few weeks as a result of the backward weather is now being regained. Business is brisk. Still the weather conditions are far from favorable yet and it may be that trade is not quite as good as it would be if warmer weather were to set in. The jobbers are not complaining, however, they are kept busy and they are counting upon a very heavy rush of business as soon as real warm weather arrives permanently.

No price changes have been made during the past week.

Seasonable Goods.—There is a heavy demand for summer goods. Dealers who have held off from ordering on account of the cold weather are coming into the market, convinced probably that the summer cannot hold off very much longer. There is a first-class demand for screen doors, garden hose, clamps, couplings, sprinklers, nozzles, rakes, wheel barrows, lawn mowers, shears, spades, picks and the many other articles of the same nature which are required for gardening work.

Orders are now being placed for awnings, shades, verandah screens, hammocks, lawn seats and other strictly summer lines.

Household Goods.—Demand is veering to the lines which warm weather brings to the front. The refrigerator trade is breaking all records. Heavy sales have been made, and it is noteworthy that the demand for the larger and better grades has increased to a marked degree. Jobbers state that they have already sold so many refrigerators that it is absolutely certain that the sales record of last year will be far outdistanced.

A good demand is reported for ice cream freezers.

It is quite apparent that the retailers are still finding a ready sale for goods which are needed at housecleaning and moving time, for repeat orders are still being received by the jobbers. Most orders, of course, are small but the general volume of trade in these reaches a satisfactory total.

Builders' Hardware.—Perhaps the most conspicuous increase in business is in builders' hardware. Building operations are being carried on with such vigor that the retailers are disposing of large quantities. The tool trade has continued very brisk also.

Cement is selling in good bulk and there has been an almost abnormally large demand for building paper and roofing.

Heavy Hardware.—Business continues brisk. No difficulty has yet been experienced in making shipments, although the transportation problem is still serious.

Sporting Goods.—The demand has been heavy during the past week. There has been a steady call for baseball and lacrosse supplies. Dealers are now stocking up briskly in these and all other lines. Canoes and paddles are reported to be selling well. Trap-shooters' supplies, rifles and ammunition are selling in better volume now.

Use of Hamilton Armouries Obtained

The announcement is made that final arrangements have been completed with the officers commanding at Hamilton for the use of the drill hall for the exhibition of hardware goods to be conducted next February by the Canadian Hardware Manufacturers Exhibitors Limited, in connection with the annual convention of the Ontario Retail Hardware and Stove Dealers' Association.

This means that Hamilton will be the convention city for 1913. At the joint meeting of the executive officers of the manufacturers and retailers held in April, the choice of Hamilton was made, pending the securing of the use of the armouries. With this now obtained, the matter is definitely settled, and Hamilton will be the scene of the hardware gathering next year.

Mr. James, of James & Reid, Perth, Ont., was a visitor to Montreal during the past week.

James Pender, of the James Pender Co., Ltd., St. John, N. B., manufacturers of wire nails, was in Montreal this week on his way to the Pacific coast. Mr. Pender is interested in a number of patents which he is having registered.

Weekly Western Market Report

Business Conditions Are Reported to be Excellent—An Urgent Demand Noted for Gas, Gasoline and Oil Cooking Stoves—Lead Pipe Has Advanced, Owing to a Shortage in Stocks.

The demand for all kinds of seasonable hardware is reported to be satisfactory and salesmen are already booking up fall orders on a large scale.

So urgent has been the demand for gas, gasoline and oil cooking stoves that the supply in the city is practically exhausted.

Prices are firm, the only advances being in lead pipe and white lead and both raw and linseed oil have advanced.

The building programme of the city is increasing by leaps and bounds and the demand for all lines of building hardware is much in excess of the corresponding period last year.

Barb wire is also beginning to move freely but it will be a couple of weeks yet before this line becomes particularly prominent.

Heavy Hardware.

Lead pipe has advanced 20 cents and lead waste 15 cents since last report. This is accounted for by a shortage of stocks resulting from the recent coal strikes in Great Britain.

General Hardware.

There are no changes to report in current prices which are firm. There is a little better than average demand.

Winnipeg Hardware Quotations.

Ax Handles—Oval and octagon, s.g. hickory, $3.50; No. 1, $2.40; 2, $1.95; p.g. oak, $2.90.

Augur Bits—"Irwin" bits, 47½; other lines 70 and 10 per cent.

Barb Wire.—Lyman 4 pt., $1.85 f.o.b. Fort William; $2.26 per spool of 80 rods f.o.b. Winnipeg; Guidden 2 pt., $1.75 f.o.b. Fort William; $2.12 per spool of 80 rods f.o.b. Winnipeg; Baker 2 pt., $1.73 f.o.b. Winnipeg; Waukegan, 2 pt., $1.74 f.o.b. Fort William; $2.12 per spool f.o.b. Winnipeg; Alberta 2 pt., $1.73 f.o.b. Fort William, $2.05 per spool, f.o.b. Winnipeg; American special, 2 pt., $1.45 f.o.b. Fort William; $1.73 per spool f.o.b. Winnipeg; plain twist, $2.80 f.o.b. Fort William, $3.20 per 100 lb., f.o.b. Winnipeg; coil spring wire, No. 9, $2.07 per 100 lbs., Fort William; $2.50 at Winnipeg.

Bolts—Carriage, ⅜ and smaller, 65; 7-16 and larger, 55; machine, ⅜ and under, 60 and 5; 7-16 and over, 55; machine set screws, 65; plough bolts, 50; square and hexagon nuts, cases, 3; small lots, 2½; stove bolts, 77½.

Bar Iron—Bar iron, $2.50; Swedish iron, $4.25; sleigh shoe steel, $2.65; spring steel, $3.40; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $8.50; Jessop, $15.

Blocks—Steel, 50 per cent.; wood, 60 per cent.

Cut Nails—$3.15 per keg base.

Wire nails, base, $2.80 Winnipeg; $2.35 Fort William.

Copper—Sheet and planished copper, 30c per lb. Tinned, 24c. Copper wire, 3-inch gage, 24c, to 20-inch gage, 29c.

Crowbars—4½c per lb.

Corrugated Iron and Roofing, etc.—Corrugated iron, 28 gauge, $3.87; 26 gauge, $4.18; pressed standing seamed roofing, 28, painted, $2.84; 26, $3.24.

Canada Plates.—Half-polish, 6 and 7-inch, $3.40; 8-inch, $3.60; full polish, 6 and 7-inch, $4.25; 8-inch, $4.50.

Clevices—7½c per lb.

Enamelware—Canada, 50; Imperial, 60; Premier, 50; Colonial, 60; white, 70 and 5; diamond, 50; granite, 60 per cent.

Files—American, 75; Black Diamond, 60; Nicholson's, 65 per cent.

Galvanized Iron—Apollo, 16 gauge, $3.80; 18, $3.85; 20, $3.90; 22 and 24, $4; 6, $4.20; 28, $4.60; 30 gauge or 10¾ oz., $4.80; Queen's Head, 20, $4; 24, $4.20; 26, $4.60; 28, $4.80.

Galvanized Iron Pipe—⅜ in., $3.25; ½ in., $4.05; ¾ in., $5.00; 1 in., $7.20; 1¼ in., $9.80; 1½ in., $11.80; 2 in., $15.30.

Galvanized Ware.—37½ p.c.

Grindstones—Per 100 lbs., $1.65.

Horseshoes—"M.R.M." and "Bell" iron, No. 0 to 1, $4.90; No. 2 and larger, $4.65; snowshoes, No. 0 to No. 1. $5.15; No. 2 and larger, $4.90; steel No. 0 to 1, $5.35; No. 2 and larger, $5.10; featherweight, $6.50.

Horse Nails—"M.R.M." cold process—No. 3, $4.30; 4, $3.80; 5, $2.75; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

Harvest Tools—50, 5 and 5 per cent.

Hinges—Light T and strap, 65 per cent.

Hooks—Brush, heavy, per dozen, $8.75; grass, $1.70.

Iron Washers—Full box, 40 per cent.; smaller lots, 35 per cent.

Iron Pipe, Black—⅛ in., $3.15; ¼ in., $2.30; ⅜ in., $2.35; ½ in., $3.15; ¾ in., $3.80; 1 in., $5.45; 1¼ in., $7.45; 1½ in., $8.95; 2 in., $11.55; 2½ in., $18.40; 3 in., $24.15; 3½ in., $32.25; 4 in., $36.75; 4½ in., $42.50; 5 in., $47.50; 6 in., $61.50; 7 in., $95.50; 8 in., $118.

Logging Chain—¼ in., $7.50; 5-16 in., $6; ⅜ in., $5.50.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Poultry Netting—57½ per cent.

Pig Lead.—$4.75. Lead Pipe—$5.85.

Lead Waste—$6.85.

Rivets and Burrs—Iron rivets, 55 per cent.; copper, No. 8, 30c; 10, 32c; 12, 34c; copper burrs, No. 8, 40c; 13, 43c; 12, 46; copper rivets and burrs, No. 8, 31c; 9, 32c; 10, 33c; coppered, No. 8, 17c; 9, 17½c; 10, 18c.

Rope — Sisal, 8¾; Pure Manilla, 10½c; British Manilia, 9c,; lath yarn, 9¼c.

Staples.—Bright wire, $2.50 F.O.B. Fort William; $2.90, Winnipeg.

Steel Squares—40 off new list.

Shovels—Discounts on No. 1, No. 2, 60 and 2½ p.c.; No. 3, No. 4, 50 and 2½ p.c.; No. 1 scoops, 50 and 6 p.c.; all other grades, 45 and 5 p.c.; fifty cents per dozen net is added to equalize eastern freights.

Solder—Half and half, $28 per cwt.

Screws.—Bright iron round head, 82½ and 10 p.c.; flat head, 87½ and 10 p.c.; round head, brass, 72½ and 10 per cent.; flat head brass, 77½ and 10 per cent.; coach, 65 per cent.

Staples—Bright wire per cwt., $2.50 at Fort William, $2.90, Winnipeg.

Paints and Oils.

Although business in paints, oils and painters' supplies is quite up to the average, a decided improvement may be looked for with the advent of brighter and warmer weather. Linseed and boiled oil have advanced 5 cents per gallon and white lead has also stiffened in price.

Linseed Oil.—Raw, per gal., $1.05; boiled, per gal., $1.08.

Turpentine, per gal., barrel lots, 80c.

Dry Colors.—White lead in ton lots, decorators' pure, $7.50; decorators' special $7; in small lots advance price 25 cents per cwt.; red lead, kegs, $6.50; yellow ochre, in barrel lots, 2½c; less than barrel lots, 3c; golden ochre, barrels, 3½c; less than barrels, 4c; Venetian red, barrel, $2.50; less than barrels, $3.00; American vermilion, 15c; English vermilion, $1.00 per lb.; Canadian metallic oxides, barrel lots, 3a 3½c; English purple oxides, in casks, 3½c; less quantities, 4c per lb.

Putty.—Casks, $2.90 per cwt.; bladders in barrels, $3.15; bladders, 100-lb. cases, $3.40.

Paris Green.—22 cents per 112-lb. drums.

Methods of Retailing Paints and Varnishes

Improving Your Trade in Paint

Some Pointers for Dealers Who Desire to "Liven Up" Their Paint Department—Why Publicity is Needed—Display in the Store is an Essential Point—Knowing the Goods is the Biggest Asset a Salesman Can Have.

"My paint department has been paying fairly well, but not as well as I feel it should," stated a retail hardwareman recently. "What do you think I should do to liven business up?"

This question is one which is frequently asked by dealers and an answer will, therefore, be of interest to all. It should be stated at the outset that the question propounded is not an easy one to answer. Conditions differ in stores. One man's lack of success may be due to one thing while another merchant may be failing to get results from an entirely different cause. There are certain rules, however, which, if followed conscientiously, will bring results in every store and every locality. The answer to this particular dealer's question can best be given by reciting some of the fundamental rules of good paint salesmanship.

The first rule that crosses the mind is the necessity for publicity. Paint cannot be sold in as large bulk as it should be when the dealer keeps his stock out of sight. Remember this: The average person does not appreciate the need for paint. If nothing is done to show him the error of his ways, a man will let his property go for years without a touch of paint. Therefore, if the dealers do not keep paint before the public gaze continuously, the demand will be correspondingly small. When the dealer does not push sales, he gets just such orders as may happen to come to him. It is, of course, impossible to give any statistics on the subject, but it is safe to assert that for every paint sale which results from the unassisted initiative of the property owner, two sales can be made if the dealers endeavor to create a demand.

In other words, the dealer can by force of exertion and force of publicity, make his paint business double what it would be if he were to make no effort whatever. This may seem a rather sweeping statement to make, but, in the writer's opinion, it is not too strong.

Publicity Measures.

One of the first considerations is **to put the paint stock where it will be seen.** A shelf at the back will not do if the store is so long that the rear is not clearly visible from the front. In some establishments the paint stock is kept at the back, and is so effectively displayed that no fault can be found with the arrangement. But in the average store, the back is not suited for this purpose. The paint is lost to view and is given no chance to advertise itself.

It is a pleasure to step into a store and see clean rows if fresh looking paint tins occupying a prominent place on the shelves. A paint tin seems to radiate an indefinable quality of attractiveness. It seems to assert: "I have bottled up within me the power of creating cleanliness and beauty wherever I am used." This may seem fanciful, but it is not beside the mark. The sight of a paint tin and brush bring to the average man's mind the suggestion that his home needs some freshening up. He remembers that his front porch is beginning to look pretty shabby and that the hall floors have been scuffed bare. but if he did not see paint and brushes in the hardware store whenever he called, it is not likely that the shabbiness of the front porch or the bareness of the hall floors would make such an impression on him that he would think to buy the necessary supplies. He needs a reminder **when he is in the store.** "A hint in the store is worth two at home."

Before proceeding to take up another point, it would be as well to make some reference to the wisdom of feature paint accessories—brushes, glass cutters, grainers, etc. "I almost double my pro-

A strong display in the store of G. W. Ecclestone, Bracebridge—This window has salesmaking force to a marked degree.

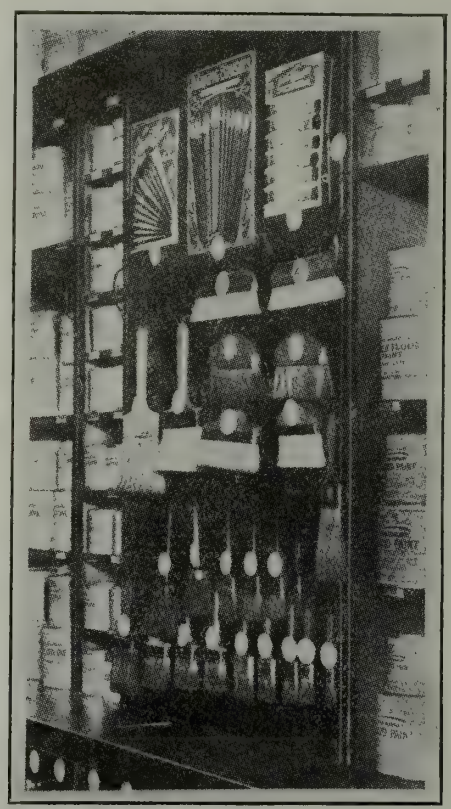
fit on paints by looking after the sale of such lines," was the statement recently made by a live dealer who has made a study of paint salesmanship. He explained that, before he had come to realize the importance of this branch, he had sold one brush for every four paint sales. Sometimes people came back and bought brushes after they had bought paint, and this set him thinking. The direct result of his cogitations was that he imposed a rule upon the members of the staff from which they were never to deviate. "When you sell customers paint, ask if they need a brush." He had come to the conclusion that people did not buy brushes purely and simply because they did not think of them. The average person knows about as much about keeping a brush as a Zulu does about drawing room etiquette. After finishing a job, they put the brush away on a dusty shelf without thinking to clean it. When the time comes to use it again, it is about as usable as if it had been carved out of granite. Therefore, the average person needs a new brush for practically every painting job they undertake.

The dealer in question found this out shortly after he put his new rule into force. He sold a brush with almost every tin of paint.

Displaying Brushes.

A common fault is that no effort is made to put brushes where they will be seen. A drawer or a box under the counter suffices in too many cases. The best arrangement is to give a space between the paint shelves to showing brushes of all sizes and descriptions, the method being shown in the accompanying illustration. Many dealers have adopted this plan and have found that it pays them. It brings a surprising number of enquiries and volunteer orders.

Window Displays.



Another important phase of paint publicity is the arrangement of paint windows. Right here let it be said that the trade has made marked strides in this respect during the past few years. There have been more paint windows in hardware stores this spring than ever before. Some of them have been mighty good ones too. The writer has inspected a few dozen displays which were atractive to the last degree, and had selling force aplenty. But the improvement is not yet complete. There is still a lot of room for betterment in this respect.

Paint window displays are necessary in the spring, but they **are necessary the whole year around as well.** Just because sales are not heavy in the wintertime, it does not follow that the dealer should completely relinquish his publicity measures. He should bear in mind that the spring will bring a big demand and that if he "keeps everlastingly at" his educational work (window displays are educational) he will make the demand bigger than ever when it does come.

The best results cannot be obtained from window displays, if they are conducted on an intermittent basis. Continuity is what counts. Keep pounding away and big business will result.

A Good Display.

It will not be necessary to enter upon a long dissertation as to what constitutes good window displays. There are so many ways of making an effective window that no rule can be laid down. Suf-

How brushes can be stocked and displayed to bring best results.

fice it to say that the display in the store of Geo. W. Ecclestone, Bracebridge, which is reproduced on the preceding page, is in every respect a great business-getter. One point is well worth noting in connection with this window trim.

In the centre a chair is shown which has been finished and consequently presents a flawlessly new appearance. A practical touch of that description adds 100 per cent. to the selling power of the display. It puts before the public a test, a proof, of the results which can be obtained. A person can be convinced more readily in that way than by any other means.

Talking Paint.

There is still another phase of paint publicity which should not be passed over. Ever consider the advantages gained by "talking paint?" All men have occasion to visit the hardware store more or less frequently, and if the dealer takes advantage of his opportunity to instil into their minds a little paint wisdom, he is bound to sell a large amount. "Haven't time," is the protest that many a dealer will voice. It will pay to make time. If a two-minute talk brings a two-dollar sale, the two minutes have been well invested. Of course, not every two-minute talk will bring a sale. A large enough percentage will, however, to make it worth the effort.

Equally important with the giving of adequate publicity, is the necessity for the retail salesman to know his goods. The chief reason why many dealers neglect to feature paint is because they do not know much about it. They are no better off than the public in that they do not appreciate the importance of paint.

To make his department live and profitable, the hardwareman must have a pretty good grounding in all that pertains to the value and the use of paint. Only through his knowledge can he gain the enthusiasm needed to push sales. Lasting enthusiasm cannot be secured without knowledge.

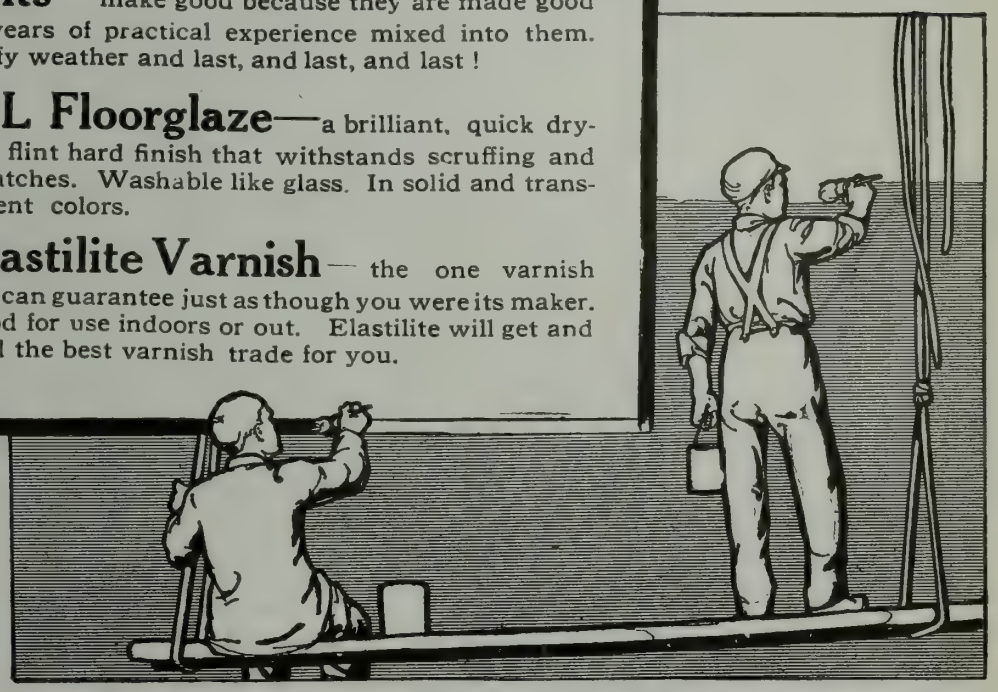
Knowing the paint he is selling, how and when it should be applied, and all points pertaining to its use, is the biggest asset that the salesman can have. It not only helps to make the sale; it makes a customer. The customer will come back.

The average man is not very strongly versed in the use and application of paint and varnish. He would probably be content to use carriage paint on the floors of his house. The chief trouble is that he has confidence instead of knowledge, and will go ahead with any job without pausing to reflect if he really knows how to do it right. If the man who sold him the paint has not gone to the pains of instructing him in the proper way to use it, the chances are that the job will be botched.

Truly "there is no business detriment like the wagging tongue of a dissatisfied customer." Once a customer has used paint with bad results, he starts to "rap" the paint and the dealer on every occasion. "Poor stuff," he asserts. "I tried it myself, and couldn't do anything with it." It never occurs to him that he did not apply it right. Hearers may or may not draw that conclusion. Some will not.

The salesman who does not see that his customers understand how to use the paint they have bought is not a success by any means. It will be readily seen, therefore, that a practical knowledge of the subject is an asset which retail salesmen need.

Wise Dealers Handle the ML Line Because They are Honest Goods That Build Trade.

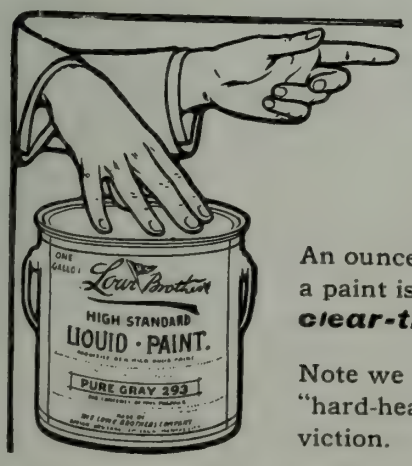


Our New ML DECORATIVE AID DEPT. Helps You to Get Trade.

ML Paints—make good because they are made good—there's 19 years of practical experience mixed into them. **ML Paints** defy weather and last, and last, and last !

GET OUR HELP
Our Decorative Aid Dept. answers your problems in house decoration and painting with free color suggestions, estimates, stencil designs, etc. Stencils sold. You get the right goods in the right shades for best effects in any house. Send for Booklet.

ML Floorglaze—a brilliant, quick drying, flint hard finish that withstands scruffing and scratches. Washable like glass. In solid and transparent colors.



Elastilite Varnish— the one varnish you can guarantee just as though you were its maker. Good for use indoors or out. Elastilite will get and hold the best varnish trade for you.

"Facts, and the proof thereof, are what business men demand."

—HARRIMAN

An ounce of fact is worth a pound of argument. The mere assertion that a paint is the best paint on the market does not influence in the least the ***clear-thinking*** business man.

Note we use the words "clear-thinking," not the words commonly used "hard-headed." A clear-thinking business man is always open to conviction. He runs abreast of the times.

If Lowe Brothers "High Standard" Liquid Paint is superior to any paint on the market, it does not take this type of man long to find it out. We are convincing "clear thinkers" every day—not by assertion, but by tests that are undisputable. Think it over, then write.

Weekly Market Report --- Paints

RECORD BUSINESS DONE.

The paint trade is going to break all records this year. There can be no doubt of that. All manufacturers find their output is away in advance of last year, and some difficulty is being experienced, in fact, in meeting the demand.

Firmness is noted in all lines, but the only price change is in linseed oil, which has gone up 2 cents. Putty will be advanced soon, and there is already some talk of another advance in white lead.

There is not a superabundance of stock in any line. Linseed oil is particularly scarce at the present time.

MONTREAL.

Montreal, May 16.—It is not often that a manufacturer will complain of the large amount of business he is doing, but business is rushing at the different factories to such an extent that these people hardly know which way to turn. One manufacturer described conditions as a "holy fright." Many of the factories are working twenty-four hours a day, but even this double shift does not seem to quite enable them to keep pace with the enormous number of orders which are coming in. From present indications it would seem that the sales of paint in 1912 will exceed those of any other year by a large margin. The markets are steady, and no change in prices has been noted from those of last week, with the exception of linseed oil, which has advanced one cent.

Linseed Oil Scarce.

The scarcity of linseed oil is quite a feature of the markets these days. The stock of seed at the different mills has become very low, and navigation only having opened a few days since, no boats laden with seed have yet arrived. The shortage was so marked that it was rumored that one mill had been forced to close down altogether, owing to their supply of seed being completely exhausted. Conditions will change, however, in a few days, and this temporary shortage is not expected to affect the market to a great extent. The price has been advanced one cent since last week, and is now quoted at 97 for raw and 99 for boiled.

Turpentine. — The demand for "turps" continues strong, and buying is good without speculation. Supplies appear to be in fair shape, and quotations remain the same at 70c for single barrels.

White Lead.—The advance which was made last week in this commodity has been maintained, and indeed it is thought by some that it will be followed by another advance at no very far distant date. The price of pig lead is high, and likely to continue so as far as can be seen, and it is only natural that the price of white lead must follow in its steps.

Mixed Paints.—The shipping departments are all going at full pressure in the endeavor to keep pace with the influx of orders for mixed paints. It was expected that this would prove to be a good year for the sale of these goods and manufacturers were prepared with large stocks. It now looks as if all expectations would be realized, and in fact, the business done will probably exceed the hopes of even the most sanguine.

Putty.—There has been a good call for putty, and very few assorted orders are without this article. Some heavy consignments have been sent down by the water routes. Price remains the same.

TORONTO.

Toronto, May 16.—The outstanding feature in connection with the paint and oil market is the remarkable proportions to which the demand has attained. Business is much brisker than ever before. One manufacturer stated to a representative of Hardware and Metal this week that during the past six months he had increased his business 37½ per cent. The local branch of another firms has more than doubled the volume of business since the first of the year. Reports from other concerns are pretty much to the same effect.

The natural result is that stocks are not heavy in any line. The increase in the demand all around keeps the jobbers and manufacturers hustling to find sufficient supplies. The second natural result is that prices are showing a tendency toward extreme firmness. In only one line—linseed oil—has an advance been declared, but increases are believed to be pending in other lines.

The transportation question is a serious one at the present time. It is found difficult to secure supplies and to make shipments. "We see little hope of improvement," said one jobber. "Now that the boats are running the accumulation will be cleared out gradually, but it will take such a long time to effect this, that we can see little hope for improvement for some time."

Oil Higher and Scarce.

Linseed Oil.—The price has been advanced 2 cents, making the prevailing quotations $1.00 for raw and $1.03 for boiled. The advance has been due largely to the shortage which prevails in oil. The inability to secure sufficient supplies just now is caused by the freight congestion more than anything else.

There is a first class demand for linseed oil, so that, under all circumstances, it is believed to be assured that the price will remain firm for some time.

Turpentine.—The price of turpentine remains at 70 cents. There has been a slightly easier tone at Savannah, the price having fallen off a cent, but as the Savannah quotation was much higher in proportion than the local figure, the decrease there has not had any effect on Toronto prices. It could recede still further without giving the local jobbers the margin generally deemed necessary. There is a good demand locally for turpentine, and stocks not heavy by any means.

White Lead.—The price generally quoted is $7.15, in accordance with the increase put into effect last week. The commodity is unusually firm at that figure, and already some talk is heard of another increase. "It will surely come," said one jobber to-day. "I don't suppose that it will be for some little time, but you can put it down as certain that the price will not remain where it is." White lead is now extremely high, but the circumstances are exceptional, and the price asked is not as high as would be warranted by the advanced price of the raw material.

Demand for white lead is good, and many large orders are being placed.

Glass.—The situation in glass presents no features. Business is not yet brisk, but from the orders placed, it is apparent that firmness is dominating the price situation.

Putty May Advance.

Putty.—No change has been made in the price of putty, but it seems reasonably assured that something will be done. The largely advanced cost of white lead, oil and whiting has made it obligatory to advance putty prices and a revision of the schedule may be expected before very long. Present prices are:—Standard bulk in casks, $2.20; in 100-lb. drums, $2.40; in 25-lb. drums, $2.50; bladder, in barrels, $2.65. Pure putty prices are as follows:—Bulk, in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder, in barrels, $3.

Victoriaville. Que., Parish Church — L Caron & Son, Decorators

The beautiful white interior of the Victoriaville church was obtained with

Brandram's B.B. Genuine White Lead

Brandram's White Lead, made by the Brandram's process for practically two centuries, is the standard White Lead of the world. Specified by architects, used by leading decorators, Brandram's Lead helps you control the big paint trade of your territory.

Before placing your order for White Lead, write for prices and full particulars to the only corroders and grinders of White Lead in Canada.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

WHAT about the most profitable department in your store — your paint department?

Is it giving the splendid returns that are only possible from a clean-cut quality stock?

Minerva Paints and Paint Specialties

are a line of exceptional merit.

They are the famous British Paints of 78 years' reputation for quality, and are backed by vigorous dealer co-operation on the part of the manufacturers.

Made in Canada with the same care and skill which has formed the basis of their unique reputation.

Full Imperial Measure in every can.

It will pay you to investigate the Minerva proposition.

Ask any Minerva Agent.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

377 Carlaw Ave., Toronto Established in England in 1834

L 23

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and be ready for spring. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO

66-68 FRASER AVENUE

For Twenty-seven Years Manufacturers of Self-measuring Pumps, Tanks, Gasoline and Oil Storage Systems, Self-registering Pipe Line Measures, Dry Cleaning Systems, etc.

Do you know any of these Bowser users?

Clinch the Roofing Contract

You positively cannot say too much for BRANTFORD ROOFING. The cut shows the George White & Sons Co.'s plant situated right beside the G.T. main line in London, Ontario. Even the Boiler House and Foundries are covered with

BRANTFORD ROOFING

and **a roofing that successfully withstands the combined action of fierce heat within** and **flying sparks** and **hot cinders**, flung from passing trains, without—besides defying wear and weather—**cannot be too highly recommended.**

N.B.—When you see excavation work going on go after the Roofing Contract and clinch it. BRANTFORD ROOFING will enhance your reputation, and there is a reasonable margin of profit in it for you. Write for our new catalogue.

Display of Elephant Paint and White Lead in Store of J. C. McFadden, Toronto

Paints that have made good for nearly fifty years are safe paints for you to handle

Half a century's success is back of the name and quality of every can of Canada Paint Co.'s Paints and Varnishes. They are distinctly a Canadian product made by Canadians for Canadians, and they have won the confidence of all who have used them. They are medium priced, and therefore appeal to the largest class of desirable buyers—those who want good quality at a reasonable cost.

The Canada Paint Products include a complete line of Paints, Varnishes, Colors, Enamels, Stains, White Lead and Sundries which enables us to fill all orders promptly and satisfactorily from any of our three factories in Montreal, Toronto and Winnipeg.

Tie up your store to the sales and profit-making reputation of the old reliable Canada Paint Line by early and attractive window displays. Make the most of this good name and see how it helps your business this spring.

The Discount Discounts The Terms

Glidden

Discounts

Don't be deceived by the salesman who talks terms instead of discounts.

Ask yourself this question:

Isn't the argument that some salesmen make of long terms after all a cheap argument?

Remember, eventually you pay the bill.

N. B.

Never turn a Glidden salesman away. He talks Discounts—and Discounts make profits.

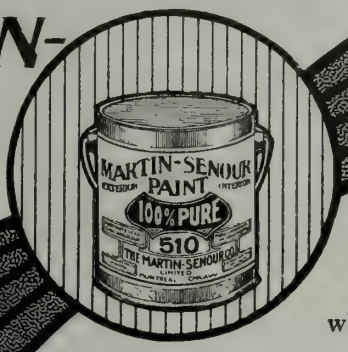
UNDOUBTEDLY you can get longer terms from other varnish houses, but you can't get as good a discount, and *the discount discounts the terms.*

Read that sentence again and think it over.

If profits are what you are looking for, you must get the discount or you are cheating yourself. Could any terms you ever heard of —two months, three months, six months, or seven years induce you to cheat yourself?

That Glidden discounts are the best, *you* can demonstrate. That Glidden Green Label Varnishes, Endurance Wood Stains and Endurance Colorspar are the best, *we* can demonstrate.

That Green Label Varnishes, Stains and Specialties are most profitable to you, your customers will demonstrate.



Let us send you full particulars of our unequaled proposition to the trade.

GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure

finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

A WORD IN TIME

Are you prepared to meet the demand for MARINE VARNISH which is bound to be shown during the coming weeks?

Have you a complete stock of GOOD VARNISH which you are sure will give satisfaction to your customers?

Or, in other words, have you a sufficient quantity of DOUGALL VARNISH on your shelves?

DOUGALL VARNISH will not blister with the sun.
DOUGALL VARNISH will not crack or peel off.
DOUGALL VARNISH is not affected by wind or spray.
DOUGALL VARNISH is the varnish that lasts longest.

See that your customers get satisfaction. See that they get the best varnish on the market. See that they get DOUGALL VARNISH.

Gloekler's Patent Refrigerator Door Fasteners

Forcing Door Open

Showing Door Forced Shut

THIS fastener has been the standard for Refrigerator Doors and cold storage work ever since it has been on the market, and, especially for heavy work, is without an equal. It is made heavy and substantial with nothing about it to break or wear out, and will "last a lifetime." Simple and easy to operate. In closing door, turn lever inside keeper and press down on handle, which seals the door absolutely tight with little effort. To open door, turn handle around until lever comes outside of keeper and lift on handle, which will force the door open without any effort, no matter how tightly jammed.

We also make a line of Spring Fasteners, Hinges, etc., in tinned, brass and nickel plated. Write for illustrated price list.

NOW Is The Time

that every progressive dealer should stock refrigerators. But when doing so he has to select a trade-winner that produces a reliable profit.

You cannot get better results than those produced by the

"BARNET" Refrigerator

Contains Many Good Selling Points

This is a refrigerator that has strictly up-to-date features — a refrigerator that has been endorsed by experts. It has been subjected to every practical test, and we know that it is the choice of those who want the best.

Other dealers are reaping splendid profits—why don't you? Investigate at once.

Write us to-day for catalogue. Study it. Then you will realize **"BARNET" superiority.**

The Barnet Manufacturing Co.
LIMITED

Renfrew, Ont.

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

EXTERMINATE THE HOUSE-FLY!

The fly, scientific investigation proves, is a most active medium for the distribution of contagious diseases. It breeds in filth, feeds on it, and scatters its cargo of germs wherever it goes.

It also breeds at an astonishing rate. Within three months, under ideal conditions. the progeny of a single pair of flies is estimated at over twenty-five millions. The killing of one fly, therefore, exterminates not only that fly, but millions of possible descendants as well.

The "CANADA" Fly Killer.
Kills without crushing. Japanned wire cloth surface, Edges bound with soft velvet corduroy. Will not scratch nor soil the most delicate surface. Will not break glass. Packed 1 dozen in a box, 1 gross in a case.

The "BALLOON" Fly Trap.
Much preferable to sticky fly papers or poison pads. Its capacity is unlimited. Can be emptied in a few seconds by drowning the flies. Packed 1 doz., nested in a case.

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.

The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

LAMPBLACK

HIGHEST QUALITY

We are the World's Largest Manufacturers of Pure Lampblacks. This has been gained by giving our trade intrinsic value for money received—a value that cannot be obtained in any other lampblack.

If in doubt, let us submit you the evidence of dealers who know, by sending you copies of their repeat orders.

Better give our Lampblack a trial—it will cost you nothing if dissatisfied.

Write to-day.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

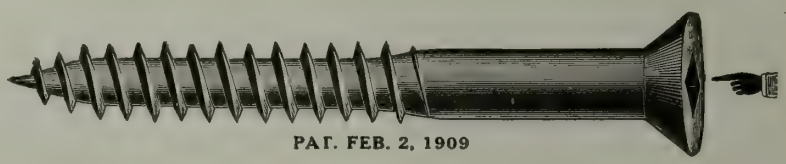
Raise The Percentage of Your Sales

You can sell any sportsman who needs a good rifle a "Ross .280" (High Velocity) more readily than some cheaper and perhaps more or less well known make. Moreover every such sale means a satisfied customer, and a very nice profit for you.

It's worth your while to think over the "Ross High Velocity" proposition.



ROSS RIFLE CO. - QUEBEC

ROBERTSON SOCKET HEAD WOOD SCREWS

The hardwareman who is wide awake can make excellent profits by boosting this new wood screw.

The square hole, into which a specially made screwdriver fits, has become extremely popular with every user. With this the woodworker can do the work in less time and without danger of destroying the wood, as the screwdriver cannot slip.

We are also manufacturers of Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails, Wire, etc.

Drive Home This GILLETTE Selling Point "The Gillette is the Only Adjustable Razor"

We are emphasizing this GILLETTE feature in our newspaper advertisements, using this same illustration.

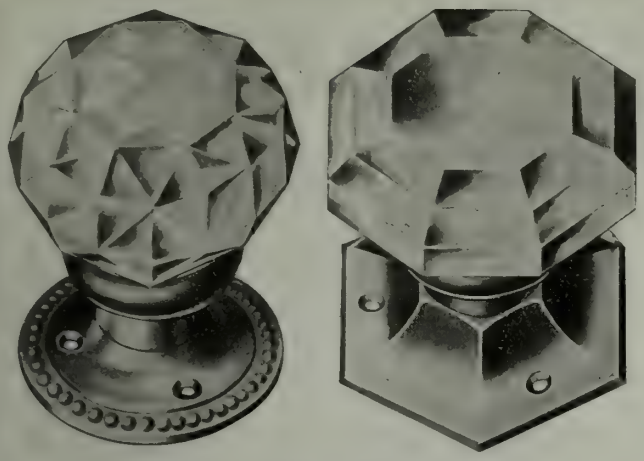
But there may be some of your customers who will not read our newspaper advertisements carefully, and will fail to realize what an advantage it is to own and use an adjustable GILLETTE.

It's up to you to show them—and it is important that you should do so, for this is **one of the strongest of the GILLETTE'S many selling points.**

The illustration shows the GILLETTE in two somewhat extreme positions. In the lower cut the handle is screwed up tight, so that the cap forces the blade-edges down close against the guard. This gives, of course, a very light shave, and is comfortable for the tenderest skin.

In the upper cut the handle has been loosened about one-quarter turn. The edges of the blade, following the cap, have sprung away from the guard. In this position the blade takes more hold, and cuts very close, no matter how tough or wiry the beard may be.

But, as we said before, this is rather an extreme position, and the average man gets the most satisfactory shave when he first screws the handle up tight and then loosens it about an eighth of a turn.



But once you make the principle clear and show him the advantage of the adjustability which only the GILLETTE possesses, your customer will not be long in finding out just what adjustment best suits his beard and face. **Thus he will get the utmost comfort and satisfaction out of his GILLETTE, and he'll not forget that you sold him the razor and "put him wise."**

Incidentally, he'll come back pretty regularly for new blades—and as many other things as your good salesmanship suggests.

CHICAGO SPRING BUTTS

A SUGGESTION

Have you a stock of Spring Hinges that have distinctive selling features which your salesman can offer and which would make the prospective purchaser buy them and no other?

Chicago "Triplex" Spring Butts

offer this advantage to you. The appearance, durability and finish of this article are unsurpassed, and in consideration of prices that are conservative in respect to value, the up-to-date dealer cannot afford to neglect this profitable business.

Send for Catalogue M 26. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

CONNOR BALL BEARING WASHER

is a profit earner

It pays big dividends to dealers who take an active interest in it. Many wide-awake merchants have doubled their washing machine sales since taking hold of the Connor Ball Bearing Washer. The many

exclusive features make it easy to sell

as they attract unusual attention, and create a strong desire for the washer. Just what these features are will be fully explained to you when we receive your name and address. Drop us a card. Send for a copy of our new catalogue, now ready.

Long Distance Phone No. 87

Sold throughout the Dominion by all Wholesale and Retail Hardware Merchants.

The cut shows the George White & Sons Co.'s plant, London, Ontario. Note well the location. The plant stretches out along the G. T. railway track—it lies right in the very danger zone of flying sparks and hot cinders. But that doesn't worry the Company in the least, for every building connected with the plant is covered with Brantford Roofing—and "Flying Sparks" are no menace to a roof protected with Brantford Roofing.

Get our BIG Profit-Earning Proposition

Now is YOUR time to get ready for a good roofing trade, and ***quicker sales*** and ***bigger profits*** can be realized by handling Brantford Roofing than would be possible with any other line. For Brantford Roofing is the ONE best roofing on the market. Made of long fibred wool completely saturated with pure Asphalt (a ***mineral fluid*** that cannot be materially affected by heat or water, wear or weather) in three different kinds—ASPHALT, RUBBER and CRYSTAL.

We have a big profit-earning proposition which is sure to interest you. Don't overlook it. Write to-day for full particulars—find out the reason why there's profit for the merchant handling

LEAP-FROG

171-A Secret Process VANADIUM Steel
(Also Straight Back)

Extract from The LONDON DAILY TELEGRAPH
WHICH SPEAKS FOR ITSELF

As a matter of fact, the trade of which Sheffield is the centre has in the last year or two fought—and won—a notable fight. Germany was a formidable competitor; America a yet more serious one, in the matter of tools, and especially SAWS. The English makers set themselves to meet this sharp rivalry, availing themselves of a superior position alike in materials and highly specialized skill. They took full advantage of the technical schools, with their scientific teaching as to metals and the treatment of steel, and paid more attention than they have ever done before to design and finish. Their energy and enterprise won prompt recognition from the buyers for the retail trade, and within very recent days they have enjoyed the spectacle of seeing the agent of one of the most noted firms of tool-makers in the United States coming over to make a tour of inquiry as to what had come over English trade that they had lost it so entirely. The British manufacturers had, moreover, proved conclusively that, quality for quality, their products had nothing whatever to fear on the important matter of retail selling price, and their victory was complete.

IF you are not handling our Saws and Edge Tools, you are paying more for inferior goods. Does it pay you ?

BULL RINGS

Perhaps you have not thought of Magnolia Metal in connection with Bull Rings—it seems to be just the thing. It is also good for piston and stem rod packing.

MOBILE LIGHT AND RAILROAD COMPANY.

Mobile, Ala., January 12th, 1912.

Gentlemen,—In answer to your inquiry of January 2nd, will state that the Magnolia Metal put in our Bull Rings two years ago is giving perfect satisfaction. The metal has worn about 1/32 in. on the bottom in that time. The ring is 58 in. in diameter and 11 in. of bearing surface. Two days were used in the job of removing the ring, preparing it for filling and turning it in a lathe to fit cylinder after it was poured. If the above is of any use to you, you may use it any way you like,

Respectfully,

C. MANKER,

Engineer Power Station.

The method employed in applying Magnolia as described by Mr. Manker will be sent to anyone desiring the information.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

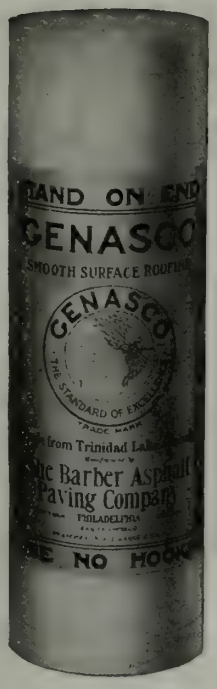
H&R ARMS CO

¶ Right in every hardware store is the most logical place for a line of reliable, accurate, and moderate-priced single guns.

For ridding premises of pests—snakes, rats, chucks and the many kinds of crop and poultry destroyers, the Harrington & Richardson single guns are specially suited.

¶ There is a large and growing demand for an economical and efficient weapon for just that purpose, as well as for occasional hunting.

Here's the gun:



Specifications, 12 to 28 gauge—26 to 32 inch barrel—ejecting or non-ejecting—fine black walnut stock—hard rubber butt plate—weight 5¾ to 6⅛ lbs., according to gauge and barrel. For black or smokeless powder.

¶ These guns are quick sellers. They are made and sold under the broad H. & R. guarantee of quality, reliability and satisfaction. With a few of these H. & R. guns in stock, the hardware dealer is equipped for a profitable and increasing trade.

Our 40-page catalogue is yours for the asking. It contains valuable selling points for every hardware dealer, and shows the complete H. & R. line. Ask for it now while you think of it.

Harrington & Richardson Arms Co., 715 Park Avenue, Worcester, Mass.

What is the cost by the year?

That's the way to value roofing. And your customers will find out sooner or later that roofing that costs less by the year is the only kind to buy.

Genasco

THE TRINIDAD-LAKE-ASPHALT Ready Roofing

costs about the same as ordinary roofing in the beginning, but the enduring life that Trinidad Lake asphalt gives it, makes it last and cost far less by the year.

Explain that to your customers.

Order Genasco from your jobber and be fully prepared to supply them.

The Kant-leak Kleet for smooth-surface roofings is the latest and greatest method of applying.

Corrugated Iron Prevented Spread of Terrible Fire

The thousands who watched the terrible fire in Toronto a few days ago, when thousands of dollars' worth of property was destroyed, had a chance to see what corrugated iron would do to prevent the spread of flames.

In "The News" the next day it was reported that the firemen could not reach the flames on account of the iron coverings of the buildings, but as an official put it afterwards: "I tell you if it hadn't been for the iron coverings on those buildings this entire neighborhood would have been destroyed. Some of those buildings were huge furnaces and the last thing to fall was the metal sides."

And that is only one instance of the protection afforded by Corrugated Iron.

How about your buildings? Supposing some building near yours should burn, and the burning pieces fell on your factory, how many chances have you of saving it?

Use corrugated iron for your covering. Let us tell you about ACORN QUALITY CORRUGATED IRON—the iron with the trade mark—the kind that lasts practically forever.

If you intend building, write to us to-day for our prices.

Stalls and Stanchions

Barn Door Hangers

Haying Tools

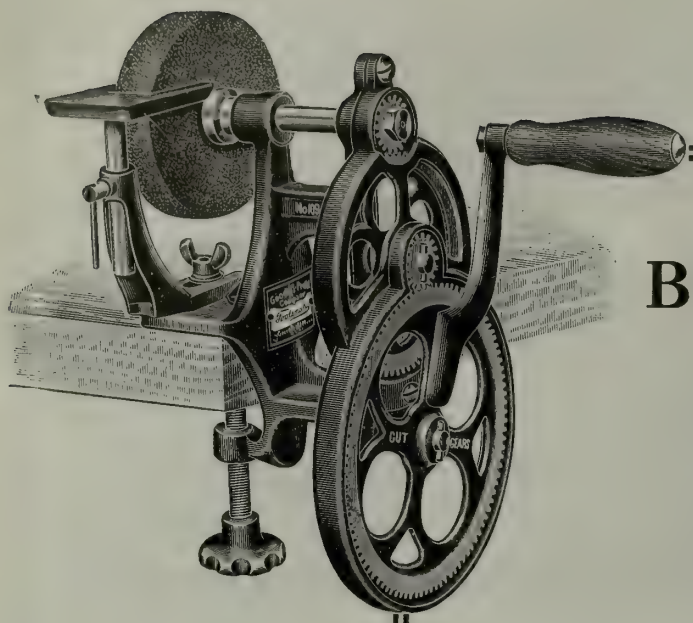
Tank Heaters

The Biggest People In The Business

OVER a quarter of a century ago this company began the manufacture of practical labor-saving devices for farmers' use. Star Haying Tools were our first product—a line well and favorably known wherever haying tools are sold. Next came our line of Wire Stretchers, followed shortly after by our lines of Tank Heaters and Door Hangers. A few years ago we began the manufacture of Star Barn Equipment, including a complete line of Litter and Feed Carriers, Stalls and Stanchions, with the result that our lead as Pioneers in this field is not to be overcome by anybody. Our competitors have been left far behind—both as to quality and quantity of output, and to-day

STAR Barn Equipment, Haying Tools, Wire Stretchers, Door Hangers, Etc., Etc.

are the STANDARD in their respective lines. But we're not resting on our oars. The policy of this company to-day is *more aggressive than ever*—the quality of output is watched just as closely.



And that's why the Hunt, Helm, Ferris & Company dealer proposition has steadily been a winner. If you are interested in bigger, surer, steadier, better paying business, get in touch with us—*at once*. Our proposition will interest you because the demand has been created before you ever put the goods on display. A postal card will bring full details. SEND IT NOW.

Quality in Cutlery

In No Other Line of Goods is Quality so Hard to Detect Without an Actual Test As in Cutlery

Boker's "Tree Brand" Has Stood the Test

You could obtain inferior cutlery which would, to all outward appearances, resemble "Tree" Brand and you could sell these inferior goods at fully one-third the prices asked for "Tree" Brand, but for actual use and practical value would not in any way resemble the "Tree" Brand line. The quality in cutlery is hidden to the average purchaser, as the value and cost lie in the material, tempering and grinding more than in the style and finish. Insist on having Boker's "Tree" Brand Cutlery if you wish to work up a profitable and a high-class cutlery trade.

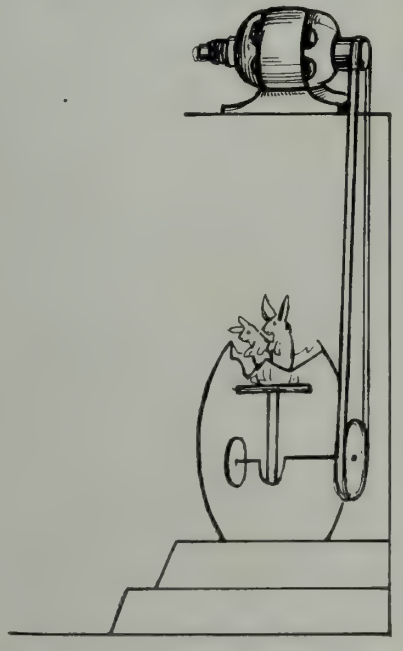
Making Window Displays Stand Out

A Display in store of A. Latham, Moose Jaw, which " Stood Out."

Originality is the Quality Most Needed to Attract General Attention to a Window—How Motion Device was Arranged in Window of Latham, Moose Jaw—Spring Millinery Opening Conducted by J. O. Cadham of Portage La Prairie —Displays Must Have Selling Force.

If there is any short-cut to success, there can be no doubt that the sign board pointing the way, bears the word "Originality."



The man who can find something new and a little better than what had previously been known in any line, commands immediately the world's attention. Originality is the quality which goes largely into the making of authors, poets, artists, inventors, explorers, financiers; the men, in fact, who "stand out" from their fellows.

The window dresser who is most successful is the man who can make his efforts "stand out," who can put the indelible stamp of originality on his displays which will compel attention. The main retail street of a live town or city is lined with store fronts all more or less attractive and all presenting displays possessing a certain degree of merit. The pedestrian cannot give his attention to all of them. Life is too strenuous nowadays to allow of a careful scrutiny of all store windows. The public lends its attention, therefore, to the displays which "stand out" from the rest.

Original effects are eagerly sought by window trimmers. It has often appealed to the writer that the hardwareman has a most exceptional opportunity. The stock at his command is wide and varied, including everything from a brass tack to a coal range; practically everything, in fact, which is neither eatable nor wearable. He has articles of every size, shape and constituency. The facility with which the necessary parts can be secured to make up imitations of spring bonnets, trains, automobiles and airships is an index to the possibilities of hardware window dressing. An Ontario dealer once constructed a pipe organ out of articles in his store and it did not stretch his ingenuity to find the necessary parts.

Store Up Material.

No man is so prolific of ideas that he can find a brand new scheme for every window display that he arranges. Still, original effects can be obtained by adopting and improving the ideas of others. The best, and most original, window trimmers are those who keep closely in touch with the work of others engaged in the same line. Another man's idea may suggest something altogether different to you. The really capable man is always open to suggestions.

352

Showing How the Mechanism in Window Display Worked.

Keep a Scrap Book.

It is wise, therefore, to keep a close watch on your trade paper. It is one of the functions of a trade paper to supply its readers with ideas and suggestions on window dressing. Readers of Hardware and Metal are given the benefit of the efforts of best window dressers in all parts of the country. Keep a scrap book, clip out all cuts of window displays and paste them in. Likewise clip out all reading matter relating to this important subject. If properly divided and classified, this information will be available at any time and it will be possible to secure ideas for any kind of window. For instance, this paper has published at least twenty photos of paint displays since the first of the year. If each one had been carefully clipped out, the possessor would now have a wealth of material to assist him in designing windows of his own.

Start this scrap book now.

Original Ideas.

"How can I make a window display stand out?" was the question recently asked by an ambitious hardware clerk.

There are innumerable ways. An original color scheme will frequently be sufficient to arrest the attention of passersby. A display on which particular efforts have been lavished in the matter of detail and effect will always succeed. A sure way is to have a motion device of some kind.

An Easter Display.

This plan was followed with great success in the store of A. Latham, Moose Jaw. An illustration of the display in

question is shown at the head of this article.

L. A. Phaneuf, who designed the window, showed considerable mechanical skill in the arrangement of the details. He first constructed a background of orange sateen material, suspending the frame from the ceiling. In front of the background at a distance of about 5 inches lattice work, made out of green crepe paper, was placed. Two steps were placed on the floor of the window and on top a huge egg was shown. It was made out of puffed cheese cloth, with a sufficiently large opening at the top to allow a nest of rabbits to be mechanically raised and lowered.

How it Worked.

The plan on the opposite page shows how the mechanism worked. An electric motor was placed on top of the window. The belt, connecting it with the wheel at the back of the egg was hidden from view by an "Easter Greetings" sign, shown in the photograph.

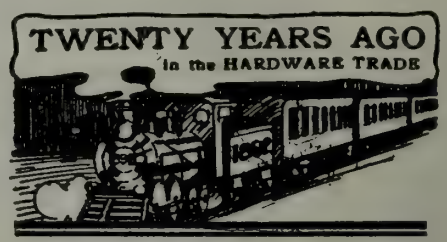
What was Revealed in the Window of J. O. Cadham when the Blinds were Drawn Back on the Morning of the Millinery Opening Day.

The window was a marked success and crowds watched it from early morning until late at night.

Held Millinery Opening.

A distinctly original idea, of a somewhat different order, was that adopted by J. O. Cadham, of Portage la Prairie, whose display of hardware millinery is shown herewith. "But," someone may object, "trimming up hardware bonnets is not original. It has been done for years." True, but not just the way that J. O. Cadham did it. Mr. Cadham held a regular millinery opening. He found the date of the regular spring opening of the milliners in town and started to advertise his own for the same time. It was done with all seriousness. People rubbed their eyes when they read his advertisements. Millinery in a hardware store! Were things in this old world becoming so topsy-turvey that the hardwareman, dispenser of everything made of metal, was actually dealing in the silks and fripperies which enter into the milliners' work?

On the morning when the regular millinery openings occurred, the blinds of the Cadham hardware store were drawn up, revealing a display of neat creations made up entirely of hardware and house-furnishing lines. The public caught on to the joke and enjoyed it to the fullest extent. The women did not leave Cadham's off the list of openings they attended. A majority of them probably did nothing else but laugh and walk away; but the general effect had been good. Mr. Cadham writes: "It caused considerable comment all over the city and was one of the best ads. our store has had for some time."



The window dressers should never lose sight of the fact that his windows should have "selling power."

An authority on window dressing makes the remark, "We will admit that a pretty girl dancing a jig in the window would attract everyone in sight. It would not cause any of them to come in and purchase as a direct result, however." It is well in designing a window which aims to attract general attention, to not neglect the selling end of the proposition. The display in the A. Latham hardware store is a good sample of a window which combines both objects. The motion device attracts attention in the first place. The bulk of the space is taken up, however, with a display of cut glass, chinaware, silverware, etc. After studying the moving nest, people would look over the rest of the window and, in a number of cases at least, become interested in the goods shown.

In the case of the millinery display, the window had a certain amount of selling force, inasmuch as nothing but hardware was used in trimming the hats. Saucepans, dusters and clothes pegs were very much in evidence.

One Way of Standing Out.

The surest way to make a window "stand out" is to give such attention to the subject that every display shown has merit. People will then come to realize that this particular store always has windows worth looking at. It will "stand out" permanently in the public mind and will be given regular attention. People will get the habit of looking at the store windows every time they pass.

The following items are taken from the issue of May 21,1892:

An interesting sketch is given of the J. B. MacLean Publishing Co., together with illustrations of the building, offices and officers. The publications put out were "Canadian Grocer, "Hardware and Metal," "Books and Notions" (now "Bookseller and Stationer"), "Dry Goods Review," and "Printer and Publisher."

Editor's Note.—The MacLean papers now number fourteen, including "Financial Post," "MacLean's Magazine," and "Farmer's Magazine," as well as the trade and technical papers.

TRADE NOTES.

"Dunsmore Bros., stove and hardware dealers, Stratford, have dissolved, J. J. Dunsmore continuing.

"Vanzant & Reesor, hardware dealers, Markham, Ont., have dissolved, Geo. F. Reesor continuing.

* * *

"The bull interest in the pig tin market still have matters their own way. There is no opposition apparently and no inclination to a contest. In the London market, prices have advanced to £97 15s. for prompt and £97 7s. 6d. for future delivery."

Editor's Note.—It is indeed interesting to note that at time of writing, the price of spot standard tin at London is £212 10s., futures at £207 10s. Is it necessary to add that the bulls are still in control?

* * *

"Linseed oil has been marked down another cent. Raw sells at 55c., and boiled at 58c. Turpentine is lower and weaker. The price is now quoted at 50 cents.

Editor's Note.—To-day the hardwareman pays $1 raw linseed oil and $1.03 for boiled, while turpentine is 70 cents at present—the lowest price in a long time. The last two decades has seen pretty steady advances in staple prices.

Turning the Stock---How Often?

Representative Hardwaremen Agree That the Stock in the Store Should be Turned at Least Four Times a Year — The Effect of Divergent Conditions — Larger Margin of Profit Should be Placed on Slow Turning Lines.

The question of the profit that a hardwareman should make depends very largely upon the number of times that he is able to turn his stock over in the course of a year. If one dealer marks his goods at a net profit of 8 per cent., but only turns his stock three times in the year he is not making as much money as the dealer who marks a 5 per cent. profit and turns the stock five times; supposing them, of course, to carry the same sized stock.

How many times should the hardware dealer turn his stock? This is a question of deep interest to the trade, on account of its important bearing on the problems of price marking and profit fixing. It is important that the dealer should know how often he is turning his stock over, for otherwise he cannot fix his margin of profit with the certainty required. Further, it is important that he should know how often other dealers are turning their stocks.

To secure accurate information on this point, Hardware and Metal has secured information from representative hardwaremen. Briefly summarized, the opinions secured give the following information:

The larger the stock carried the more difficult it is to turn it rapidly.

Dealers near source of supply should turn stock more rapidly than others farther away.

A general hardware stock should be turned at least four times a year.

Dealers who carry small stocks should have a turnover six times a year.

In dealing with a question of this kind, average conditions only can be taken into consideration. For instance, a hardwareman in business within a few blocks of a wholesale house could get along with a very low stock, because he could replenish his store without delays. A dealer in this position might turn his stock, say, twenty times in the course of a year.

The average dealer, however, does his ordering by mail or through travelers, and has to allow for a certain delay in getting shipments. He cannot afford to let his stocks get too low, therefore, and must carry many lines continually, which turn over slowly. In judging the question, conclusions must be based on these conditions.

A number of the replies received are appended:

A Table of Profits.

F. C. Lariviere, of Montreal, writes: "This very important question cannot be governed by any rule. A store situated near sources of supply can do a much larger business with a small stock than one situated far from jobbing centres. This will be readily understood, as delays in transportation are more frequent on a long distance than a short one. I will give you a table which shows the profits realized in turning over the stock.

"Let us suppose an investment in stock of $100, and the margin of net profit equalling a percentage of 20 per cent. on cost, after having provided for the cost of doing business. If turned over five times during ten years, that $100 would produce $148.83 of net profit; if ten times during ten years, $510.16; if twenty times during ten years, $3,733.60, and if turned over forty times during ten years—or every three months—$146,870.74. You at once see the productive difference of each different operation. Consequently, it should be the aim of every merchant to try and keep a stock as low as possible, so as to increase the percentage of his turnover. You must also remember that it is far easier to increase a percentage of turnover in a small business than in a large business. The more the business grows, the larger the stock you must have, and this often includes a large number of lines which are slow sellers.

"I know of a firm, very close to source of supply, who with a stock of $3,500, made a turnover of $40,000, or very nearly eleven and a half times the stock on hand. Three years after they had a stock of $19,300, and made a turnover of $110,000, or 5.69 times. Seven years later the stock had increased to $67,000, and the turnover to $270,000, or a little over four times. Since then, it is a hard proposition to keep the stock and turnover between three and a half and four times, although the volume has long passed the $500,000 mark. In consequence, would state that I believe a firm doing a large business who can turn over four times the amount of stock carried is doing fairly well. It should be the aim of smaller businesses to turn over their stock from five to seven times to have more profitable returns on investments."

Turn Four Times.

Magladery Bros., of New Liskeard, write:

"We would say that the number of times a stock should be turned depends entirely on the amount of profit you are making. For instance, on heavy goods, which carry a small portion of profit, we expect to turn six times a year; but, on the other hand, if we turn our shelf goods three times in the year, we are well satisfied. However, we suppose the question is, if a man is carrying, say, $20,000 worth of stock how much should his total sales be? In answer, we would say that, if it is a general hardware stock with the average expense, the total sales should be not less than $80,000."

A good point is raised here. On lines which turn over slowly, the hardwareman should expect a larger profit than he gets on quick moving goods, because his money is tied up longer. If a dealer is turning any particular line of goods very rapidly, he can afford to fix his percentage of profit at a smaller figure than he expects on other lines.

Where Profit Lies.

D. Cinnamon, of Lindsay, writes:

"The hardwareman should not lose sight of the fact that upon his profits depends the success of his business. It is not the dealer who carries the biggest stock or does the biggest business who always makes the most money.

"We think the average merchant should turn his stock over at least from three to four times a year, and as much oftener as possible."

Other letters bearing on this question have been received, and will be published later. They all bear tribute to the fact that rapid moving of stock is highly desirable and that the dealer who is not averaging a turnover of four times in the course of a year is not getting as good a return as he should on the money he has invested.

PUBLISHED EVERY SATURDAY.

MADE IN CANADA.

The sending of the Made-in-Canada train through the West is an interesting development of the desire evinced by Canadian manufacturers to convince the public that the products of home industry cover every field, and are as good as can be obtained anywhere. The train will tour as far west as the Rockies, making one hundred stops in all. Each of the ten coaches is filled with a well arranged assortment of goods of strictly Canadian manufacture, ranging all the way from fancy food stuffs to powerful engines. Thus the people of the hundred most important points in the West will have an opportunity to review the finished efforts of home manufacturers and to gain a realization of the rapid growth of industrial life in this country.

WITH REFERENCE TO ORDERING.

From stove manufacturers and large handlers comes a seemingly contradictory statement, namely, that the orders for coal oil stoves are exceedingly large, and that there is also evidence that a goodly number of dealers are holding back their orders—doing this, of course, with the intention of calling for immediate delivery when the coming of really warm weather brings out the large retail demand.

The position of the manufacturer is thus made rather difficult. He is busy now filling orders, yet he must prepare for a great rush later on—and even with all his preparations he knows that many who demand prompt delivery will have to wait.

The manufacturer, of course, would be delighted if the retailers would estimate exactly what they want, and would place practically their whole order at once. There are dealers who are doing this, and who are thereby avoiding all possibility of delays in shipment when delays in shipment mean losses in sales. But others feel they cannot order largely. They are not certain enough of the demand which they may expect.

It would seem though that even those who cannot estimate approximately what they will have opportunity to sell, may yet do much to avoid delivery troubles by going after the stove trade early. Proper advertising of coal oil stoves—proper demonstration, will bring these to the attention of probable buyers, and will bring early sales—early sales which, of course, will enable the early placing of supplementary orders, and the early shipping of these.

THE SLAVE OF THE COUNTER.

Man has been realizing of late years that it does not pay to overwork to such an extent as to hurt efficiency. The wisdom of the old adage that "all work and no play makes Jack a dull boy," is recognized.

It is an undisputed fact that the average merchant is the hardest worked man in this age of hard workers. If he does not belong to the comparatively small number, who have adopted the early closing plan, he works anywhere from twelve to fifteen hours a day. His labor is heavy and unremitting, requiring close attention and the exercise of all the faculties.

It may be that, in some localities, conditions are such that it is necessary to keep the stores open the greater part of the evening. Such cases, however, are exceptional. There is no reason why the public cannot do their shopping by 6 or 7 o'clock. If compelled to do so, people soon fall into that custom. It is very largely a matter of habit.

Why slave at the desk or the counter every evening in the week when such long hours are not necessary?

THE RESERVE DEMAND.

There are plenty of merchants who do nothing to change the even tenor of trade on account of their belief that demand is more or less of a fixed quantity, and that any unusual stimulation now must inevitably create a corresponding slackness later on.

This is, of course, an erroneous impression. There is a "reserve demand" which is reached by the merchant who conducts his business along aggressive salesmaking lines. A contemporary very aptly sums up this latent buying power as follows:—"It is a demand that is inactive until stimulated by some unusual call. That we are conscious of unfilled wants, and that we anticipate the time when those needs can be supplied, is a common human experience. This is one evidence of the reserve demand. The need exists, but its satisfaction tarries by the way, special circumstances only bringing this demand into operation. A great bargain sale, a fashionable bazaar, a salvage clearance, or a forced realization, all or any of these may attract the ready-money purchaser who in the normal course of events would remain quiescent."

People do not realize that they need a certain article until they see it in the store window or advertised in the paper. Had the dealer not been enterprising enough to make this effort, they might have gone on without the article indefinitely. Good salesmanship does not merely "hurry up" business; it creates it.

A good salesman is a man who can reach the reserve demand and stir up the latent buying power of the public.

WEDDING TRADE NUMBER.

In recognition of the importance of the June wedding present trade, next week's issue will be devoted to a thorough discussion of the retail problems in connection with the sale of the goods which will be in particular demand. Starting with the first week in June, there will be a steady call for silverware, cutlery, brass goods, cut glass, and all varieties of enamelware and household supplies. To capture a full share of this profitable trade, the hardware dealer must be wide-awake and aggressive. It will be our endeavor in next week's issue to present ideas which will be found useful and helpful in handling the June trade.

HUNDRED-TO-ONE SHOTS.

Another instance of insurance neglect which has resulted in a retailer's heavy loss has just come to light. It is not altogether a novel instance. There have been such cases before, but the pity of it is that there will be such cases again; ergo these paragraphs.

It was a week or two before last Christmas. A dealer in a Canadian city of about 50,000 people had just got in $15,000 worth of new Christmas stock. This, of course, was uncovered by insurance, which was a fortunate thing for an insurance solicitor who happened in shortly after the new shipment had arrived. From him the proprietor took a policy for $1,000. The solicitor urged that he take out more—pointed out that there was still $14,000 worth of goods uncovered.

The proprietor smiled—one of those superior smiles. "It is your business to get me to take a policy," he said, "it is mine to keep down expenses. This stock will only be here a fortnight or at most a month. I will sell practically all of it in that time. The thousand-dollar policy will cover what I do not sell immediately."

Whether the insurance agent said any more or not is not known, but it may reasonably be supposed that he was like the Irishman's parrot, and thought a lot. However, that is of little consequence. The point is that within a week that store was burned to the ground, with its $14,000 worth of uncovered stock. The proprietor, in his effort to keep down his expenses, had kept down his margin of safety.

This one man, who merely took what he considered an exceedingly small chance, was called to account. There are hundreds of others who wittingly or unwittingly make the same bet against fate. In doing this they run the chance of saving a few dollars or of losing several thousand. It is undoubtedly a hundred-to-one-shot in favor of the saving, yet is that saving worth the risk?

POINTED EDITORIALS.

Make your window displays stand out and there will be no doubt of the public showing an interest.

* * *

The "reserve demand" is what the aggressive salesman bids for.

* * *

The cry of the age for simplicity is reflected in advertising as in everything else. The fancy border and the old-time ornament are sadly out of date. May they always remain so.

* * *

The mails are being flooded with wedding invitations these days. Every one of those missives means the purchase of a wedding present. Ever look at it that way, Mr. Dealer?

* * *

The dealer who can turn his stock often is the one who makes a big profit on his year's work. Every time it is turned means another dividend on the original investment.

* * *

The lack of appreciation shown a prophet in his own country is felt in nearly every other line. The sending of the Made-in-Canada train through the West, is a bold bid on the part of the manufacturers to overcome any such prejudice which may exist.

The Gospel of Paint

THE hardware dealer is so often urged to "preach the gospel of paint" that it may be interesting to note down the points on which he might base his discourse.

First, the use of paint is the only way of protecting a building from the ravages of time and the elements. Everything, animate or inanimate, needs protection from the cold and the damp. Man wraps himself up in clothing, animals grow warm coats of their own, and buildings need to be covered with artificial preparations. Paint has been called by someone the "overcoat of the inanimate," and the name hits it off pretty well. A wooden surface soon cracks and rots if left exposed to heat, cold and damp. Covered with paint, it will resist as long as the paint lasts. Thus, the oftener paint is applied the longer the building will remain firm and strong. As one hardwareman, of an alliterative turn of mind, put it in an advertisement: "Persistent Painting Preserves Property." How would that do for a slogan during the more active painting seasons?

Furthermore, it is poor economy to postpone painting, for the longer it is left off, the larger the supply needed. "A coat in time saves nine."

Some men look on paint as purely decorative. "Spend money to decorate the barn!" snorts the farmer when the question of barn paint is broached. "Can't afford money for that any more than I can for diamond tiarys." He pays to insure his barn against fire; why not against decay? Property depreciation may not seem as real a danger as fire. In reality it is much more serious. Only a certain percentage of barns burn, while all decay. Paint checks decay more certainly than any other agency. Then, why not speak of it as "decay insurance," when you discover that the word "paint" suggests only a decorative substance to the mind of your prospective customer?

Point number two. Paint has wonderful decorative properties. It lends brightness and freshness. A pine frame can be given the semblance of marble by a few skilful touches of the painter's brush. Even the faded cheek of middle age can acquire the bloom of youth by the same process. Seriously though, the investment of a few dollars in paint will often add a few hundred to the value of a piece of property. Paint is a better salesman than the glibbest real estate man.

It is impossible to estimate the possibilities of paint for interior decoration. The modern home is a model of neatness and tastefully blended color, due largely to the comparatively recent discovery that paint makes a splendid covering for floors and walls. The days of mural monotony, when walls were merely necessary means of division, have passed.

Thirdly, and lastly, paint has a distinct value from the standpoint of health and sanitation. A painted wall can be kept clean with little effort. It resists dirt and damp. A well painted floor is a dry floor.

A talk in this strain will do much to convince people of a fact which has not reached many of them yet; viz.: that paint is a necessity, not a luxury. It may seem like exaggeration to claim such qualities for one commodity, but the claim is based upon facts. Paint is all that has been claimed for it—and then more. Sanitation, beautification and preservation are the three offices it performs; and in all three respects it is becoming a necessity.

The Made-in-Canda train photographed at North Toronto station.

Made-in-Canada Train Starts Out

A Big Effort to Advertise the Products of Home Manufacturers — Train Will Tour Through the West, Making 100 Stops in All—A Description of the Hardware Exhibits on the Train—Hardware Bulked Very Largely in the Exhibition.

The efforts of Canadian manufacturers to educate people to the use of home-made goods have culminated in the fitting up of a "Made-in-Canada" train, which is now on its way to the West. The train consists of ten cars all filled with interesting exhibits of goods made by Canadian manufacturers. It will stop at practically all important points through the Western provinces, and thus give the people an oportunity to inspect the goods. Lectures will be delivered at a number of the stopping places.

A tour of inspection through the train serves as an eye-opener to all who have not heretofore realized the growth of Canadian industry. Practically every line of manufacture is shown, and the products are in all cases of a high order.

The Itinerary.

The train started from Montreal on Thursday, May 16. On Friday it was at Ottawa, and on Saturday at Toronto. The Duke of Connaught paid a visit to the train at the latter point, and manifested considerable interest in the exhibits. On Saturday night, the train started westward, arriving at Port Arthur on Monday. On Thursday it had progressed as far west as Winnipeg. Altogether 100 stops will be made in the west. The itinerary will extend as far as Macleod, Calgary and Edmonton. It is not intended to enter British Columbia.

H. D. Scully, secretary of the Canadian Home Market Association, Toronto, has charge of the exhibition. T. H. Race is lecturer on the trip, and J. A. Ramsay is assistant to Mr. Scully. The exhibitors are represented on the train by men who are looking after the displays and pointing out their virtues, and in the various stopping places Mr. Race is illustrating his lectures by lantern slides. The party comprises twenty-five men, including electricians, car cleaners, handy men, etc. During a trip lasting fifty days and covering a distance of 6,500 miles, the party will live on the train.

The Hardware Exhibits.

A large percentage of the exhibits are by manufacturers of hardware lines. In fact, hardware predominated to quite a marked extent.

On entering the train, the first coach passed through was used as a model furnished house.

Handsomely equipped rooms were shown, evidencing that Canadian manufacturers are turning out goods calculated to appeal to the luxurious and aesthetic instincts. Each article shown had been supplied by a different firm. The hardware manufacturers who had contributed to the fitting up of this coach were: James Morrison Brass Mfg. Co., Toronto; Stauntons Limited, Toronto; Dominion Oilcloth Co., Montreal; Brandram-Henderson Limited, Montreal; Gurney Foundry Co., Toronto; Standard Sanitary Manufacturing Co., Toronto; Hamilton Stove and Heater Co., Hamilton; Imperial Glass Co., Toronto.

The nine other coaches were used for the exhibit of individual firms. Among those showing were:

The Gutta Percha and Rubber Manufacturing Co. showed their line of tires and rubber goods.

The Canada Cycle and Motor Co. showed bicycles, sporting supplies of various kinds and their heavier lines of manufacture.

The National Cash Register Co. had samples of various sizes of registers. Demonstrations were given for the benefit of interested spectators.

A handsome assortment of flatware and hollowware was shown by the Toronto Silver Plate Co. A number of handsome trophies made by the company, including the Hanlon Memorial Challenge Trophy added interest to the exhibit.

The Sheet Metal Products Co. had a striking display of some of their best known lines. Enamelware of all descriptions was shown. Icewater filters and lanterns were also features of the exhibit.

The Canadian Fairbanks-Morse Co. showed various types of engines connected up and ready for operation. Power was at hand for demonstration purposes, and some of the engines are in full operation at all times.

The Steel Co. of Canada had samples of all their products displayed on panels. The panels swung from one central support and the complete line of nuts, bolts, screws, etc., could be inspected conveniently.

The Ideal Bed Co. had an interesting display of iron, brass and silver beds, garden seats and swings. A silver bed, electric lighted, was the main object of attention.

The Gurney Foundry Co. had samples of their best known types of stoves and ranges. For demonstration purposes the various parts were open, and the entire working of the stoves could be shown. A large sized model of the Gurney Economizer occupied the centre position.

The Dunlop Tire and Rubber Goods Co. showed a complete line of their goods.

James Morrison Brass Manufacturing Co. showed samples of their brass products. Marine, plumbing, steamfitting and engineering supplies were included. A yacht telegraph apparatus drew the most attention in this exhibit.

The McClary Manufacturing Co. showed stoves and ranges, each stove being thrown open to facilitate inspection. A large hotel kitchen range occupied one end of the exhibit. Many of the smaller lines manufactured by the McClary Co. were also on display.

The Dominion Cartridge Co. showed their full line of ammunition and sportsmen's supplies. This exhibit drew a lot of attention.

Brandram-Henderson Limited had a large exhibit of their paint and white lead products. A model apparatus showing the process of manufacture of white lead was the centre of interest.

The Asbestos Manufacturing Co. showed their various lines of manufacture.

Literature Given Out.

At practically all the exhibits, printed literature was handed out. This will be done right through the West, and a great deal of information will be disseminated in that way.

Hardware Store Publicity

Chapter 9.--- Borders and Ornaments

A gaudy frame detracts seriously from the appearance of a picture. It is the same with advertising. No matter how forceful and well prepared an advertisement may be, a clumsy border will take away a part of the good effect, at least.

At one time the aim of the printer was to achieve fancy effects. The ornate border was much in favor. Little "curley-ques" were inserted at the ends of lines and in all available corners. The same was true of most everything else at that time. Furniture was judged by the profusion of ornamentation that it showed. Architecture leaned to the same order. Railroad coaches were almost barbaric in their splendor. Scroll and grille work were deemed "the last word" in decoration.

The pendulum of popular approval has swung to the other extreme now. Simplicity is the order of the day. Straight lines have superseded the intricacies of pattern once favored. Restful, comfortable effects are sought for. It is not surprising that the influence of this reform movement has made itself felt in printing. To-day the printer aims to set advertisements as simply as is compatible with the text, eschewing the fancy borders and ornaments. A distinct improvement has been wrought. Dignity has come with simplicity. A typical ad. of to-day has double the selling power of the kind so popular twenty years ago.

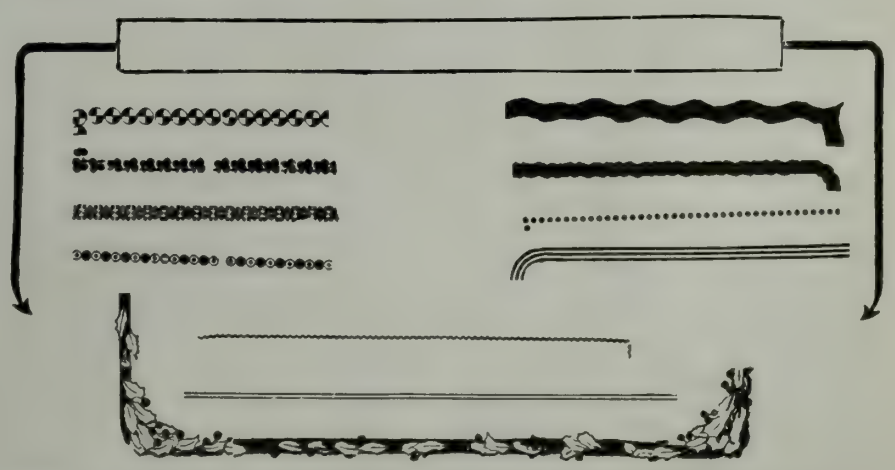
However, old fashions and styles die hard. Some people still love the highly ornamental and printers are not exempt. Skim through a few of the smaller newspapers and evidence will soon be found that some printers (or advertisers perhaps), have neglected to keep up with the times.

Criticism of Borders.

The accompanying illustration shows a number of borders clipped from hardware advertisements in Canadian newspapers. The large border at the top is not what might be termed a "stock" border. It has been made up to suit the advertiser, the panel being used for the name of the firm. The arrow has come to play a prominent part in modern advertising and in the present instance it can be used effectively to point out illustrations or statements which it is desired to make prominent. It is not always wise to seek original effects but this border can be used to good advantage.

Below are found a collection of the most common types. All these borders are still in more or less general use.

The four samples at the left are, we judge, of the Mesozoic age in advertising. These fancy fandangle borders are so old and obsolete that it is surprising they are met with so often. Nevertheless they are still affected and advertisers often ask for them. It is not uncommon for an ad. writer to say: "I want a good border, the fanciest you have in the shop." When the printer receives instructions of that kind, he rummages through a dust-laden case and produces some such pre-Adamite design as the four shown. The advertiser is probably satisfied but the public, who have achieved a pretty discriminating taste in advertising, are not slow in noticing the use of typographical relics.



To the right are shown four more sample borders of a rather more recent date. The heavy waving lines are probably not as objectionable as the fancy samples shown to the left but they are not estimated very highly by good judges. The three-line border shown is used quite a lot and often with good effect.

At the bottom are shown two borders now used very largely—one, a single star line and the other a modest two-line rule. The star line is quite popular, but it does not rank as high as the two-line rule, which has simplicity and dignity in a marked degree.

Original Borders.

It is not unusual for a retailer who does considerable advertising to design a border of his own and use it continuously. This custom has many advantages, the chief of which is that the public soon becomes familiar with the border and associate it at first glance

(Continued on page 44)

Sample borders taken from hardware advertisements in Canadian newspapers.

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 12 shows how to draw an equalateral triangle (triangle with 3 equal sides) and how to find the centre of same.

Make the line A B of Fig. 1 equal to one side of the desired triangle. Set the point of the compass at B, and with the lead at A, and describe the arc 1, 2. Set the point at A, and with the same raidus describe the arc 3, 4, cutting 1, 2, and from the intersection C, draw straight lines to A and B.

Fig. 2 shows method of finding the centre.

Set one point of the compass at A, and with a radius equal to about ¾ of the distance between A and C, describe the arc 1, 2, and 3, 4, with the same radius, and C as centre, describe the arc 5, 6, cutting 1, 2. Also draw the arc 7, 8.

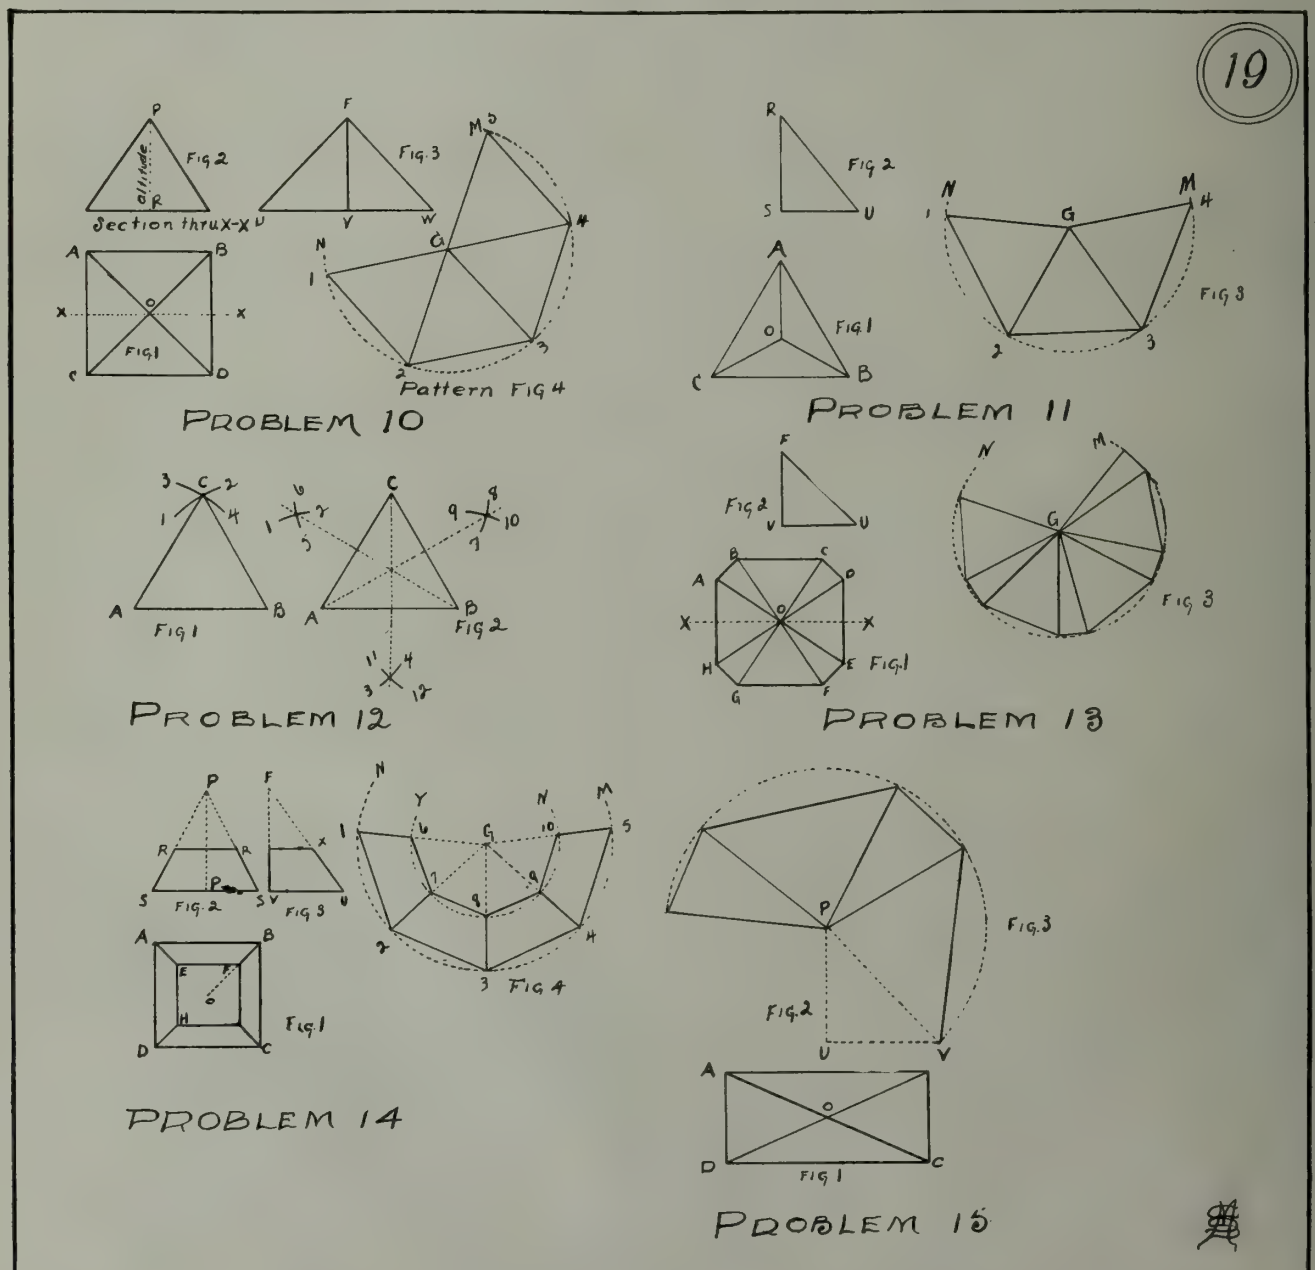
Then with B as centre and the same radius describe the arcs 9, 10 and 11, 12, cutting 7, 8 and 3, 4.

From the intersections draw lines into the opposite corners, thus developing the desired centre.

Prob. 13 shows method of developing an octagonal pyramid.

Draw the outline A B C D E F G H of fig. 1, then draw lines into the centre O.

Draw the base line V U of fig. 2 equal to any one of the diagonal lines of fig. 1, as B O.

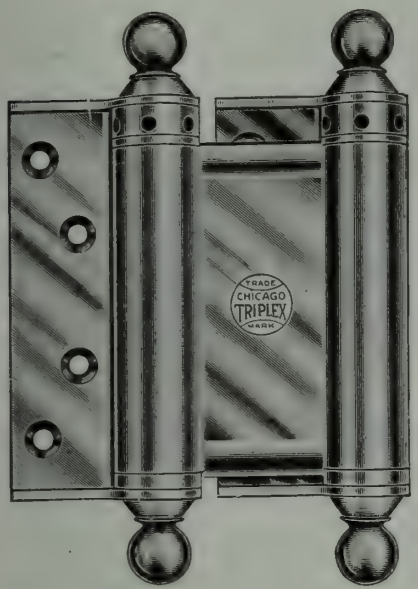


Erect the perpendicular line V F any height desired. Then a line drawn from F to U gives the true length of the hip.

Set the compass to the space F U, and with any convenient point as centre describe the arc N M.

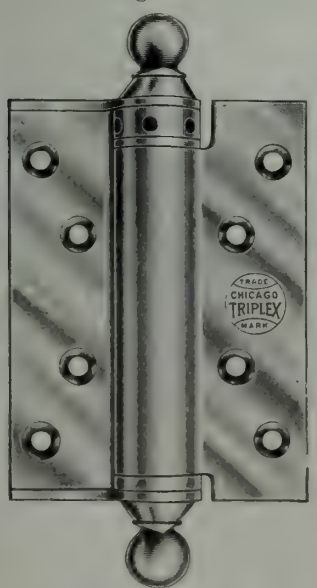
Lay off on this the perimeter of fig. 1 and draw lines into the centre G.

Bonus to Firm.



St. Catharines ratepayers have sanctioned a bonus of $4,000 to the Canadian Warren Axe and Tool Co.

New Hardware Goods



TRIPLEX SPRING HINGES.

The Chicago Spring Butt Co., Chicago, have placed their latest type of "Triplex" spring hinges on the market. The body of the hinge is made of one integral piece and of unique formation, per-

mitting the use of heavy metal in the entire construction with three-ply ("Triplex") of heavy metal at the end portions between the barrels.

The bearings are arranged to reduce to reduce friction to a minimum. The tension lug operates in a hardened steel bushing, providing a broad bearing surface for the weight of the door and

furthermore the spindle of the lug sleeves into a neck in the bushing.

The bronze and brass metal hinges have a specially constructed body of a seamless intact metal surface and interior steel construction, by which the possibility of wear or breakage is eliminated and the durability of the bronze or brass metal retained.

SURE-LOCK TIE ROPE.

The Canadian Rope Buckle Co., Hamilton, have put out a new tie rope which is herewith illustrated. It can be fastened at any point along the rope, making a loop that will not slip or give. Among the advantages claimed for it is that it has no springs or snaps about it; that it does not rust, being tinplated; that it does not break, being made of malleable iron.

The tie rope closed.

The tie rope open.

This tie rope can be used for other purposes. It is adaptable for use on boats and for swinging hammocks; the latter being a particularly important point from the standpoint of the hardwareman.

ROWBOAT MOTOR.

The Jewel Electric Co., Chicago, are marketing a detachable electric rowboat motor. This portable device weighs complete twenty-five pounds, and can be attached in a few minutes to any canoe or rowboat by means of adjustable clamps. One can pack this small rowboat motor under the seat of an automoblie or in a suitcase, and visit any summer resort, using any canoe or rowboat he may find there.

The electrical motor is mounted vertically on a supporting tube and has a maximum speed of twenty-five hundred r.p.m. Two six volt sixty ampere hour storage batteries connected in series supply current for the motor. The motor is direct connected to a vertical transmission shaft about two feet above the water line.

The power is transmitted to a pair of special gears, somewhat similar to the worm gear type. The circular gears operate in a gear housing below the water line and change the vertical power transmission to the horizontal propeller shaft.

The lower gear housing and the two blade weedles propeller are made of an alloy of aluminum which reduces the weight of the motor so that it can be carried with ease, packed in a suitcase. The entire outfit is highly nickeled.

The lower bearing of the motor is screwed into the vertical supporting tube, and the motor shaft slips into a groove socket in such a manner that when the motor is unscrewed the entire machine can be taken apart in a few seconds and packed in a carrying case.

The rowboat motor is used both as a propelling device, and also as a rudder. The slightest change in the angle of the propeller changes the direction of the boat. Direction of boat is reversed by simply turning the entire motor on the swivel arm.

Lesson 15---Course in Cardwriting

Presenting the Up-and-down Style of Roman Lettering Executed With the Round Writing or Square Pointed Pen—Favored Style of Lettering for Fine Show Card Work and Price Tickets.

J. C. Edwards. Copyrighted, Canada, 1911.

LARGE glaring letters make good signs, but not show cards for modern, refined advertising. Some stores, of course, want bold, black letters, but the up-to-date store that caters to the better trade does not want such screaming announcements with their display. This is where pen lettering comes in for a goodly share of recognition.

The Pen for Small Work.

For price tickets and for the finer grade of work the round writing or square-pointed pen, in its various sizes, is a prime favorite with up-to-the-minute card writers. There are two different makes, but practically no difference exists between them, so that a cardwriter cannot make any mistake in asking for the square-pointed pen for show card lettering.

It is Not Mechanical.

Pen lettering has not the mechanical appearance that the shading pen, that double-pointed impractical contrivance, has. Like other pens, the lettering pen is steel, but there is not the mechanical, ready-made look about the work that the shading pen work has, whether poorly or well executed.

The Pen and the Sizes.

In style this pen is made much the same as ordinary pens, with a fairly deep hollow of oval shape in the centre which retains the ink. The point of the pen is square, but not square across. It slants a trifle to the right as you hold it in position. This allows for the natural position while writing with the right hand. A left-handed person would find considerable difficulty in learning to operate the pen owing to this fact. The pen is made in about eleven sizes ranging from 1, the broadest, which is about one-eighth inch wide, to No. 6, a pen practically no wider than a narrow stub and of little use to card writers.

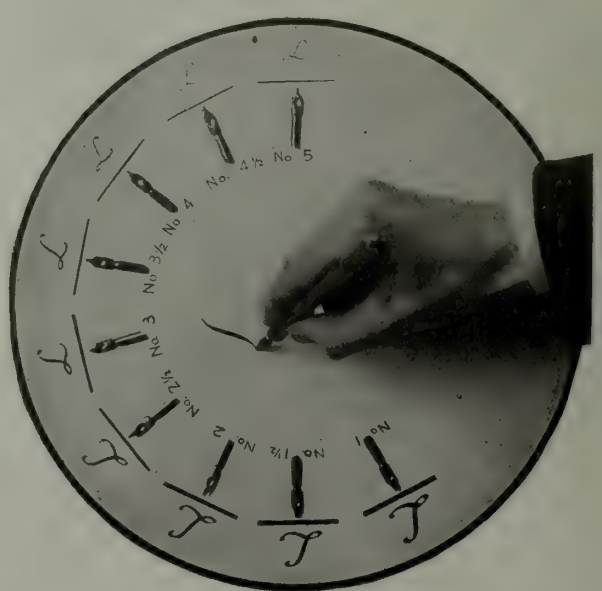
The Best Sizes to Use.

For the larger cards, where a letter stroke is needed about one-eighth inch wide, the No. 1 pen is the best; then I would suggest Nos. 1½, 2½ and 3½, and for very fine work a No. 4; anything smaller than that is little better than an ordinary pen. You will notice in the illustration the sizes of the work done by the different pens. This picture, of course, is greatly reduced, but you can get an idea of the comparative sizes of the strokes each pen makes.

Holding the Pen.

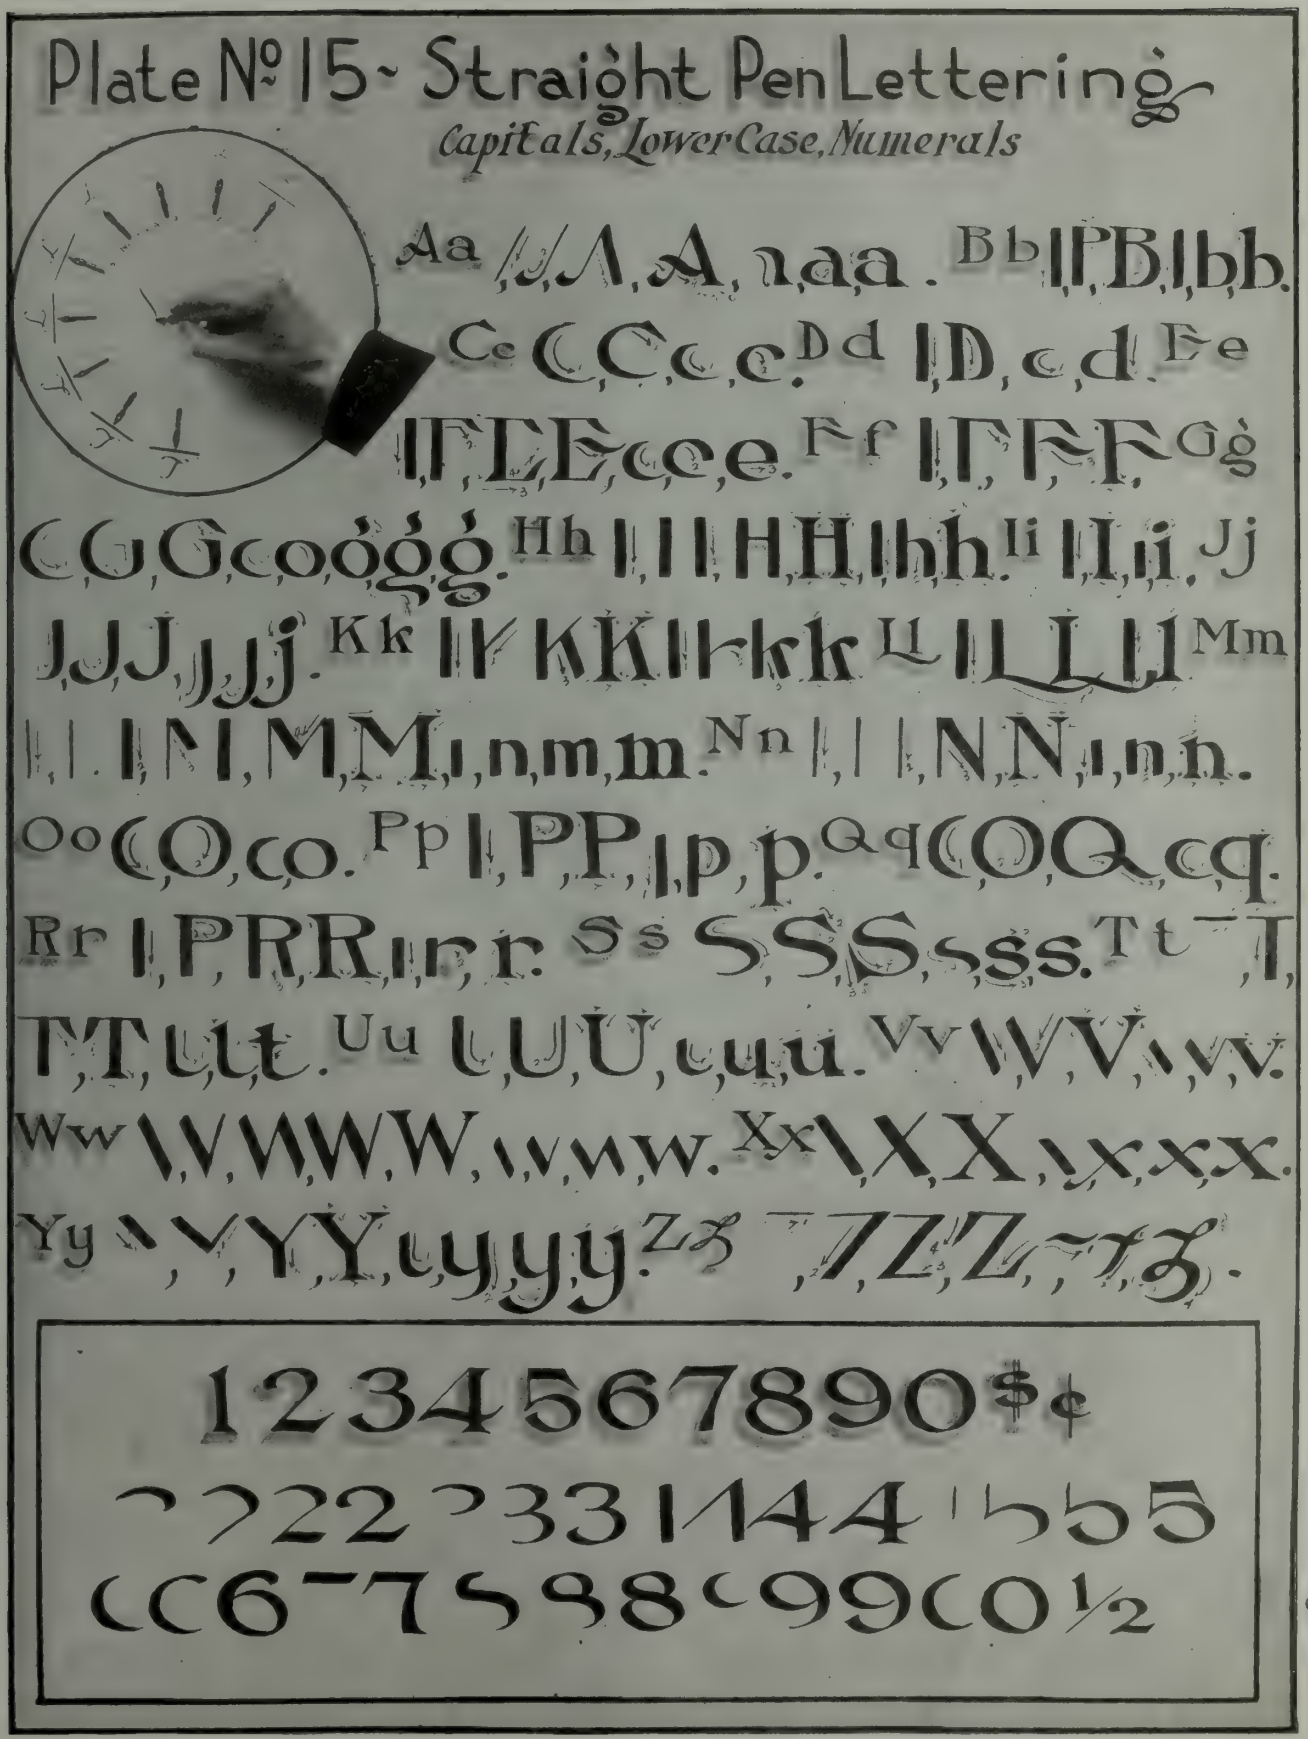
Take the pen holder (any ordinary holder with sufficient grip to insure against slipping) in your hand as illustrated above without cramping the fingers. Allow the hand to rest lightly on the side of the small finger, between the tip and the first joint. Let the pen rest firmly on the cardboard at the angle suggested by the illustration. Note the stroke and the position of the pen point. The fine line of the stroke is made by the edge of the pen and the wide part by the width. Don't turn the pen to accomplish this. Just practice. Practice a sure, quick stroke and you will get cleaner edges on your lines.

Eccentric Letters Not Practical.



You will notice in the plate that the letters "L" and "X" are eccentric, or are carried beyond their usual face area, either over or under the line. This may be used to some extent, but it is not practical for all styles of show cards. The right hand strokes of "V" and "Y" may also be made the same as the "X."

The first or top ticket shows the inscription and the price of equal strength. In this case one is as important as the other and should catch the eye at one time. To do this, it is unwise to have a long catch phrase; something short and crisp is better. The second ticket gives prominence to the price, which stands out larger and is the first to attract one's attention. The lower ticket, while it quotes the price, does not tend to bring it out as the main feature, but rather invites your attention to style or quality of the article. A ticket like this is quite in keeping with the first style showing.



Many and varied are the styles and sizes of price tickets attached to articles on display, but the regulation ticket is made according to a scale. A full size sheet of cardboard measures 22 inches by 28 inches, a half sheet measures 14 inches by 22 inches, the longest way being divided in each case; the quarter size is 11 by 14 inches, eighth size is 7 by 11 inches, and the sixth, as shown above, is 5½ inches by 7 inches. The last named is the best size for ticket for large articles such as clothing. Every card writer should use his best judgment in selecting tickets for the various articles and it is often advisable to vary them by way of relieving monotony.

Always carry out one idea throughout an alphabet. When you commence to make one style of letter such as ending the first stroke of the lower case "a" with a spur, always carry this point out in such letters as "h," "d," "k," and so on; but if you make it rounding, do the same with the rest of the letters where a letter ends with a complete stop for it is one of the card writer's best friends.

Try this lettering with the square-pointed pen as shown above and practice it diligently until it is mastered, as the above mentioned.

The pens here shown with the size of each marked and the comparative width of work done by them. The proper position of the pen in the hand while lettering is demonstrated.

A practical useful letter for pen work is described in this cut. Note particularly sizes of pens to use for different grades of work.

Progressive Hardware Retailing

Maritime Firm Places Drinking Fountain at Main Entrance—John Fennell & Son Selling Out Retail Stock—Result of Guessing Contest—Notes of the Early Closing Movement—Going After the Binder Twine Trade.

RESULT OF CONTEST.

Guelph, Ontario.—Some time ago the Guelph Hardware Co. offered a $40.00 steel range to the person guessing closest to the number of tacks in a jar, which was placed in the window of the store. Guesses were allowed on all purchases over a certain amount. The firm were flooded with guesses, and a great deal of interest was manifested in the result. The number of tacks in the jar was 1,156, and the winner guessed 1,155.

SELLING OUT RETAIL STOCK.

Berlin, Ont.—John Fennell & Son have decided to dispose of their retail department and are holding a big sale to clear out the stocks. They are advertising the sale as follows:

"We have decided to dispose of the retail department of our hardware business, and to this end you will find our prices enormously reduced. We wish to convey to the public that this is no fake sale, but a downright real clean out of this branch of our business. The stock includes all shelf hardware, domestic and household goods.

"Farmers are asked to note that this sale includes all garden and field implements of which we carry a very large and complete stock. Let us also remind you that this offer covers only what we have in stock—there will be no replacing after what we have is sold. The first to come will have their wants best filled."

EARLY CLOSING MOVEMENT.

Wapella, Sask.—The merchants and business places are closing on Thursday afternoons during the months of June and July.

Winchester.—A by-law has been passed to provide for the early closing of places of business. From the first day of January to the 30th of November all shops must be closed at seven o'clock.

INSTAL DRINKING FOUNTAIN.

St. John, N. B.—With their usual up-to-date methods to the fore, the hardware firm of T. McAvity & Sons, King Street, have installed in the front of their store in order to attract attention and interest, a modern, latest design bubble drinking fountain. The font is a distinct advertisement, and it is also a means of displaying the advantages of sanitary methods about the home, the shop, or the factory, combining as it does the essential features of an ideal drinking fountain, namely, perfect sanitation, durability, and appearance. The fixture is designed with a porcelain-enameled pedestal, and is fitted with nickel-plated bubbling valve. In drinking the water is delivered from the source in all its purity, eliminating the use of public drinking cups and their attendant risk of contagion.

The unanimous verdict of dealers in hardware who conduct sporting departments in connection with their business is that never in the history of their commercial career have they had such a satisfactory spring in their lines therein carried, and they are decidedly well pleased with the showing made. All the St. John and Fredericton firms carrying sporting goods have featured them exceptionally well during the past few weeks, and are continuing to do so until the last of the month, and the run on the various lines, particularly fishermen's accessories, has been very encouraging.

Baseball supplies are another feature in which the sporting departments are having nearly as much as they can handle comfortably. In St. John, Moncton and Fredericton the sport is being boomed this year with major and minor leagues, and the demand for all articles used in this connection has been far above the average. The windows of the hardware houses show the trend of public taste in that they have carried extensive displays of baseball supplies and featured them attractively.

The firm of Emerson & Fisher, in Germain Street, St. John, this week attracted much attention in the manner in which they showed their stock of baseball lines, and much interest centred in their display. One of their large windows was devoted entirely to a nicely arranged showing of bats, gloves, balls, etc., and in the centre of the appliance were shown three pictures. One of these was a very long one showing a champion American team which used their lines of goods exclusively, another was a local champion team of recent date, and the third was a picture of an old-time aggregation in St. John, those who were really the fathers of the game in this city.

A DEMONSTRATION.

Harrow, Ontario.—On Wednesday and Thursday a demonstration of a varnish preparation was held in Richardson's hardware store. A lady demonstrator was on hand and good sized crowds attended.

Harrow merchants have decided to add another month to their daily half-holiday season, and the first half-holiday this year will be on the first Thursday in June. Practically the month of June offers as great inducements to the merchants and his clerks as the months of July and August.

THE BINDER TWINE TRADE.

Perdue, Sask.—Rideout & Sheck, hardware dealers, are making a timely bid for the binder twine trade in their vicinity. They are using the scarcity which existed last year as a reason for farmers buying early this year while supplies are good.

In order to meet the demand which they anticipate as a result of their advertising they are stocking up early in binder twine.

HARDWARE STORE PUBLICITY.

(Continued from page 39)

with that firm. Anything about an advertisement so distinctly individual as to compel immediate recognition is a great asset.

There are times when a merchant requires a special form of border. At Christmas time, for instance, it is well to use a border which has a suggestion of yuletide about it. The rules laid down for everyday practice go to the boards, to some extent, when special occasions arise. The holly border shown in the illustration is an effective one to use for Christmas advertising, even if it does lack the simplicity sought after for regular advertising work.

The use of ornamental effects is not now favored. Good display type, set with an eye to balance and effect and backed up by illustrations constitutes the commonly accepted idea of an effective ad. The use of ornaments detracts from the strength without adding anything to the appearance of an advertisement.

Current News of Hardware Trade

New Retail Store

Bawlf, Alta.—Paulson Bros., dealers in hardware and furniture, have opened a branch store at Cadogan.

Alterations in Office.

Alterations are being made in the offices of A. Ramsay & Son, Montreal, larger space for the executive staff having been rendered necessary.

Nearly Completed.

Guelph, Ontario.—The new factory of the Guelph Stove Co. is nearly completed. It is expected that it will be occupied in about six weeks. The staff will be about doubled then.

New Plumbing Firms.

The following new firms have started in the plumbing business in the West: Fred Read, at Prince Albert; James Brandon, at Saskatoon; Pierce & Scott, at Saskatoon; Charles Geiser, at Saskatoon; Seater & Parnell, at Saskatoon.

Underwent Operation.

Picton, Ont.—Major Milton Adams, of the firm of Adams & Vandusen, underwent an operation at the Toronto General Hospital during the last week of April. Since then he has sustained an attack of appendicitis, from which fortunately he has recovered. An operation may be necessary later, however.

A Plumbing Department.

Battleford, Sask.—The annex to the Battleford Furniture Co.'s store has been completed, and is now equipped with an up-to-date plumbing and steam fitting establishment. One feature of the newly-appointed store is a bathroom display.

To Play Baseball.

New Liskeard.—The hardwaremen of the town have entered the local baseball league. The team will take the field as follows:—T. Magladery, W. Magladery, Miller, Jewell, W. A. Taylor, Grills, Gibson, McLean, Cox, J. Taylor, F. Ferguson, Hardman and Horton.

To Move Store.

Trehern, Man. — An effort was made to move Harvie's hardware building on Tuesday, with a gasoline tractor, but the ground was so soft the skids became buried before the building could be moved any distance.

To Give Fixed Assessment.

Bridgeburg, Ont.—A by-law is being put before the people to set a fixed assessment for a number of years on the lands of the Tuttle & Bailey Manufacturing Co., who are establishing a factory here for the manufacture of registers, ventilators, grilles and screens.

Damaged by Fire.

Selkirk, Man.—A. B. Hill, tinsmith, of this place, had a serious fire, his stock being damaged. Quite a heavy loss was sustained.

Brantford, Ont.—Lightning struck the main building of the Farmers' Binder Twine Company plant, and in a few minutes the building and machinery were in ruins from the fire which resulted. The loss is estimated at $75,000. Two firemen, Fred Howarth and Ernest Wilde, went tumbling through the roof, a distance of twenty-five feet, and both sustained severe if not fatal injuries.

To Build 5-Storey Block.

The Edmonton Paint & Glass Co., are going to build a five-storey block on Fifth avenue, Edmonton. It will have a fifty-foot front and will extend back one hundred and ten feet. The cost will be in the neighborhood of $60,000. The excavation for the foundation has already been begun.

Engagement Announced.

Early in June will be celebrated the marriage of Miss Yvonne Lariviere, the only daughter of M. Frederic C. Lariviere, past president of La Chambre de Commerce, of Montreal, and president of the well-known hardware firm of Lariviere, Incorporee, to J. Arthur Villeneuve, merchant, son of Leondias Villeneuve, ex-mayor of the town of St. Louis, now one of the wards of Montreal; also president of L. Villeneuve & Co., Ltd., wholesale wood dealers.

Those who in 1909, had the advantage of taking part in the Montreal excursion of the Ontario Retail Hardware and Stove Dealers' Association will remember Miss Lariviere, who assisted her mother at the reception given to the members at Lariviere Incorporee's store.

Montreal Notes.

Richard Terrill, of Caverhill-Learmont's, Montreal, is back at business again, after having been laid up for the past fortnight.

George Caverhill, of Caverhill-Learmont's, has returned from a somewhat lengthy trip to Engalnd and the Continent.

New Retail Firms.

Darlingford, Man. — Coleman & Co. have started a hardware store here.

Norwood, Man.—The Glenwood Hardware Co. have started in business here.

Neville, Sask.—A. Armason has started in the hardware business here.

Viceroy, Sask.—The Viceroy Hardware and Coal Co. have started in business here.

Kamloops, B. C.—Mastlatt & McKenzie have started a hardware store here.

Staff Changes.

H. Fordham, formerly bookkeeper for the Sheet Metal Products Co., Toronto, has been engaged in the same capacity by Brandram-Henderson, Ltd., Toronto.

Sydney, C. B.—Bert McLean, who was manager of the McLeod Hardware until the merger of that business with the Thompson, Sutherland Co., has assumed the management of the Sydney Ice Co.

Harry Creed, of Fredericton, N. B., who for some time has been in the employ of R. Chestnut & Sons, has accepted a position with a hardware firm in Saskatoon, and has left for that city to take up his duties. Before leaving, Mr. Creed was remembered by his fellow employes and made the recipient of a handsome traveling bag, both from them and from the members of the firm, in recognition of the esteem in which he was regarded.

Willard O. Bagnell, who for nearly ten years has been a member of the staff of W. H. Thorne, Ltd., St. John, N. B., has severed his connection with that company, and taken a position with the Sussex Mercantile Co. His associates regretted his departure and showed their appreciation in the presentation of a suitable remembrance.

Business Changes.

Kamsack, Sask.—T. Miles, hardware, lumber and furniture dealer, has sold his hardware department to J. G. Hallson.

Moose Jaw, Sask. — The hardware business of J. H. Buchanan has been taken over by the Peart Bros. Hardware Co., of Regina.

Montreal, Que.—J. E. Germain has sold his hardware stock.

Miami, Man.—Lawrence & Campbell, hardware dealers, have dissolved partnership.

North Bay, Ontario.—The hardware store building owned by Purvis Bros. has been offered for sale. Five years ago Purvis Bros. sold their hardware stock to Mackie Bros., who afterwards sold out to the Cochrane Hardware Co. The lease has now expired. The North Bay store of Purvis Bros. was started by D. Purvis in 1888.

Weekly Market Report --- Metals

COPPER HIGHER.

The feature of the market is the continued firmness of copper. A further advance of 50 cents was recorded this week.

There is a tone of firmness noted all through the metal markets. Demand is extremely heavy in most lines.

MONTREAL.

Montreal, May 23.—The general good ordering, and the continued upward tendency of copper, features the metal market this week. True, there has been a slight decline in copper on the primary market, but this is only a temporary change. The movement of this metal seems to be upward—ever upward.

Tin, too, is high, though as so often happens before the Banca sale, a drop is noted. Of late there has been some speculation upon the question of the control of tin. Has the metal, it has been asked, got away from the control of any syndicate? The present drop would make it appear that the syndicate—be it new or old—still is able to influence prices to some extent. On May 30th, 2,700 tons will be added to stocks. Either the knowledge of this coming addition to the supply, or the desire to depress the market so that the Banca tin can be bought at a low figure, is affecting present prices.

Don't Look for Drop.

That this lower figure will endure long none seem to expect. Tin has risen rapidly of late, and as supplies are moderate, and the demand heavy, there does not seem to be any reason to expect a drop.

Iron at present is higher than it has been for years, but the jobbers have not yet advanced the prices to small buyers. That they will have to do this shortly seems certain.

Metals generally are fairly plentiful, with lead the exception. There is but little of this to be had.

Copper.—A months ago ingot copper could be secured for $17. Two months or a little more ago and $15 was the price. But now, so rapid has been the rise of the market, that handlers have been forced to make a further increase in their price, and present quotation are $18.50. Nor does there seem any likelihood of a lower level. Copper is in demand. Copper is none too plentiful, ergo people must pay for it.

Bars and sheets have not been further advanced locally, although the handlers are having to pay more for these. It is very likely, therefore, that there will be a higher price set upon them within a week or more. Indeed, should ingot copper go higher nothing can prevent an advance in the bars and sheets. When this comes it will probably be a cent a pound.

Tin.—Undoubtedly the temporary drop which there has been on the primary market is attributable to the Banca sale. This once over—and it will be over in a week—the metal will almost certainly retain its firm tone. That it will go higher is not certain, but the present is being regarded by many as a good time to buy.

The supply of tin is ample. Manufacturers can get about what they want, only they have to pay the price for it.

High Price of Iron.

Pig Iron,—While supplies are good the prices being paid for the metal are high—higher than they have been at any time since the high level of 1907. As has been said there has not yet been a change in prices quoted for buyers in fair-sized lots, but this change will come.

Spelter.—The arrival of some Belgian spelter has relieved the local situation. Supplies were none too large, but this importation enabled all orders being filled.

Lead.—Trail lead is exceedingly scarce. But there is some English lead on the market, so a famine is averted. Supplies, however, are not by any means sufficient.

TORONTO.

Toronto, May 23.—Business in metals has been very brisk. Transportation troubles have had some effect on the market but the general activity has not been checked to any appreciable extent by the slowness of deliveries.

The dominant tone of the market is firmness. Copper is higher and tin, though it has been a little uncertain, remains at the same high notch. Pig iron is very firm and higher prices are being asked than at any time last year.

The consumption of metals is reported to have shown a marked increase so far over the same period last year. Steel for structural and railway work is in heavy demand and the consumption of pig iron testifies to the activity in industrial circles.

Tin.—The market here was affected to some extent by the decline on the primary market. The proximity of the Banca sale is accepted as the reason for the drop, however, and it is believed that the former level will be regained immediately. There has right along been a feeling in the trade that the firm who represented the late Syndicate in tin, and who is certain to be the largest buyer at the Banca Sale, would take steps to weaken the market prior to the sale. It has been thought, however, that such a programme would probably fail, for the reason that it is claimed by the bull party that the situation of tin has got beyond the Syndicate control, in other words that pig tin is selling at the present high price on its merits, and on the very strong statistical position.

Copper is stronger.

There seems to be no stopping copper. A higher level was registered this week when the price was put at $18.50—a 50 cent advance over the previous quotation. The market is firm and quite active. In fact, the consumption is so steady that metal men are not anticipating any weakening in the price, despite the big advance which has been made in the last three months.

Copper is reported to be none too plentiful by some firms. The demand has been so continuously heavy that some stocks have been reduced.

Lead.—The price of lead has been firmer, any tendency toward weakness which may have been noticed recently having been most effectually vanished. That it will continue firm and high is the opinion here. The demand continues very heavy and stocks are said to be rather on the light side.

New Life in Spelter.

Spelter.—New life has been infused into the spelter market. Demand has been pretty brisk and rumors are heard of impending advances.

It is interesting to note that all talk on the American markets is of a decidedly bullish trend. A despatch from New York reads: "Market is very firm for early deliveries, prompt metal is scarce and strongly held. Some extraordinary statements are credited as coming from certain producing interests in the West in regard to the position of the market, prices at which sales are being made, and the advances in price that will take place in spelter later on. The advance in iron products, including galvanized iron, has slightly improved the situation of the galvanized sheet manufacturers as regards any new contracts they will make, but it is really very little relief, as these manufacturers are under contract to deliver for months to come at the previously low price.

Weekly Market Report --- Hardware

TRADE HANDICAPPED.

The weather has been distinctly unfavorable but the hardware trade has not suffered as much as might have been expected. Trade, though delayed, is showing signs of reaching healthy proportions.

The transportation problem is causing more worry than the weather. Quite a serious congestion has resulted.

An advance in copper goods has featured the market this week.

MONTREAL.

Montreal, May 63.—This unseasonable weather is not what is wanted to bring the best results to the hardware dealer. Nor is it the thing needful to make the goods move rapidly off the jobbers' floors. That business has been good is in spite of the weather and not because of it. Let the sun once become really warm; let the sight of the straw hat excite no amusement or sarcastic remarks, and business will experience a boom.

The week has not been without its price changes. Appropriately to the spring this is a season of changes. It is copper rivets and other copper goods which have advanced most rapidly this week, but for builders hardware too there has been a strong market. The prices of this line have not been definitely raised as yet, but this change is confidently expected.

Oh! For Warm Weather!

Household Goods.—Screen doors, refrigerators, washing machines and such lines are in demand. So are step ladders, pails, mops, and the many articles needed for housecleaning. A little warmer weather will do much to stimulate the demand here as elsewhere.

Builders' Hardware.—Here the unseasonable chilliness of the air has not had any great influence upon orders. The goods are needed for the buildings nearing completion, and the goods are being bought. A number of dealers, moreover, are ordering more than they need for immediate sales, appreciating the fact that the continued advance of ingot copper pressages a higher price being set upon all builders' hardware.

A Ten Per Cent. Jump.

Copper rivets were advanced during the week, the discount now being 35 and 7½ in place of 35 and 12½—a jump of something like 10 per cent.

Copper goods generally are quoted at 10 per cent. higher, and it is predicted by some that valves may advance still farther.

Harvesters' Tools.—Only some heat is needed to make the demand brisk. The dealers are going after business in the right way. They are displaying their goods in attractive forms, but a suggestion from the weather is needed to supplement the suggestions given by the windows and other forms of advertising.

Garden Furniture.—For lawn chairs, swings, and for awnings good-sized orders are being placed. This class of goods is becoming more and more popular—doubtless owing to the more moderate prices now asked. The business in this line has more than doubled in the last year or two. Dealers are finding here a profitable line.

Sporting Goods.—When the time for baseball, lacrosse and other summer games comes, these are going to be played no matter what the weather. But the chilly days and nights are having a deterrent effect upon sales of acquatic goods—paddles, canoes, etc.

TORONTO.

Toronto, May 23.—Wholesalers state that the unfavorable weather is not hurting trade as much at the present time as might have been expected. The effect was unfavorable earlier and demand was undoubtedly held back. Now, however, the dealers are ordering in good bulk in the anticipation of an immediate improvement.

On the whole business in wholesale hardware circles has been good this year. Jobbers state that they have made more or less substantial gains over last year in the face of the unfavorable weather conditions which have prevailed almost from the first of the year. If the spring had opened earlier, the result would have been a record trade for the first four months of the year.

The transportation problem is still worrying the wholesalers considerably. Not only is it difficult to secure supplies and make shipments but the conjestion has resulted in goods going astray. The situation has reached a serious stage.

Some Shortages.

The result has been a shortage in a number of lines. Many lines of manufacture secured from American points have been hard to obtain as a result of the slow freight service.

It is reported that at the present time there is a shortage in poultry netting. The manufacturers have been improving the output of wire netting for screens and doors in order to avoid the shortage which developed last year.

Seasonable Goods.—There is still a good demand for seasonable goods; "unseasonable" goods, as the jobbers now call them, in view of the weather conditions prevailing. Garden tools are selling briskly and orders are now being placed for awnings, shades, verandah screens, hammocks, lawn seats and other strictly summer lines.

Household Goods.—The demand in all lines has been heavy. Enamelware is being taken up in large bulk. The demand for refrigerators is, if possible, heavier than before. Orders are coming along so briskly that there is now some speculation being indulged in as to whether a shortage will develop. At present stocks are quite sufficient to meet the demand.

Builders' Hardware.—The general 10 per cent. advance in brass goods has resulted in an increase in the United States in all builders' hardware into which brass enters. There has been some speculation as to whether the advance would be followed in this country but at present it does not seem at all likely that this will be done.

There is a heavy demand all around for builders' supplies. Despite the atmospheric handicap, the builders have been keeping steadily at work and the dealers have been experiencing a consistent demand for hardware.

Heavy Hardware.—The manufacturers have been keeping well up with the demand this year. The demand has been extremely heavy in some lines.

Sporting Goods.—The demand has suffered to some extent as a result of the rain. However, the jobbers are not expressing any anxiety on this score as they are anticipating a big trade as soon as "the clouds roll by." The retailers have not been as busy as they might have been had conditions been better.

KINGSTON OLD BOYS.

The annual dinner of the Montreal branch of the Kingstan Old Boys, was attended by about forty-five. The decorations were blocks of limestone, covered with moss and pansies. The guests of honor were Mayor Hoagg, of Kingston, and Prof. Adam Short, chairman of the Civil Service Commission, Ottawa, both of whom spoke. The following officers were elected:—President, Courtlandt M. Strange, director of Lewis Bros., Ltd.; vice-president, L. L. Henderson, manager of the Montreal Transportation Co.; sec.-treas., Hugh C. Walkem, insurance broker.

Catalogues and Booklets

Empire Stoves.

The Canadian Heating and Ventilating Co., Owen Sound, have issued their catalogue number five, showing their complete line of Empire stoves, ranges, furnaces and registers. It contains over 60 pages of well illustrated matter, printed on coated paper. The descriptions are full and to the point.

There is a department in addition devoted to a description of the various parts of stoves and specialties, such as kitchen sinks, open sink strainers, sink couplings, sink bolts, cast sink brackets, basin brackets, cesspool with bell trap, boiler stands, plumbers' pots, hot plates, sweephole doors and frames, pots, bowls, fry pans, etc.

Banner Stoves.

The Baxter Stove Co., of Mansfield, Ohio, are sending out their forteith catalogue and price list. It is a handsome catalogue of over 100 pages, with a three-color embossed cover. Illustrations and descriptions are given of the complete line of stoves and ranges of the firm. Tre descriptions give full details, which will be found of undoubted value.

Stencils and Signs.

Walker & Campbell, 93 Bleury Street, Montreal, have just issued an attractive little booklet explaining the steel, rubber and brass stamps, as well as the stencils and brass signs which they manufacture.

Champion Hardware.

A catalogue has been received from the Champion Hardware Co., of Geneva, O., formerly known as the Champion Safety Lock Co. It is interesting to note that they have more than doubled their line of manufacture since their last catalogue was issued, a fact which is fully attested by the complete assortment of builders' hardware lines shown in the catalogue now to hand. The list includes everything from casement adjusters to window sets, considering them alphabetically.

The catalogue is splendidly printed on coated paper, is fully illustrated and contains full information with reference to each article.

Abrasive Specialties.

The Pike Manufacturing Co., Pike, N. H., have sent out a catalogue showing their complete line of sharpening stones and abrasive specialties. From every standpoint it is most comprehensive, containing a great amount of valuable information on the score of the line manufactured, which includes all varieties of sharpening stones, wheels, files, engravers' chucks, feet warmers, etc.

Typographically, it is very creditable, a colored frontispiece being particularly attractive.

BUILDERS' HARDWARE TRADE.

Saskatoon, Sask.—Isbister & Pretty, hardware dealers, are making a logical advertising appeal for the trade in builders' hardware. They say:

"The right material means that your building will last longer, will look better and that it takes less work, which means less money to build it, and in many cases by getting exactly what is necessary for each purpose, that you will buy the best materials even cheaper than you would the other kind somewhere else.

"If you are thinking of building, let us figure with you before you decide, and if you have decided to build, let us give you an estimate before you buy."

NO HALF HOLIDAY.

Sarnia, Ont.—The retail merchants have decided to discontinue the half holiday during the months of July and August.

CURRENT NEWS.

Winnipeg, Man.—Three frame buildings, owned by Tees & Persse, and situated between Higgins Avenue and the Canadian Pacific Railway tracks, one block north of Main Street, were completely destroyed by fire, the loss being estimated at about forty-five thousand dollars, mostly covered by insurance. The buildings were used for storage purposes, and contained stoves and furnaces belonging to the Waldron Company, wire, the property of the Pittsburg Wire Fence Company, glass goods owned by the Hobbs Manufacturing Company, and general merchandise of the Tees & Persse Company.

Kamloops, B. C.—N. S. Dalgleish, dealer in hardware, has taken A. Sinclair, of Portland, Ore., in partnership.

Brownlee, Sask.—C. W. Gimby, hardware dealer, has sold to John Douglas.

TO ERECT WESTERN BUILDING.

T. R. Scarfe, president of Scarfe & Co., varnish manufacturers, Brantford, has just returned from a tour of inspection of their branch in Winnipeg, and reports conditions there in a flourishing condition. Business at this branch has grown to such an extent that their present quarters are inadequate to meet their demands, and while there, Mr. Scarfe secured property on which he intends to erect a building suitable for the Western needs.

CREDIT MEN MEET.

The Canadian Credit Men's Association met at Winnipeg for their second annual banquet the evening of May 16 and elected officers for the ensuing year. The change of officers was occasioned by the resignation of H. H. Piggott, who resigned from the presidency to enter into business on his own account. Mr. Piggott was late credit manager for the J. F. Ashdown Co., and has entered into the brokerage business under the firm of H. H. Piggott & Co. At the banquet a purse of $500 was presented to Mr. Piggott as an expression of good will from his associates among the credit men.

W. S. Fallis, western manager of Sherwin-Williams, was elected new president, and R. R. Wilson, of Campbell Bros. & Wilson, vice-president. Henry Detchson was re-elected secretary-treasurer.

The main address of the evening was by W. J. Healey, of the Winnipeg Free Press, on the subject, "The fight for fair railway rates."

CACTUS PAINT.

In Uruguay the cactus is utilized in the making of a paint which is very white and very durable. Visitors to that country often comment on the apperance of most of the buildings, which are white even in the dampest weather, and the explanation of this is said to rest in the fact that the coating is made of the sliced leaves of the common cactus, macerated in water for twenty-four hours. To the creamy solution lime is added, and when applied to any surface a beautiful pearly white (wash!) is produced.

LOOKS FORWARD TO PAPER.

Brampton, May 19.

MacLean Publishing Co.

"Enclosed please find subscription renewal to Hardware and Metal. I always look forward to receiving your paper on Saturday, and would not like to be without it."

W. E. Anthony.

Better Than Ever.

New Liskeard, May 21.

"We were much pleased with your last number. In fact, we think we have read Hardware and Metal with greater profit than any year heretofore.

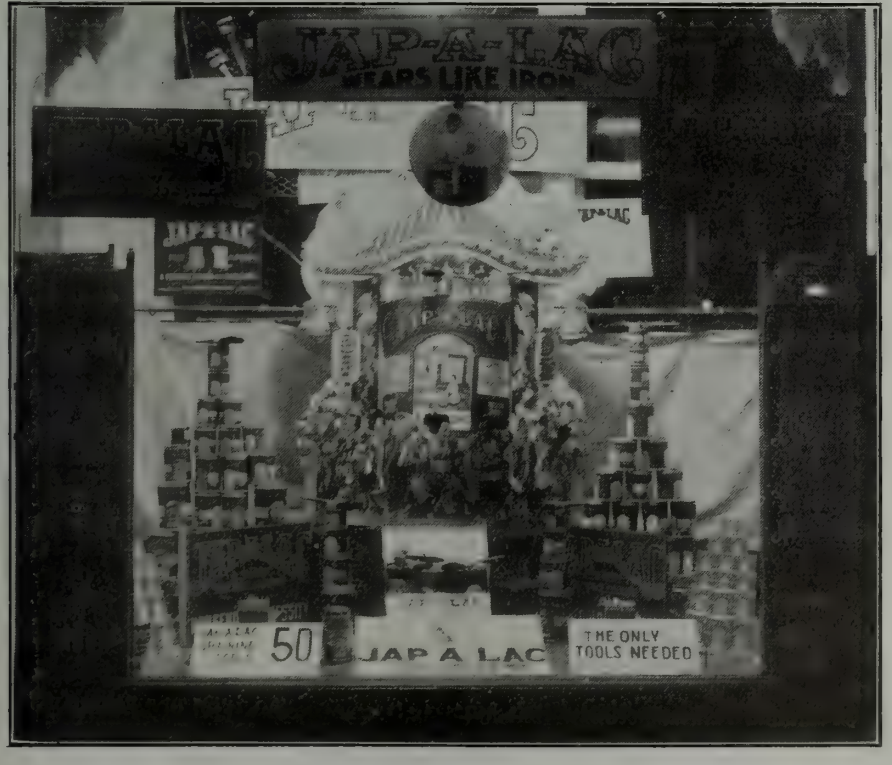
Yours truly,

MAGLADERY BROS.

Methods of Retailing Paints and Varnishes

Getting the Holiday Trade in Paint

Methods Adopted by Stanley Mills & Co., Hamilton—There is Always a Big Demand for Paint During the Week Preceding a Holiday—The After Demand is Frequently Nearly as Large.



It is necessary for the retail dealer to watch for special opportunities to feature certain lines. For instance, every holiday means a big demand for paint during the days immediately preceding and following it.

To some men, a holiday means an opportunity to get out and have a good time. To others—and they are probably in the majority—it means an opportunity to do whatever "fixing" is needed around the house. Practically al men devote at least some part of the day to work around the house—nailing up boards, putting up shelves, painting, etc.

This is a fact established by custom and the hardware dealer knows that he is going to experience a good demand for supplies during the week preceding th holiday. What a good many do not seem to know is that this demand could be increased very materially if an effort were made to feature the lines particularly required.

The average man is not noted for any degree of foresight in small matters. He may decide that he is going to spend the holiday in attending to the countless little jobs which his better half has been calling to his attention for the six months preceding. It does not occur to him, however, that he will need more nails, a new hammer perhaps, a saw, a can of paint and a brush. When he settles down to work on the holiday morning, the deficiencies in his supply of tools becomes apparent. "Thought this old brush would do," he muses, as he looks at the tattered and hardened specimen, which he has just resurrected from a dusty shelf. There is just a trace of paint at the bottom of the old tin, the young hopeful of the family has used up all the nails and the hardware store is closed for the holiday. There is only one ending possible. The man puts away his tools and goes downtown for the day.

Now if the hardware stores had been featuring up just such lines during the days immediately preceding the holiday, with cards in the window calling attention to the fact that they would be needed, the chances are that many men of the absent-minded variety would have found out what they needed ahead of time and invested in the same.

Window display in store of Kingan Hardware Co., Peterboro.—See next page.

How It Works.

To prove this point, reference may be made to the methods adopted during the past week by Stanley Mills & Co., Hamilton, in featuring paints for the holiday. The better part of a full page advertisement in the issue of Saturday, May 18, was devoted to reminding men of what they would need in that line for the work they intended to do, or should do, on Victoria Day. The introduction read as follows:—

> For some, next Friday will be a day of rest and relaxation; others will have some odd jobs around the home that they've been "saving up for the holiday," others will be moving to the Beach for the summer months, and still others will be traveling out of town. But remember, whatever be your needs, this is the store to rely upon for best service, dependable merchandise and low prices. This page shows clearly how well we've prepared to supply the wonderful variety of merchandise which will be called for next week.

A forceful talk on paint follows, under the heading, "Are you going to be a painter on the holiday?"

The use of the store windows for paint displays helped the good work along and the result was an exceptionally large sale of paint this week.

Other firms, who had followed along pretty much the same lines, report that they have found business this week to be exceptionally brisk and that the sales of paint have gone away up as a result.

The After Demand.

The fact should not be lost sight of that the demand does not stop with the holiday. There is always a good-sized after demand. When a man starts in to do work around his home, he frequently discovers other jobs which need doing and which he postpones for a short time. More often still, he runs short of material and has to wait until the next day to get more.

A dealer who did a large trade in paint and varnish around Good Friday makes the statement that at least half of the men who made purchases before the holiday came back for more within a few days after. "Some had run short before finishing their work," he explained. "Others had only intended painting a certain part of the house

but, when they saw what an improvement they had effected, they decided to do the whole house. My sales after the holiday were almost as great as before."

Although the holiday will be over when this is read, it would pay every dealer to endeavor to secure a big share of the after sales. A neat window display and a timely advertisement will serve the purpose.

Scarcity of Cars Has Affected Linseed

The Flaxseed is to be Had, but Difficulty Has Been Experienced Bringing it to the Crushers—What About Next Year?

A little time ago there was talk of the various boards of trade taking up the question of car shortage—and of of transportation difficulties generally. What would have resulted from an agitation so started, is of course a question, but hardware dealers in all parts of the country will shortly be made to feel that some such consideration of this carrying problem is needed. The present shortage of linseed oil, is, it is said on good authority, the direct result of the transportation difficulties. What will be the outcome of the present situation can not be certainly said, but if a higher price is struck, as many predict, then the hardwareman looking for a reason will have to glance back toward the railways.

Plenty of Seed.

How serious the present situation is may be understood from the fact that with oil bring a high price one mill has been forced to close. There is not the seed on hand necessary to keep the crushers going. And it is not that the seed is not in the land. The trouble is that the seed is in a part of the land where the crushers are not.

Somehow the railways seem never to have caught up with the demand made upon them. Last fall they had not cars enough to carry the grain from the prairie provinces; since they have not been able to bring in the remaining grain and all the other goods which awaited transportation. And now, in the spring of the year, the railways have carried such a small part of the required flax seed that the mills find supplies low. Consumption this year, has, of course, been much greater than last. It does not seem indeed that the railways have not carried as much as in the past, but rather that they have not been able to carry enough more than usual to meet the greater call. With mixed paint orders coming from all parts of the Dominion; with manufacturies working holidays and nights, it is not hard to realize that the call for linseed oil and so for flax seed is much greater than in other years.

Shutting Down on Sales.

So much do paint manufacturers need oil, indeed; and so uncertain are they of the supply, that they have practically shut down on sales of oil. Their customers can get oil from them, but they are not anxious to sell. They are not sure enough that "there will be more where that came from."

That a linseed oil famine is imminent does not seem likely—at least not according to the word of a man closely connected with the production of linseed. "We have had great difficulty getting seed," he said. "Our supply has been reduced, although we have not been in danger of closing. Now, however, the boats are coming through and we will have fresh supplies—perhaps not all we want, but yet supplies which will enable us to produce rapidly."

A Significant Statement.

Regarding the effect which the present shortage is going to have upon the price of linseed oil it is hard to get an expression of opinion. Grinders and handlers alike, however, state that $1 and $1.03 does not leave a fair margin of profit. Rather a significant statement that.

There are those in the paint and oil business who are content to take things as they come; but others there are who seek to look into the future. Now these are asking themselves some such problem as this: If transportation facilities were such this year that flax seed sufficient to enable a sufficient production of linseed oil could not be brought forward, what will happen next year? What will happen next year when it is expected the general crop needing cars will be greater than in 1911? What will happen when the general freight of this fast growing country will have increased? What will happen in face of a paint demand which shows every sign of increasing in size?

Can't Get the Cars.

That is a big problem indeed—a problem which the railways are undoubtedly trying to solve, but which seems likely to give them great trouble for the simple reason that they can not get cars fast enough.

But the future perhaps can take care of itself. What will happen now is the point which is of great interest to many dealers. Just what will happen is far from sure, but it seems likely that oil will continue high. That anything like a famine will arise is hardly to be expected.

A PRACTICAL DISPLAY.

Peterboro, Ont.—A good paint display has been shown in a window of the Kingan Hardware Co. It was dressed by H. J. Hanwell, who exercised great care in arranging and carrying out the details.

As the object of the display was to demonstrate the value of the varnish shown, it was to include some practical evidence of the results which can be obtained. Accordingly the floor of the window was used for that purpose. It was given two coats of ground color and a strip was left that way. The rest was given a coat of graining color, another strip being left. The remainder of the floor was varnished and grained. Thus the whole process was shown clearly. A card was then placed in the window calling attention to the work which had been done on the floor. The necessary tools for graining were also shown, with cards calling attention to them.

Kingston Hardware Notes.

Kingston, May 21.—W. B. Dalton & Sons have just completed a deal for the purchase of the Ottawa hotel, at the corner of Princess and Ontario Streets, from the proprietor, James Norris, and will fit it up for a wholesale hardware. The firm will retire from the retail business, and go into the wholesale. The property they have secured is an ideal spot, as it is convenient to all the railways. The price paid was $10,000.

It will be remembered that the firm suffered a bad fire a few weeks ago, their fine big store on Princess Street being almost gutted. At the present time the firm have a store on Wellington Street, which is being used temporarily.

John McKelvey, Kingston's veteran hardware merchant, has been on the sick list for several weeks, but is now doing nicely, and will be back at work in the course of a few weeks. His partner, Samuel Birch, accompanied by Mrs. Birch, has returned home from an extended trip to Atlantic City, N.Y. Mr. Birch is much improved in health as a result of his trip.

The plumbers' strike, which started on May 1st, has not yet been settled, and as a result, some of the hardwaremen have been put to a great deal of inconvenience in getting out their work. The men have been getting $2.55 for nine hours, and they are asking $3 for an eight-hour day. The bosses had a great deal of the rush work on vessels done before May 1.

MAPLE LEAF WINS

Carry M-L Paints and 'win out.' It makes good with your customers. A full line—full of profit for you. Indoor and outdoor finishes—flat walls colors—varnishes.

DELIGHTED! IT'S M.L. PAINT.

KING'S PLATE WINNER

The historic race run at the Woodbine Track in Toronto last Saturday is just another example of the fact that quality wins.

The thoroughbred quality stock back of the Dyment colt "Heresy" was the winning beginning. After this came the superior training of the colt by men who knew their business. The result was the production of a plater that won handily.

The Hardware Dealer, who would " win out", must plan his race in advance. He must make a winning beginning by selecting lines of tried and proved quality,—lines backed with thoroughbred pedigree.

We are in the race—not for the King's Plate, but for the Favor of Discerning Merchants—men who know that thoroughbred qualities in a product win custom and keep custom.

The thoroughbred qualities of Lowe Brothers "High Standard" Liquid Paints are easy working qualities, fineness of texture, greater and more uniform covering power and durability.

"Heresy" won Saturday, but the Paint with the "Little Blue Flag" wins favor every day for "High Standard" Dealers.

Weekly Market Report --- Paints

THE UPWARD TREND.

Advances and rumors of advances have featured the paint and oil market this week. Oil and turpentine have advanced. A rumor of an advance in white lead has been contradicted, but it shows the tendency there. It is now stated that an advance in prepared paint is coming.

Through it all business continues wonderfully brisk. The manufacturers can barely meet the demand.

MONTREAL.

Montreal, May 23.—With metals soaring, and with linseed oil so scarce that handlers are advising their travelers not to sell, the paint situation becomes speculative. Will a rise in mixed paints be the result? A careful consideration of past events and of present conditions leads to the belief that such a rise will come—will, moreover, come shortly.

Only a fortnight ago white lead was advanced—an advance which resulted directly from the high price of pig lead. Now there has come an advance in linseed oil, and a flaxseed scarcity that makes future advances seem likely. Labor, too, is high, and rent has reached almost an unheard of height.

All these things make it seem necessary that there should be a higher price put upon mixed paint.

Oil Goes Up.

While the future of paint hangs in the balance, linseed oil has been put upon a new price basis. The price of this is of small consequence, however, for linseed oil is practically not upon the market. Concerns are husbanding their supply, for since production has been interfered with, none dare risk a famine.

The demand for paint and lead continues. The manufacturers are now facing a new difficulty, namely to secure cans. Some have exceeded their orders, and are having to call upon the manufacturers for greater supplies than these had been expecting to fill.

Linseed Oil.—While the coming of boats will likely bring relief shortly, there is yet great scarcity of flaxseed at the present time. Some of the mills have been forced to close, and for this reason supplies of oil are small. Paint houses have instructed their travelers not to push this class of goods; indeed, some are hesitating to fill even small orders. Prices generally are quoted at $1.00 and $1.03, but these are really nominal. An easier condition of this market may be expected. The present would not seem a good time to buy.

Turpentine.—There is an abundant supply of this commodity, and though the demand continues large, prices remain unchanged at .70 in barrel lots.

White Lead.—The recent advance is having no deterrent effect upon orders. Rather is the reverse true. Dealers appreciate that they are facing a period of high lead, and are ordering now to avoid paying the still higher price which it is predicted will come. Pig lead, upon which the price of white lead so largely depends, still continues on its upward course.

Putty.—Orders are large. Manufacturers are being hard put to it to keep up with the demand and to prepare for the larger demand which experience has taught them may be expected in the fall. There is a possibility that the next few weeks will see an advance here.

Glass.—For this time of year the demand is good. Dealers whose supply ran low during the winter and early spring are now taking advantage of the lower rates afforded by the opening of navigation, and are laying in good supplies. But the rush which may be expected when buildings near completion has not yet started.

Mixed Paints.—The demand is large—so large, that factories are working overtime. What will be the result if the price is advanced about ten cents—as seems likely—cannot certainly be said. It will hardly result in any falling off in demand, however, ten cents a gallon is not a great advance after all.

TORONTO.

Toronto, May 23.—The paint and oil situation is extremely interesting at the present time from many standpoints. Linseed oil is scarce and high, white lead may go higher. As a natural result, there is now some talk of an advance being declared in the price of prepared paint. The air is thick with rumors to this effect, and it would not cause any surprise if an advance were made.

"It is quite possible," said one local jobber. "The only thing preventing it, to my mind, is the fact that the manufacturers are too busy to pay much attention even to so important a question. They are working night and day to meet the demand."

Linseed Oil.—The local price has been advanced three cents, making it $1.03 for raw and $1.06 for boiled. This advance is due partly to the high price of English oil, mostly to the scarcity being felt here. While the shortage is not felt here as keenly as at Montreal, supplies are comparatively light and demand continues as strong as ever.

It is now stated with certainty that linseed oil will be high all summer, and it is not thought that the present price will be the high water mark by any means. Further advances seem not only possible, but highly probable. Since the last advance has been declared, reports of further advances on the English market have been received.

Advance in Turpentine.

Turpentine.—There has been an advance of 1 cent declared in turpentine, making the local quotation 71 cents. The price has been low recently, in view of market conditions, and the advance is probably due to an effort toward readjustment.

No Advance Yet.

White Lead.—The market received the report a few days ago of a further advance in white lead of 10 cents. This was promptly denied and the price is still $7.15. However, the widespread nature of the rumor and the fact that it received pretty general credence can be accepted as evidence of the way the market is tending. It seems reasonable to assume that there will be another advance in white lead and that before very long. The demand is brisk.

Glass.—Trade is exceptionally good for this time of year. Firmness is noted in regard to price.

Putty to Advance.

Putty.—Although the oft-predicted advance has not yet come, it cannot be far off now. The continued advances in linseed oil and white lead make an increased scale for putty obligatory. Present prices are:—Standard bulk in casks, $2.20; in 100-lb. drums, $2.40; in 25-lb. drums, $2.50; bladder, in barrels, $2.65. Pure putty prices are as follows:—Bulk, in casks, $2.50; in 100-lb. drums, $2.80; in 25-lb. drums, $2.90; bladder, in barrels, $3.

The Paint Situation.

Prepared Paints.—The rumor of an impending advance in prepared paints is received with no incredulity here. The high cost of white lead and oil has been making the market tend in that direction for some time. Just when the advance can be expected is impossible to say at present.

In the meantime business is extremely brisk. The manufacturers are being rushed to the limit to meet the demand.

MADE-IN-CANADA TRAIN

The only White Lead corroders and grinders and manufacturers of Paints, Varnishes, etc., to exhibit in Made-in-Canada Train are

BRANDRAM-HENDERSON LIMITED

Our exhibit, showing full line of B-H "ENGLISH" Paint, Varnish and Lead Products will be found in coach No. 2 of the train. The exhibit is in charge of Mr. Smith, of our Halifax branch. Booklets, color cards, etc., describing the various B-H products, will be distributed to all visitors at each stopping point throughout the Western Provinces.

You and your clerks are especially invited to our exhibit.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

HOW is your paint stock? Does it hang fire, and stick on your shelves?

The full margin of profit in your paint department can only be realized by handling a good clean-cut, quality stock, of known reputation and backed by common sense help in direct support of your business.

Feature **MINERVA PAINTS**—the famous British Brand, and watch your paint sales grow.

Ask any Minerva Agent for his opinion.

We will be pleased to supply their names on request. There are hundreds with daily increasing sales.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time during the winter months, NOW, to investigate the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

AN IDEAL BUNGALOW at $3,500

Those people who have ever erected houses only to find in the end that their plans were unsuitable and expenditures beyond the estimates, will be interested in an important task which MACLEAN'S MAGAZINE has undertaken in presenting an ideal type of bungalow which may be erected at a cost of about $3,600. A great many different styles were considered, but in the June number of the Magazine what is considered as the ideal style is presented together with exterior and interior illustrations, an architect's plan of the floors and a descriptive article. It is likely that many of these bungalows will be erected in Canada. Beyond question the style is most striking and it would appear inexpensive.

Paint Knowledge

and knowledge of paint cannot be obtained promiscuously or in a short time. It takes years of experience to *really know* paints so it will pay you to remember, that in offering you an agency for

RAMSAY'S PAINTS

we are offering you the result of seventy years experience, and knowledge gained by the close adherence to *one* principle—the making of "the right paint to paint right"

Let us put our agency proposition before you.

87 Years' Varnish Selling Behind this Dealer's Testimony

The following letter is from a house established 87 years—a house which, in its time, has seen plans for selling varnish for the dealer come and go. When such a house comes out with the statement that the "P & L" Line is the *best* proposition they have ever had from both *quality and selling standpoint*, that means best of not one or two lines but perhaps of almost every line of varnishes on the market. It is your opportunity now to profit by the 87 years' experience of this firm by investigating the Pratt & Lambert Proposition from every standpoint.

MESSRS. PRATT & LAMBERT Dec. 1st, 1911

Gentlemen: We want to say that your line is the **best** proposition we have ever had, from **both quality and selling** standpoint. Our future efforts, we can assure you, will be **centered** on the P & L Line.

Thanking you for your kind co-operation, we are,
Respectfully yours,
THE BOOTH & LAW COMPANY

There is no reason why you cannot duplicate the success of this and other Pratt & Lambert Dealers in all parts of the United States and Canada. Pratt & Lambert advertising is creating the same kind of a varnish selling demand. This Spring this demand should be greater than ever, owing to the tremendous Pratt & Lambert Spring Advertising Campaign. Do not let this Spring go by without at least investigating what we can offer you in increased varnish sales and profits.

FACTORIES:— BRIDGEBURG, CANADA NEW YORK BUFFALO CHICAGO LONDON PARIS HAMBURG

The use of an absolutely pure Linseed Oil in the manufacture of paints and varnishes is all-important. In order to obtain an oil of such purity, The Sherwin-Williams Co. manufactures its own.

THE BEST SEED

THE selection of Flax-Seed is of first importance in the manufacture of pure Linseed Oil. We use nothing but the Choicest Seed, cleaned and recleaned, eliminating the foreign substances.

THE BEST OIL

WE are, in consequence of our exclusive "Screw Press Process" of crushing the seed, our methods of filtration and ageing, able to produce a Linseed Oil of guaranteed quality. It is *this* Oil which forms the foundation of S-W Prepared Paints and Varnishes, making them much appreciated by Dealer and Consumer alike.

The Discount Discounts The Terms

Glidden

Discounts

Don't be deceived by the salesman who talks terms instead of discounts.

Ask yourself this question:

Isn't the argument that some salesmen make of long terms after all a cheap argument?

Remember, eventually you pay the bill.

N. B.

Never turn a Glidden salesman away. He talks Discounts—and Discounts make profits.

UNDOUBTEDLY you can get longer terms from other varnish houses, but you can't get as good a discount, and *the discount discounts the terms.*

Read that sentence again and think it over.

If profits are what you are looking for, you must get the discount or you are cheating yourself. Could any terms you ever heard of—two months, three months, six months, or seven years induce you to cheat yourself?

That Glidden discounts are the best, *you* can demonstrate. That Glidden Green Label Varnishes, Endurance Wood Stains and Endurance Colorspar are the best, *we* can demonstrate.

That Green Label Varnishes, Stains and Specialties are most profitable to you, your customers will demonstrate.

Let us send you full particulars of our unequaled proposition to the trade.

GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure

finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

Do You Do Business Near The Water?

In other words, is there any boating or sailing done in your vicinity?

If there is, your customers will be needing varnish. This is what we want to talk to you about.

DOUGALL MARINE VARNISH is different from any other varnish made. It is prepared from a special formula, and contains ingredients which make it the most desirable for use on boats. It is very hard wearing. The sun will not blister it, it will not crack or peel, spray or wind will not affect it, and it will not turn white.

If you want your customers to get the very best obtainable recommend DOUGALL VARNISH.

Tell them that it is

THE VARNISH THAT LASTS LONGEST

The best varnish advertising you can put inside your store is this Berry Label.

It is the one label that the buying public KNOWS at sight.

It is the one that looms large in the pages of the leading magazines.

Wherever we advertise the varnish we show the label.

It has a trade-mark value that makes every Berry Can on any dealer's shelves a quick index to the high-quality standard of the store.

You can't put any better advertising than that in your store.

Berry Brothers' Business Builders

The Big-4 with which every dealer can most easily satisfy the quality-demands of his trade.

TRADE LIQUID GRANITE MARK
For finishing floors in the most durable manner possible.

For interior wood-work exposed to severe wear and finished in the full gloss.

ELASTIC OUTSIDE FINISH
For front doors and all other surfaces exposed to the weather

Berry Brothers, Ltd.

The World's Largest Varnish Makers
WALKERVILLE, ONT.

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

Not an Enterprise for the "Quitter"

"If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom

"He must know before he begins it that he must spend money—lots of it.

"Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

"Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

CANADIAN AGENTS:
H S Howland, Sons & Co., Toronto; Stark, Seybold, Montreal; Wm. Stairs, Son & Morrow, Halifax.

Learn wisdom by the follies of others

Many dealers dazzled by the prospect of a big first profit recommend a certain article regardless as to whether or not that article will give a customer the greatest possible satisfaction.

This short-sightedness has proved fatal to many a dealer. Unless a customer is thoroughly satisfied, your chances for his future trade are small; but the greater his satisfaction the surer you are of his steady trade.

It's the cumulative value of a sale that counts—that's why.

It pays to sell the FORD

Auger Bit in preference to all others. It gives **maximum** satisfaction every time in every way. Your profit may not be quite as large on the first sale —**but sure repeat sales** will boost the total profit way over and above **that** obtained by "One time—large profit" sales.

If you, Mr. Dealer, are following on this latter plan in your Auger Bit trade, just try pushing the **Ford**, and note carefully the result. It will convert the occasional buyer into a steady customer and make every buyer a satisfied customer.

Dealers who have tried this know it to be a fact. Will you be the next?

Write us for catalog and circulars.

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.

The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

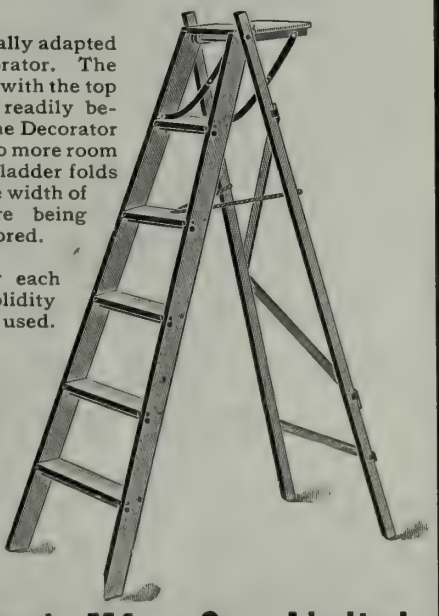
WHY BUY THE NEAR BRAND WHEN THE BEST IS PROCURABLE?

LAMP BLACKS

L. MARTIN CO
81 FULTON STREET
NEW YORK U.S.A

WHY NOT SELL THE DECORATOR STEP LADDER?



It Pays Good Profits and Gives Satisfaction

This ladder is especially adapted for use by the Decorator. The Shelf is nearly level with the top step and folds down readily between legs so that the Decorator with shelf takes up no more room than without. The ladder folds compactly within the width of the risers, therefore being easily carried or stored.

A rod passes under each step, assuring solidity and the rope lock is used.

Shelf is extra.

Put this ladder in stock at once—The result will surprise you.

Write for complete catalog on ladders.

The Stratford Mfg. Co., Limited
STRATFORD - - CANADA

This Mark is the Ensurance Of LAMPBLACK QUALITY

Consistent High Quality has so increased the demand for our Lampblacks that we have been forced repeatedly to increase the size of our plant. We are now the World's Largest

Manufacturers of Pure Lampblacks, and aim to retain the same good quality as before.

1 lb Germantown Lamp Black

Before placing your next order, write for OUR samples and prices. After this we are confident of your trade. BETTER WRITE NOW.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

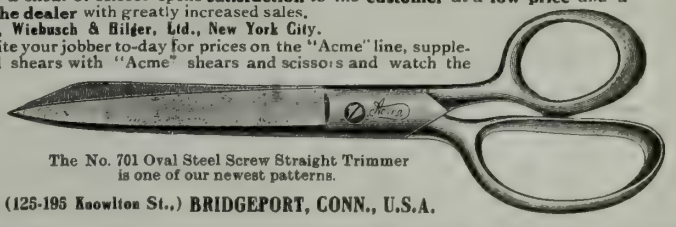
"ACME" are the strongest and sharpest low-priced Shears and Scissors on the market.



Why were 15,000 pairs of Acme Shears sold daily 5 years ago; and why are 30,000 pairs of Acme Shears sold daily to-day?

Because "Acme" on a shear or scissor spells **satisfaction** to the **customer** at a **low price** and a **handsome profit to the dealer** with greatly increased sales.

Special Representatives, Wiebusch & Hilger, Ltd., New York City.

MR. DEALER: Write your jobber to-day for prices on the "Acme" line, supplement your high-priced shears with "Acme" shears and scissors and watch the gratifying results.

Jobbers should write for our W-2 Catalogue, illustrating the most complete line of shears and scissors manufactured.

Canadian Selling Agent: - - - D. G. ROSS, 17 Bleury St., MONTREAL

Get the Local agency for "Safelock" Wire Fence

You will find "Safelock" the best selling line of fence you ever handled, because you can prove by actual demonstration that it really is the strongest fence made.

Look at this little cut—note how the stay wires interlock where they wrap the strand wire. You simply cannot make a "Safelock" stay slip in any direction. And, as the strand wires are not kinked, at the lock, every wire retains its full strength.

Better write us to-day about getting an exclusive "Safelock" agency for your locality

Only 20 lbs. Pressure Required

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

Hustling Hardwaremen
are selling
3. V. Crimp Roofing

because they are proud of its appearance and know their customers will always get value.

Our literature gives reasons and prices.

Winnipeg Ceiling and Roofing Company

P.O. Box 2186 H. - WINNIPEG, MAN.

DUST BREEDS DISEASE

Daily is that fact becoming known to a number of people who sweep without the aid of a dust quelcher or disinfectant. These are the people, Mr. Dealer, to whom you can sell

SOCLEAN

THE DUSTLESS SWEEPING COMPOUND

It is a scientifically prepared compound that makes sweeping possible without raising dust, saves scrubbing, kills the dust and germs, brightens up carpets and rugs, keeps floors neat and clean.

Put up in handsomely lithographed pails to sell at 25c. up to $1.00

Order direct

SOCLEAN LIMITED, Toronto, Ont.

The Originators of the Dustless Sweeping Compound of Canada.

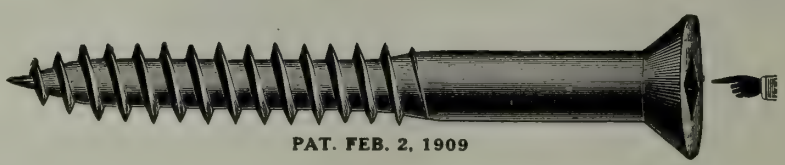
No Wasted Time When You Sell ROSS RIFLES



So good is their reputation that all you need to do is to show your customer your samples of "Ross" Rifles, and if he really is in the market his choice is soon made.

By the way, many dealers have not yet any Ross .280 (High Velocity) Rifles. Don't forget that not only is this rifle absolutely the best sporting rifle made and the best rifle value offered, but moreover every sale means a tidy profit to YOU.

WRITE US FOR DISCOUNTS, ETC.

ROSS RIFLE CO. - QUEBEC

ROBERTSON SOCKET HEAD WOOD SCREWS

Have a decided advantage over other styles of wood screws. By having a square hole, into the centre of which a specially designed screwdriver fits snugly, it does away with all possibility of slipping, which often proves disastrous to the screw, and wastes a considerable amount of the workman's time.

They will sell on sight—get our prices at once.

We also manufacture high-grade Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.

Amatite ROOFING

"BEST ROOFING WE HAVE"

IN 1907 the Robb Engineering Co., Limited, of Amherst, N.S., covered one of its buildings with Amatite Roofing. Now, Amatite has a mineral surface which needs no painting, and so in 1908 and 1909, this Company paid no attention to its Amatite roof. If any other ready roofing had been used, they would have been expecting to find that a coat of paint was needed. In 1910, they still did not paint it, although by this time a second coat would have been due if ordinary roofing had been used.

Not long ago, the Robb Engineering Co. wrote to us in response to an inquiry as to how the roofing was getting along:—

"Gentlemen:—Referring to our Amatite Roofing, we examined a few days ago the roof covered with this material in 1907 and are pleased to advise that we think it is the best roofing we have around our premises, and as far as we are able to speak from experience with it during the time it has been on, we would not hesitate to recommend it.

(Signed) A. S. ROBB, Superintendent."

Amatite has not been on the market many years, but regarding the roofs which were laid in the early days, we are now receiving many letters like the above. The fact that Amatite needs no painting is very important, for it means that the maintenance cost is nothing. This saving would justify us in charging more for the Amatite than the usual price for ready roofing, because it's worth extra money not to have to paint it. Amatite, however, is lower in price than other roofings of the same grade. Use it and after a few years you, too, will say, "it is the best roofing we have."

Sample and booklet free on request. Address our nearest office.

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Be a good Indian—be a promoter of good fellowship among hardwaremen. Every dealer and salesman who handles **CARBORUNDUM SHARPENING STONES** is eligible to become a brave in the great tribe. Write for an Application Blank. Make your plans now to spend your outing at the big Indian camp on the banks of the Niagara, July and August. It will be a heap big time. A postal to the Great Sachem will bring the details.

Be sure you have a complete stock of Carborundum Goods, the demand is growing every day.

The Carborundum Co., NIAGARA FALLS, N.Y.

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.

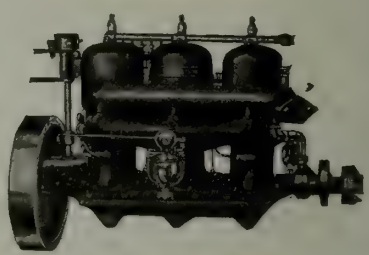
Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

Canada Cement Customers COME BACK

THE dealer who **features** Canada Cement—instead of simply **carrying** it—will quickly build up a brisk trade in one of the fastest growing and most profitable lines he can handle.

OUR National Advertising has aroused a keen demand in all parts of Canada for Canada Cement. Your Cement customers will also buy other articles from you and Canada Cement will increase the prestige of any store, because it is sure to give satisfaction.

THE great advantage in selling Canada Cement is that you will sell the same customer over and over again. The first sale to a man may be small, but he is so certain to be satisfied with his first experience that he will soon decide to build a concrete barn or silo or root cellar and will come back to your store for a larger order of Canada Cement.

WE help our dealers in many ways. Our National Advertising and big prize contests are constantly creating new customers all over Canada. We keep our dealers posted on all enquiries that we receive from their Territory. Handsome steel enamelled hanging signs are sent free to all merchants handling Canada Cement. Our Free Information Department is always glad to answer all questions from dealers or customers. This information service is in charge of experts who have made a study of the use of concrete on farms, and is proving invaluable to both dealers and their customers. You can readily see the advantages of being able to offer your cement customers the free assistance of these experts in planning improvements of concrete.

All this means greater profits for our dealers. Are you one of them?

If not, write us for particulars.

Now It's Ice Cream Freezers

Summer weather brings Ice Cream Freezers into special prominence and the retail merchant will make no mistake in ordering his supply at once. It is just as easy to get the cream of the trade by being well prepared with saleable sizes of good Freezers as it is to wait until the last minute before ordering.

The Size to Suit Your Trade

Some merchants have a demand for the larger sizes of Ice Cream Freezers, others find that the small sizes are better sellers. Our stock consists of strong, attractive, easyrunning freezers that can be depended upon to give lasting satisfaction. Sizes run from the small 1 quart Freezer, perfectly finished, to the large 20 quart machine.

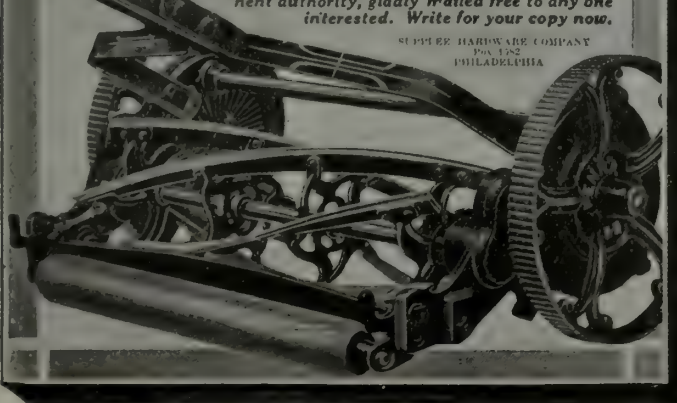
Easy-Driving, Smooth-Running and Almost Noiseless "PENNSYLVANIA" *Quality* Lawn Mowers

HAVE SELF-SHARPENING CRUCIBLE TOOL STEEL BLADES THROUGHOUT

THESE oil-hardened and water-tempered blades are made from the same kind of steel as used in all tools requiring a keen-cutting edge. The lipped-edge stationary blade is so constructed that it gradually wears away, sharpening both itself and the revolving blades in the process. This self-sharpening feature enables a "PENNSYLVANIA" to soon pay for itself.

Another unique feature of "PENNSYLVANIA" mowers is their long wheel base operated by a train of gears on both sides, which insures smooth work over the most uneven lawns.



"PENNSYLVANIAS" are best for every class of work. They'll last longer and do more work with less labor than any other mower on the market.

For *permanent* lawn mower satisfaction, insist upon "PENNSYLVANIA" *Quality*—for 30 years in a class by themselves. Ask your seed-man or hardware dealer.

MAILED FREE ON REQUEST

"The Lawn—Its Making and Care," an instructive book written for us by a prominent authority, gladly mailed free to any one interested. Write for your copy now.

SUPPLEE HARDWARE COMPANY
P.O. BOX 1582

Connect your Store Windows with our Advertising and see the Goods Move

Tear this page out Fill in and return

YOUR store window is the link that connects the goods on your counter with the consumer's demand. By displaying AutoStrop Razors advantageously you *cash in* on our big national advertising.

To get the best results from your window space the information asked for below is necessary. Our window dressing experts can then send you schemes which will be most appropriate for your use.

1. Dimensions of window: Height.....Width.....
   Depth (from front glass to back of window floor).....
2. Is floor of window finished, or does it need to be covered up? .....
3. How long will you probably be able to keep this display in your window .....
4. Can you distribute booklets, circulars, etc., with your name and address on them, advantageously, if we supply you?.....
5. Will you be likely to advertise in local newspaper at time of display? .....If so, tell us size space, single or double column, and we will send you electrotype. Can you use it?.....
6. Who is the proper person to correspond with regarding these matters? .....
7. Please give full shipping instructions for sending the display matter.

Name .....

Address .....

After filling out the above form, mail it to

AutoStrop Safety Razor Company, 400 Richmond Street West, Toronto

AutoStrop SAFETY RAZOR

STROPS ITSELF **STROPS ITSELF**

This Window Sells AutoStrop Razors

How to Get it

AN attractive window display like the above makes AutoStrop Safety Razors **move.** You can readily see why.

If you carry AutoStrop Razors in stock, just fill out the blank form on opposite page. We'll send you a window display that is designed for **your own window**, and will make your AutoStrop Safety Razor business very profitable.

If you do not carry AutoStrop Safety Razors, send us a trial order, and take advantage of this valuable window display service. Send us the form on opposite page, properly filled out, with your order, and we'll send display with the goods.

Call your store "The AutoStrop Depot." That idea catches on. Sell AutoStrop Safety Razors on thirty days' trial; we are behind that offer. You needn't worry about return goods. They'll prove too few to be considered.

You'll find you can build up your razor business to a new high-water mark if you'll just let us help you. Will you do it?

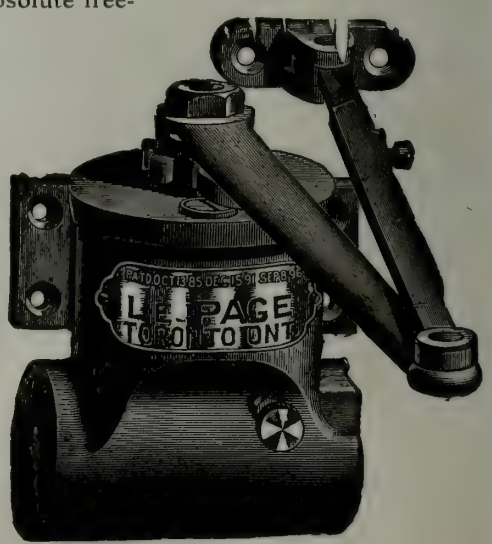
LOWER DOOR CHECK

The "LE PAGE" Patent OIL DOOR CHECK and SPRING

is a marvel of simplicity and has a mechanical action that is perfect.

It is the only door check made without packing in its working parts, which assures absolute freedom from packing friction.



The door on which this device is used cannot slam, as the oil in the spring cup of the check forms a cushion, which keeps the door under perfect control and allows it to close quietly.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumbscrew at the right.

The bearings are long and the spindle, with crank at lower end, is drop-forged from cold rolled steel.

Toronto public schools, Simpson's, Eaton's, etc., use this door check exclusively.

Write for circular and prices.

Free If You Are Not Satisfied

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

THE LOOP-LOCK ROPE BUCKLE TIE

"A New Tie That Will Sell Quickly"

Dealers who do not know the **Loop-Lock Rope Buckle Tie** should make it a point to get acquainted at once.

It has been designed and manufactured, after a careful study of the ordinary tie, with an aim to cover defects.

Makes an **adjustable** and **Sure-Lock Tie Rope** which can be fastened at any point along the rope, making a loop that **cannot slip, give or loosen.**

This Loop-Lock Buckle is most simple Has no springs or snaps about it. Will not rust. Tin Plated. Made of **Malleable Iron.** Will last a lifetime.

The rope used in these ties is the best grades of MANILLA, BRITISH MANILLA and SISAL ROPE. The rope is tight or hard laid and not the cheap and loose quality that is commonly sold.

The LOOP-LOCK TIE is made to be reliable at all times and with all animals.

A GOOD ROPE TIE is worth much in times of emergency. A poor one is dangerous, uncertain, and soon wears out.

THE LOOP-LOCK TIE is a good insurance.

Write for prices and full particulars to-day.

Good profits await you.

The Wedding Present Trade Campaign

Hardwaremen Should Lose No Time in Preparing for This Profitable Trade—Most of the Purchasing is Done by Women — It is Necessary, Therefore, to Make the Store Bright and Attractive—The Necessity for Good Display Measures—Two Creditable Window Trims.

The advent of June means more than the commencement of the summer season. June is the month of marriages, the period of the year which seems universally picked upon for the ceremonial culmination of human romance. The first Wednesday of the month sees more matrimonial contracts signed than are consummated during any of the other eleven months of the year.

As a natural sequence, June is also noted for a shortening of pocket books in the purchase of wedding presents. Every marriage means on an average the purchase of, say, twenty-five gifts. To bring matters down to a practical, statistical basis, let it be assumed that in a town of five thousand people, there are twenty marriages during the month. That means five hundred wedding presents to be bought and probably five or six dealers to share in the trade.

When this article is read, the month of June will have started. It will not be too late, however, for the hardwareman to begin an active campaign to secure just as large a share of the wedding present trade as aggressive methods can assure. The long suit of the average person is procrastination, especially when it comes to buying presents. At least half of the wedding gifts are purchased on the day preceding the happy event and are then sent up post haste. There is still time, therefore, for the dealer who has not already begun his campaign to make a bid for the early month marriage trade.

START AT ONCE.

In two or three days the June weddings will start. The demand for wedding presents has already manifested itself. The hardwareman who has not already inaugurated his campaign, should not delay an hour, therefore. Start next week off right with a series of window displays, a rearrangement of the store stock and strong advertisements in the local papers. The resultant trade will justify the efforts put forth.

Appealing to Ladies.

At the outset, there is one essential fact which must not be lost sight of. The great bulk of wedding gifts are purchased by women. Men are only too glad to leave the bother of selecting the gifts to their mothers, wives and daughters. "You know what will suit better than I do," they protest. "I'm too busy anyway. You run down town and look after it." In any case, it is safe to assume that even if the man does do the buying, some member of the sex, variously termed fairer, weaker and deadlier, will be along. The womenfolk are loth to entrust a mere man with the onerous task of picking a wedding present alone.

Now every hardwareman knows that women like to shop in stores which are bright and attractive. If the hardware store is dark and dingy, they can be counted upon to go to the jeweler's every time. Quite a number will do that anyway—unless the hardware dealer takes some steps to get their interest aroused.

Make the Store Bright.

The first step in the campaign, therefore, is to clean up the shop. A regular old-time cleaning bee should be instituted, every member of the staff being pressed into service from the proprietor to the office boy. Re-arrange the stock, bringing the attractive and seasonable lines to the front. If time permits, give a coat of varnish or stain to the fixtures, walls and shelves. The store will look fresh and wonderfully improved after you are through.

Put Goods to Front.

The articles which particularly appeal to the purchasers of wedding gifts should be put prominently in the front of the store. Stock the showcases with silverware, cutlery, brass and nickel-plated ware, cut glass and similar lines. Use the windows for attractive displays. In fact, arrange the stock so that persons entering will be struck not only with the varied assortment of

lines shown but also by the general attractiveness of the premises. In that way only can the trade of the women be secured.

It has very wisely been said that the dealer should change his stock and store around as much as possible. This is certainly one of the seasons when a change will be found profitable. Move a silent salesman across the entrance where the contents will be plainly visible from the street; and flank it, if the equipment of the store allows, with other glass showcases, all loaded with the lines named above. This arrangement will to some extent do away with the necessity of removing other goods from the front shelves to make room for the wedding present lines.

Good Window Displays.

It is probably not necessary to enlarge on the necessity for attractive window displays. This need will be recognized by all. A good window trim will go a long way toward winning recognition for the hardwareman as the handler of all lines of desirable wedding gifts.

Two very creditable and attractive displays by Canadian hardware dealers are herewith reproduced.

The first one was trimmed by Charles McGibbon for the Peterboro Hardware Co., Peterboro. The picture does not show the upper part of the display which had many creditable features. The top was in the form of a dome, slanting backward and supported by pillars. Topping the pillars were arches made from buggy rims. The front arches were joined to those at the back by slats with iron hooks, from which were suspended butter dishes, biscuit jars and other articles. The base of the window had two steps, to give a better display of the goods shown. Shelves were placed between the pillars.

The color scheme of this display was purple and gold. The background, pillars, etc., were covered by purple, crepe paper and streamers. The base was covered with gold colored sateen.

Each article shown—and there was a handsome selection—was price marked.

The second display shown was dressed by D. E. Tait for T. S. Tait & Sons, Campbellford, Ont. The floor and background were covered with white cloth and the sides had a similar covering. Circles and ovals, made from heavy cardboard with green sateen covering, made a good background for the display of cutlery and plated ware. The sign "Gifts" was cut out of the same material as the circles but was covered with red cloth, this divergence in color lending a pleasing and striking effect. The window was trimmed with casseroles, bake dishes, tea sets, cake and bread plates as well as all varieties of cutlery.

Doubled Trade.

This window has certainly had the desired effect. Mr. Tait writes: "Our sales are the largest on record, exceeding those of a year ago by 100 per cent."

This display in the store of T. S. Tait & Sons, Campbellford, has increased sales 100 per cent.

A Matter of Display.

Catching the wedding present trade is very largely a matter of display. The store which shows the most attractive line of goods is very likely to capture a large share of the trade. Windows are a big consideration in this respect, of course, but it is equal,y important that the greatest care should be taken in the matter of displaying the goods within the store.

Find Out Beforehand.

It is sometimes well to find out beforehand what marriages are "coming off." This information can easily be obtained in towns and cities of smaller size. Possessed of this information, the dealer is able to gauge the probable demand for wedding gifts and to base his operations accordingly. He can also form shrewd conclusions as to who are likely to be buying presents for these events and to do a little canvassing as occasions arise.

The following items are taken from the issue of June 4, 1892:

"The E. & C. Gurney Co., Toronto, have presented two boilers to the Y. M. C. A., Kingston, for the new building. They are valued at $600."

* * *

"Paints are still in good demand and dealers say the trade is as good as at this period last year."

Editor's Note.—Mark the difference in tone to that adopted in the trade nowadays. To acknowledge nowadays that trade in any line is only as good as at the same period of the previous year is to a lack of success, amounting almost to failure.

* * *

"Rice Lewis & Son are the holders of the contract to supply the hardware for the new Ontario building now far on in course of construction in the Queen's Park in this city. The award, which was made a few days ago, put an end to a little exciting suspense among several first class houses in both this country and the United States."

After Hanging of Crane Come Many Purchases

The Wise Hardwareman is He Who Makes an Effort to Secure These—They Mean Immediate Profits, Yes; but, More Than That, They Mean Many Future Sales—Kitchen Ware, Paper Bags for Cookery, Tools for Reducing Refractory Doors to a State of Obedience, These and Many Other Things Will be Needed by the Home-comers.

After the bride, falteringly, and the groom in manly tones, have said: "I will"; after the last bag of confetti has been thrown, and the last "new relation" embraced; after the honeymoon has been completed, and the groom's pocketbook depleted, the newly weds will return home to rest. "And faith they will need it," as Mr. Kipling would remark.

The newly weds return home to enjoy what they think will be a little respite from the fatigue of travel, but they find that they face work of another sort. It doesn't much matter with what care the groom has prepared the home before the wedding, there are going to be a lot of things to do when the bride arrives. If there really isn't any thing which needs doing the bride will think there is—and that, of course, amounts to the same thing.

Home Coming the Big Event.

Oh, the home-coming of the newly weds is no tame event. It is not an anti-climax. It is the apex of a series of big events. All along the trip it was that home-coming which was the leading subject of conversation. Turning from an inspection of Carnegie's home on Fifth Avenue, that bride and groom would brazenly discuss their own self-contained house—or their own modest apartment. They would see nothing incongruous in this.

Anything to make that home more homelike or more comfortable is going to find favor in the minds of the happy young people. For the house they will spend money freely. Any man who displays something which is wanted for that house will make a sale to the newly weds. He moreover may make friends with them, which will be still more valuable to him, for that will mean many future sales.

The Merchant's Opportunity.

Undoubtedly the home-coming of the newly weds is the merchant's opportunity—and to none is the opportunity greater than to the hardwareman. He, perhaps more than any other retailer, can offer things required in the home. It is to him that the bride turns when she needs something for the kitchen. It is to him that the groom goes when he needs a hammer to help him hang the picture which mother-in-law painted at the age of sixteen. He may wish mother-in-law had waited until she was older to do the painting, when, perhaps, she would have been too busy with other things; but whatever he wishes in his heart, he gets the hammer and drives the necessary nail.

To set down any list of the goods which the newly weds are likely to need would be well-nigh an impossible task. The best thing a dealer can do, perhaps, is to recall his own experience. If there is a clerk in the store who has recently been through the mill he might be brought into consultation—as a sort of alienist. It might even be a good plan to hold a conference. Different men will have had different experience, and there is wisdom in the council of many.

What Lines to Push.

The goods once decided upon, it is then necessary to bring these forward in some attention-compelling way. Picture wire, hangers to fit over the moulding—these perhaps need not be displayed. Nor need nails or tacks. Even the most unsophisticated bride or groom will know that these may be bought at a hardware store—at any hardware store. It is the lines which the dealer believes he can furnish better than his neighbor—the lines which he can supply at a better price—which he would do well to push to the front.

Take pots and pans, for instance. Thanks to the kitchen shower—the originator of which should be put upon the Calendar of Saints—many brides start housekeeping fairly well equipped with utensils. But the home-coming is often made earlier than was expected. Suppose the bride comes from a distant city. Her pots and pans—to say nothing of her dresses and other paraphernalia of minor importance—will not have arrived. What is to be done? Up speaks the husband: "We can buy a pot or two," says he; "we will likely need them later on any way."

Where Display Counts.

And the purchase is made, that dealer who has an attractive display of these goods being more than likely to get the sale.

And when the product of that kitchen shower does arrive it will be found that certain articles have been overlooked. There will be two frying pans and no potato masher. There will be no coffee pot. There will be no pot suitable for porridge. More need of purchases.

Then some knives will be needed. Perhaps a kind friend or relation will have attached his card to some solid or plated goods. That is likely—but kitchen knives and forks, the commoner spoons are often overlooked. They are necessary, too. So are egg beaters, soap dissolvers, toasters—a hundred and one things. Let the hardware man make up a table of these, and he will sell something every time a newly wed comes near his store.

A Chance to Push the Bags.

Then, when cooking is just being started, there is a great opening for the paper bag. These, for one thing, obviate the necessity of making new purchases to take the place of the tardy pots and pans. Possibly the bride has used paper bags before. Possibly she has only read of them, but she is quite willing to experiment. If the hardware dealer draws her attention to these by window displays, by advertising, or by sensible explanations of their use when he is making a sale of some other article, he will place many bags; and a bag in the hand of a customer means that many more will move from the dealer's shelves.
